Flint EM dates (financial emergency declared in December 2011)

Mike Brown, apptd 12-1-11 (when fin emer declared under PA 4 of 2011)
Ed Kurtz, apptd 8-8-12 (when PA4 was repealed in Aug 2012, Brown couldn't serve as EM, PA 72 back in effect)
Mike Brown, apptd 7-4-13 (Kurtz retired; PA436 in effect)
Darnell Earley, apptd 10-8-13 (Brown resigned)
Gerald Ambrose, apptd 1-13-15 (Earley appointed DPS EM)

Financial Emergency resolved, 4-29-15 (RTAB apptd)

Other dates

June 26, 2012 – Letter from EM Brown to DWSD seeking permission to blend river water with DWSD water (attached).

Sept. 20, 2012 – Letter from EM Kurtz to DWSD requesting written permission to implement blending (attached).

March 25, 2013 – The Flint City Council endorses joining KWA (see url below)
http://blog.mlive.com/newsnow_impact/print.html?entry=/2013/03/flint_city_council_approves_re.html

April 11, 2013 – Treasurer Dillion sends letter to EM Kurtz (attached) noting conditional approval of move to KWA (pursuant to PA436), pending a review of DWSD's last, best offer.

April 16, 2013 – EM Kurtz informs Treasury that the City will join KWA (attached).

April 17, 2013 – DWSD transmits letter to EM Kurtz terminating service to Flint, effective April 17, 2014 (attached).

April 17, 2014 – Water service from DWSD officially ends.

FYI.

I just received this from Natasha regarding the City's request to reconnect to DWSD.

The City is asking that the RTAB consider this tomorrow. I am in the process of sending this to the Board.

It appears that the City is planning on taking the $2M from Fund Balance.

Subject: Flint RTAB

Only two media outlets (flt journal and weyi TV) at today's meeting.

All went fairly smooth with the RTAB unanimously approving the two resolutions in question (in addition to several others dealing with other financial issues).

Only 2 people made public comment...one of whom was councilman Eric Mays who shared his typical "stuff."

No other real issues etc.

Let me know if you have any questions.

> > ***DEQ Director Dan Wyant today made the following statement as he announced DEQ Chief Deputy Jim Sygo will immediately assume the role of interim chief of the department's Office of Drinking Water and Municipal Assistance:***

"It recently has become clear that our drinking water program staff made a mistake while working with the City of Flint. Simply stated, staff employed a federal protocol they believed was appropriate, and it was not. The water testing steps followed would have been correct for a city less than 50,000 people, but not for a city of nearly 100,000.

As details of the situation emerge, I am convinced our program staff believed they were doing their job right. As the state recognized there could be a health threat to Flint residents, we took appropriate steps. We are now embarked on an unprecedented effort to safeguard Flint residents and families with near-term, intermediate and long-term actions to protect and educate city residents.

The issue in DEQ is experience and protocol with respect to corrosion control. The Governor has called for an independent, third-party after-action review. I have taken the step of changing leadership in the division. We are working with our federal partners and committed to being part of the U.S. EPA's effort to strengthen its Lead and Copper rule.

All who brought this issue to the department deserve credit for bringing it forward. Lead is a serious issue, particularly for young people, and we take it seriously. The Governor's plan incorporates the suggestions outlined by the EPA and researchers at Virginia Tech.

We will learn from this. We will make necessary changes to see to it that our program becomes a national leader in public health protection."

KEY MESSAGES:

1. It is increasingly clear through internal review at DEQ that staff overseeing drinking water mistakenly applied the wrong federal protocol when the city of Flint switched to the Flint River.

2. Today's announcement of new leadership in that division aligns with the states goal: make sure the public health is protected in Flint and elsewhere in the state, and ensure we learn from this so it never happens again.

3. The governor's action plan continues to protect kids and families in Flint, with the switch back to Detroit water last week, free water filtration for all city residents, and inspection of all Flint schools for lead exposure.

4. Flint families who are concerned are encouraged to take advantage of free home water testing through the city and blood lead level testing for children.

Sara and Dave,

Not Responsive

Would you guys mind providing a response to this and also the Dems calling for Wyant to step down yesterday? Gov. Snyder holds the power to make this decision, so I'd like to know if he would consider doing this as the state evaluates how it handled the Flint water situation. Thank you.

Progress Michigan: MDEQ's Wyant Needs to Go

The Flint water crisis shows a lack of leadership at the MDEQ

LANSING — In the wake of the Flint water crisis, where children across the city were poisoned with high levels of lead in the drinking water, Progress Michigan is calling for the ouster of the head of the Michigan

Department of Environmental Quality, Dan Wyant.

Recent reports show that Wyant and the MDEQ were warned by the Environmental Protection Agency as early as February that lead was leaching into the water pipes in Flint due to the corrosive nature of the Flint River water. Gov. Rick Snyder's emergency manager made the switch from Detroit water to Flint River water.

"You can't simply reshuffle some staff at the department to make up for poisoning thousands of Flint children. When families and kids are told their drinking water is safe and it's actually filled with toxins, someone needs to be held accountable. It starts at the top with Wyant," **said Lonnie Scott, executive director of Progress Michigan.** "He needs to resign immediately or Gov. Snyder needs to quickly show him the door. This crisis was allowed to fester and grow under his watch and Wyant needs to go. Families in Flint deserve to know that Gov. Snyder is taking this problem seriously and is willing to take serious action."

Subject: state money for detroit water

Sara:
I was at a City Council meeting last night when Flint City Administrator Natasha Henderson said the state has only wired Flint $2 million of the $6 million approved by the state Legislature.
She said the city has been told it will receive an additional $2 million in January and another $2 million in April.
Henderson said she's asked that the money be sent immediately because the city was required to pay Detroit the entire $12 million upfront, before the water was reconnected, and its water and sewer fund balance has dropped significantly as a result.
Several council members also spoke about this, and Council President Josh Freeman called the payment plant "beyond ridiculous" given the city's financial position.
Is there someone who can talk to us about this?

Subject: state money for detroit water

Sara:
I was at a City Council meeting last night when Flint City Administrator Natasha Henderson said the state has only wired Flint $2 million of the $6 million approved by the state Legislature.
She said the city has been told it will receive an additional $2 million in January and another $2 million in April.
Henderson said she's asked that the money be sent immediately because the city was required to pay Detroit the entire $12 million upfront, before the water was reconnected, and its water and sewer fund balance has dropped significantly as a result.
Several council members also spoke about this, and Council President Josh Freeman called the payment plant "beyond ridiculous" given the city's financial position.
Is there someone who can talk to us about this?

So sounds like based on conf call that was just had, that for some reason the city did indeed agree to all up front.

Clearly don't want to throw city under the bus as that's certainly not going help situation, but since having them do that to us as has already started, please see below bullets. Fact based and shows state's immediate action to again help address. Work? Any concerns or changes?

- The initial agreement and understanding was for monthly payments.
- Unbeknownst to the state, the city entered into an arrangement for one upfront sum and payment.
- Now that we are aware of this and have confirmed that final arrangement, the state is taking steps to immediately wire the money to the city. They should have all of the state funds within a business day or two.

Please weigh in ASAP.

Thanks much,
SW

Ok, Ron, here's our update and response.

Our understanding of the original plan and agreement to re-connect with GLWA-DWSD called for monthly payments from the city. Unbeknownst to the state, the city entered into an arrangement with GLWA-DWSD for one upfront sum and payment.

We want to help ensure that there are absolutely no complications or interruptions in Flint residents receiving water from GWLA-DWSD, so we are taking steps to immediately wire the remaining money to the city now that we are aware of, and have confirmed, this final arrangement. They should have all of the state funds within a business day or two.

Thanks for checking in and flagging this.

Best,

So glad you dropped a note again, Nancy. Have no idea how missed this earlier – apparently a flurry of emails all the same time.

The task force has full independence and our administration has pledged full and complete cooperation. It will operate as transparently as possible and there are expected to be opportunities for public input. The goal and mission is to conduct a thorough independent review of decisions and practices at the state, federal and city level concerning water in Flint.

The task force isn't a public body (it doesn't make policy and doesn't govern anything). They're a group of dedicated professionals who have volunteered to conduct an outside investigation of an issue and report recommendations and findings to the Governor. We fully plan on sharing that.

Thanks and best,
SW

Please help. We're confused by the part of my statement that directly addresses the concerns raised by Rev Bulloch was omitted from the story.

Rev. Bulloch says: "There doesn't seem to be a sense of urgency around responsibility and accountability" for Flint's water emergency, Bullock said.

The omitted part of my quote says: "The task force expects to complete its work within three months. It would be premature to take any action until after the task force submits its report."

Leaving this out appears I was dodging the question. I instead addressed it head on. Can you please add that important detail to the story?

Thanks,

Dave

Subject: RE: change agent consortium

We had a good, respectful meeting with a small group from Flint that included pastors, concerned residents and Councilman Mays.

Gov. Snyder has assembled a third-party task force that includes respected experts in public health, water management and environmental protection for an unbiased review of all actions of the city, state and federal governments regarding water use and testing in Flint.

That task force is expected to look at what occurred as well as make recommendations for what should happen moving forward because we believe that Flint residents need clean, safe water. The task force expects to complete its work within three months. It would be premature to take any action until after the task force submits its report.

Meanwhile, the Department of Environmental Quality and the Department of Health and Human Services continue to work with city leaders, educators and residents to continue testing and carrying out other aspects of the governor's action plan.

All Michigan Families Encouraged to Learn More, Reduce Lead Exposure in Homes

LANSING, Mich. – Nearly half a million children in the United States have elevated blood lead levels that could cause significant damage to their health, estimates the Centers for Disease Control and Prevention, and more than 3,000 Michigan children test positive for lead poisoning each year. Elevated blood lead levels in children is based on 5 micrograms per deciliter or higher.

In response to recent elevated blood lead levels detected in some Flint children, as well as in support of National Lead Poisoning Prevention Week October 25-31, the Michigan Department of Health and Human Services is working to raise awareness and education around childhood lead poisoning prevention across the state.

"Awareness is the best defense against lead poisoning, and unfortunately in Michigan, we know that we still have too many children exposed to lead," said Dr. Eden Wells, Chief Medical Executive with MDHHS. "By making parents and

caregivers aware of exposure hazards and teaching them safe cleaning and remediation practices, we can go a long way toward ensuring that children don't suffer lifelong health impacts from lead poisoning."

Levels in some Flint children increased after a 2014 change in water source. To address this, MDHHS is continuing to offer free NSF-certified water filters to residents and supporting the actions of the Genesee County Health Department. Further, an action plan to test all at-risk children in Flint is being implemented in partnership with local providers, health plans, and community organizations.

Major sources of lead exposure to U.S. children include lead-based paint and lead-contaminated dust in deteriorating buildings. Children can also be exposed to lead from additional sources including contaminated drinking water, take-home exposures from a workplace, and lead in soil.

This year's NLPPW theme, "Lead-Free Kids for a Healthy Future," underscores the importance of testing your home, testing your child, and learning how to prevent lead poisoning's serious health effects. Parents can reduce a child's exposure to lead in many ways, including:

- Get your Home Tested. If you live in a home built prior to 1978 or before you buy an older home, ask for a lead inspection.
- Get your Child Tested. Even if your young children seem healthy, talk to your healthcare provider about testing them for lead.
- Get the Facts. For more information, contact the Michigan Childhood Lead Poisoning Prevention Program at 888-322-4453 or visit www.michigan.gov/lead or www.michigan.gov/leadsafe.

Sara-

Wanted to update you on a couple of potential stories that you could see over the weekend.

First Nancy Kaffer of the Freep is writing a column for Sunday to do with Flint and the choice of KWA over DWSD. She had FOIA'd a doc from MEDQ that had a 2013 report from Andy Dillion that says that KWA is a risky proposition and that DWSD was a better option. I let her know that the report was just a starting point in the process and as more information became available a joint decision was made by the EM, council and other key city leaders.

Not Responsive

Thanks.

Please see below and attached release per brief convo at senior staff. Sill no exact word on timing of blood lead level data from DHHS – hopefully by late this week.

DEQ also has video that they'll be using for some footage of the testing with TV stations. Link here: https://youtu.be/Amy4cDW7RtA

Freeman Elementary water testing shows lead exposure limited to fixtures

Experts release water testing results on schools and homes in Flint

As part of Gov. Rick Snyder's action plan for Flint drinking water, the DEQ today released water testing data from nearly 400 homes and businesses in Flint as well as comprehensive sampling results from Freeman Elementary School.

Both sets of data indicate the problems with lead are localized to individual buildings or even individual faucets, rather than system-wide issues.

"The results from this data underline the need for water testing at all homes, businesses, schools and other buildings in Flint," said George Krisztian, the DEQ's Flint Action Plan Coordinator. "Problems with lead exposure appear to be localized to individual service lines or plumbing fixtures, and we want to see all families in Flint take advantage of free water testing from the state."

Freeman Elementary testing results
At Freeman Elementary, 31 faucets were tested using a series of four samples each. Twenty-two outlets did not show elevated lead exposure, but nine faucets came back with initially high results.

Those nine outlets involve brass components, indicating the problem involves the fixtures or plumbing immediately surrounding the fixture. When the faucets and fountains were operated for several minutes, lead levels fell significantly, in some cases to non-detectable levels.

Additional testing designed to look deep into the school's plumbing did not suggest larger, systemic issues.

Freeman Elementary has several options for remedying the issues at these nine faucets and fountains. The school can elect not to use those particular fountains, or implement a formalized flushing regimen. The sampling results indicate that for all but one tap, a 3- to 4-minute flushing period each morning would drastically reduce lead exposure.

For a permanent solution, the school should opt to replace the faucets and fountains of concern.

"The safety and health of our students are our primary concern at Flint Community Schools, so we will start work as soon as possible to replace faucets, aerators and other related components where high lead levels were detected," FCS Superintendent Bilal Tawwab said. "Once those fixes have been made, the DEQ has offered to provide additional testing of the water at Freeman Elementary to ensure the water from every sample is safe for our students. Flint Community Schools appreciates the efforts by the DEQ, working with all stakeholders to make sure our water continues to be tested and that our students have access to safe, clean drinking water."

For Freeman Elementary's complete sampling results and more information about how sampling was conducted, visit www.michigan.gov/flintwater.

The DEQ and the DLARA also have conducted sampling at other Flint schools, and results will soon be available on the DEQ's website. Additionally, the state will test every other school in the Flint Community Schools district, as well as any school or daycare in the city. Interested schools and daycare centers should contact George Krisztian at krisztiang@michigan.gov.

Homeowner and other customer-requested testing results
Results from the 381 samples from homes, businesses, schools and other facilities that took advantage of free water testing through the state showed similar, localized results. More than 75 percent of the samples analyzed demonstrated lead results of 5 parts per billion or less, and more than 91 percent demonstrated lead results of 15 parts per billion or less.

This data suggests that while some homes experience elevated lead level results due to lead service lines or in-home plumbing, many other homes experience little to no lead. This can make it difficult for homeowners and businesses to predict their lead exposure.

"Since it's not easy to predict if an individual home's water is at risk for lead, the best thing all residents can do is get their water tested," Krisztian said. "It's a free test that provides valuable information for families."

Testing is available for free by contacting the Flint Water Plant at 810-787-6537 and pressing 1, or by emailing flintwater@cityofflint.com.

For more information about water samples received through the state's free testing program, visit www.michigan.gov/flintwater.

How school sampling was conducted
To conduct this comprehensive sampling, the DEQ and Michigan Department of Licensing and Regulatory Affairs began on Oct. 23 with a thorough plumbing assessment of the school to gain a comprehensive understanding of how water moves through the building and what types of plumbing materials are used. The assessment also identified 31 faucets or fountains in the school that provide water for drinking, cooking and/or food preparation.

On Oct. 24, the DEQ and DLARA took four, 125-milliliter samples from each of the 31 identified faucets and fountains. The first two samples were taken immediately after turning on the faucet, followed by a 30-second flush and then the third sample, followed by a 2-minute flush and then the fourth sample. These samples

provided information on the impact of any lead sources in or around each specific faucet and fountain as well as its connecting plumbing.

On Oct. 31, the DEQ and DLARA took an additional 30 samples, 10 each from three sites in the school. These 1-liter samples were taken consecutively, and provided information about the impact of any lead sources deep in the building's plumbing.

Subject: FW: Flint water school testing results - 3 PM

Saw Dave was on this but since he's on the road, thought you should definitely see as well. DEQ is planning to issue at 3 p.m.

This is the first I've seen a draft but Dave may have been looped in on the back end. Looks ok and pretty thorough to me. If you need help trying to track any background info down let me know. Happy to reach out.

Subject: Re: Recall

Part of the Democratic process, Paul - we respect that. The governor is going to stay focused on tackling the issues facing our state and Michiganders with relentless positive action and to keep moving Michigan forward. On Flint water, the governor has outlined a detailed multiple step action plan for both immediate, mid and long term, and appointed a task force doing a very important job of reviewing all actions. They are a bipartisan group of people of the highest integrity, experts in their fields and widely respected who are going to do a very thorough, objective review.

Hi there Nora –

Not Responsive

On Flint water, we haven't been served yet so can't comment on specific details. What would say is that we're focused on moving forward and ensuring public health and clean, safe drinking water. The governor has outlined a detailed multiple step action plan for both immediate, mid and long term. He has also appointed a task force doing a very important job of reviewing all past actions. They are a bipartisan group of people of the highest integrity, experts in their fields and widely respected who are going to do a very thorough, objective review.

Good and all set? Just let us know if anything more needed at all.

Thanks and best,
SW

Residents of Flint, Michigan, to Sue City, State over Lead in Drinking Water

Natural Resources Defense Council, ACLU of Michigan Start Legal Process to Stop Ongoing Violations of the Safe Drinking Water Act

CHICAGO (November 16, 2015) – Residents of Flint, Mich., together with the ACLU of Michigan and the Natural Resources Defense Council, today announced their intention to sue state and city officials for ongoing violations of the federal Safe Drinking Water Act amid the city's widespread lead-contamination crisis. A lawsuit would force officials to address repeated, systemic failures to follow federal rules designed to protect the public health from dangerous levels of lead exposure.

"The community of Flint is strong and united in our commitment to repair the harm lead exposure has inflicted on our children and families. We are taking a stand so that our community can heal the damage that has been done and work together so that justice can prevail," said Pastor Allen Overton, a leader of the Concerned Pastors for Social Action.

"This action is about holding the government accountable for failing to protect the public health of an entire community," said Anjali Waikar, an environmental justice staff attorney at the Natural Resources Defense Council. "This case also highlights a troubling trend in which the government is willing to cut costs at the expense of its most vulnerable citizens," Waikar said.

"In their short-sighted effort to save a buck, the leaders who were supposed to be protecting Flint's citizens instead left them exposed to dangerously high levels of lead contamination," said Michael Steinberg, legal director for the ACLU of Michigan. "Not only were the city and state's actions dangerous and misguided. They were illegal, too."

Dangerous amounts of lead leached out of the city's pipes and into the drinking water of Flint's homes and schools for more than a year following a decision by Flint officials to eschew Detroit's water supply in favor of using the Flint River as the City's primary drinking water source. Not long after the switch, residents began to complain about the smell and discoloration of the water and, later, physical ailments stemming from the tainted water.

Officials working on behalf of Flint insisted for several months that the water was safe. However, water tests conducted by experts from Virginia Tech proved those assurances to be wrong, and a study by a local pediatrician that showed that the proportion of Flint kids with elevated blood lead levels had doubled since the City switched water sources. After officials could no longer deny that the community's drinking water was contaminated, Michigan Gov. Rick Snyder finally conceded that Flint should stop using the river water and return to the Detroit water system.

Despite this move, though, city and state officials have continued to violate federal legal requirements for monitoring and sampling tap water for lead, notifying the public about water-testing results and maintaining corrosion control from Flint's lead pipes.

"So much irreparable harm has been done as a direct result of the failures and lack of oversight perpetrated by the City of Flint and Michigan officials who are the very people we relied on to keep us safe. This lawsuit gives me hope that this will stop and no other city will have to endure the physical, property, and emotional damage that Flint residents have," said Melissa Mays of Water You Fighting For, a Flint-based organization.

There is no safe level of lead exposure. The toxic effects of lead on virtually every system in the body, and particularly on the developing brains of young children, are well documented. It can also contribute to high blood pressure and other health problems in adults. Even low levels of lead in the blood have been shown to affect IQ, ability to pay attention, and academic achievement, effects that are irreversible.

The Notice of Intent to Sue was served on behalf of Concerned Pastors for Social Action, an association of religious leaders from Flint; Melissa Mays, a Flint resident; the ACLU of Michigan; and the Natural Resources Defense Council. The groups assert that since April 2014, the City of Flint and Michigan state officials have failed to monitor and control for lead in Flint's drinking water and maintain a program to assist Michigan schools with lead testing and remediation, in violation of the federal Safe Drinking Water Act. If City of Flint and Michigan state officials – including Governor Rick Snyder and Dan Wyant, Director of Michigan Department of Environmental Quality - do not remedy violations under the Safe Drinking Water Act within sixty days, the groups intend to file a lawsuit in federal court.

Flint and state officials have known since 2011 that choosing the Flint River as a drinking water source could result in lead contamination issues, due to its highly corrosive properties. Yet state and city officials insisted that the water was safe to drink - even after testing found dangerously high lead levels in some residents' tap water. Citizen concerns about high lead levels were dismissed by state and city officials as "near hysteri[cal]" and "irresponsible," despite well-established

evidence that there is no safe level of lead exposure, and that even low levels of lead in the blood have been shown to affect IQ, ability to pay attention, and academic achievement, effects that are irreversible.

The Notice of Intent to Sue is required under the Safe Drinking Water Act as a prerequisite to filing suit.

###

For nearly 100 years, the ACLU has been our nation's guardian of liberty, working in courts, legislatures, and communities to defend and preserve the individual rights and liberties that the Constitution and the laws of the United States guarantee everyone in this country. The ACLU of Michigan was officially established in 1959 as part of that mission.

The Natural Resources Defense Council (NRDC) is an international nonprofit environmental organization with more than 2 million members and online activists. Since 1970, our lawyers, scientists, and other environmental specialists have worked to protect the world's natural resources, public health, and the environment. NRDC has offices in New York City, Washington, D.C., Los Angeles, San Francisco, Chicago, Bozeman, MT, and Beijing. Visit us at www.nrdc.org and follow us on Twitter @NRDC.

November 13, 2015

Governor Rick Snyder
Executive Office of the Governor
P.O. Box 30013
Lansing, Michigan 48909

Governor Snyder:

I would like to provide you an update with some of the work we are doing in response to your letter on October 2, 2015 letter. I also have three requests of the state that are necessary to provide relief to the victims of the Flint water crisis.

First, Senator Stabenow, Senator Peters and I wrote a letter to the U.S. Environmental Protection Agency (EPA) asking for clarification on whether federal law permits states to use Safe Drinking Water State Revolving Funds (Revolving Funds) to finance the replacement of privately owned lead water service lines (attached). The EPA responded that the Revolving Funds can in fact be used for this purpose. My office immediately notified both your office and the Michigan Department of Environmental Quality of this fact.

Secondly, the three of us also wrote to Secretary Tom Vilsack requesting that the U.S. Department of Agriculture (USDA) provide greater clarification on the availability of "Ready to Feed" formula for recipients of Special Supplemental Nutrition Program for Women, Infants and Children (WIC) in Flint. Additionally, the letter asks to identify resources to improve the nutrition of Flint residents specifically as it relates to lead, because a certain diet can reduce some of the impact of exposure. The USDA is currently reviewing the letter.

Third, I have been working with the EPA on important revisions to the Lead and Copper Rule that would prevent a public health crisis like the one in Flint from happening again in other communities. I will be providing testimony at a meeting of the National Drinking Water Advisory Council next Wednesday, November 18 on what we have learned firsthand in Flint and the necessary improvements to the Lead and Copper Rule.

I will continue to pursue all of these avenues in order to find assistance for the people of Flint. There are, however, additional steps that need to be taken to remediate the damage done to the people of Flint due to the failures at the state government level, alongside the forgiveness of Flint's Revolving Funds loan debt if that becomes available. I urge state and local partners to work in coordination to fulfill the following requests.

- First, I request that the state of Michigan use its Revolving Funds and other state resources such as the rainy day and general funds to repair the damage done to Flint's water distribution system.

Due to the corrosive nature of the water, conservative estimates show there has been hundreds of millions of dollars of damage done to Flint's water distribution system. The damage to the system will increase maintenance costs resulting in higher rates for Flint water users, who already are burdened by the highest water rates in the state. Furthermore, the presence of over 15,000 lead service lines continues to threaten the quality of the water and creates the potential for future lead exposure through drinking water. As stated previously, the EPA has said that using the Revolving Funds for this purpose is allowed under federal law, and I request the state do so.

- Second, I request the state create a fund for ongoing assistance to the people of Flint to respond to the impacts of lead exposure.

The effects of lead are serious and permanent, with especially harmful impacts on young children and those with weakened immune systems. In discussions with health professionals, they have expressed the need for significant investments in the local health system in order to respond to the widespread exposure of lead to the people of Flint, including monitoring of future lead exposure. This fund should include support for, at a minimum, continuous health monitoring, early education programs, nutrition education, support services for children to succeed in school, and continued exposure prevention efforts. The investments we make now to combat the negative impacts of lead exposure will pay dividends in avoided costs in the future.

- Finally, I again ask that the state immediately reverse course and rescind Flint's obligation to provide $2 million for the cost of connecting to the Detroit water system and refund any money the city of Flint has had to pay.

Requiring a financially distressed city and its people to pay for the state's failures is an abdication of clear responsibility by the state. The state-appointed emergency manager was in charge of the city of Flint during the time that the decision to leave the Detroit system was made. The state – not Flint – created this water crisis, and the state needs to pay to fix it. The $2 million Flint spent to reconnect to the Detroit water system could be used for many other essential services in Flint, such as hiring policemen and firefighters, improving schools and maintaining parks.

In addition to state investments, I encourage the state to request assistance from federal agencies. They have extensive experience working with health, education and nutrition systems nationwide and could provide critical resources to state officials. Specifically, the Centers for Disease Control and Prevention has offered resources if the state requests it. I will work to support any efforts for federal assistance the state makes.

I look forward to working with the state and federal governments to not only provide clean drinking water to the people of Flint immediately, but also repair the damage done to the city's water system and give local health professionals the resources they need to combat the long term impacts of lead exposure.

Sincerely,

Dan Kildee

November 13, 2015

Governor Rick Snyder
Executive Office of the Governor
P.O. Box 30013
Lansing, Michigan 48909

Governor Snyder:

I would like to provide you an update with some of the work we are doing in response to your letter on October 2, 2015 letter. I also have three requests of the state that are necessary to provide relief to the victims of the Flint water crisis.

First, Senator Stabenow, Senator Peters and I wrote a letter to the U.S. Environmental Protection Agency (EPA) asking for clarification on whether federal law permits states to use Safe Drinking Water State Revolving Funds (Revolving Funds) to finance the replacement of privately owned lead water service lines (attached). The EPA responded that the Revolving Funds can in fact be used for this purpose. My office immediately notified both your office and the Michigan Department of Environmental Quality of this fact.

Secondly, the three of us also wrote to Secretary Tom Vilsack requesting that the U.S. Department of Agriculture (USDA) provide greater clarification on the availability of "Ready to Feed" formula for recipients of Special Supplemental Nutrition Program for Women, Infants and Children (WIC) in Flint. Additionally, the letter asks to identify resources to improve the nutrition of Flint residents specifically as it relates to lead, because a certain diet can reduce some of the impact of exposure. The USDA is currently reviewing the letter.

Third, I have been working with the EPA on important revisions to the Lead and Copper Rule that would prevent a public health crisis like the one in Flint from happening again in other communities. I will be providing testimony at a meeting of the National Drinking Water Advisory Council next Wednesday, November 18 on what we have learned firsthand in Flint and the necessary improvements to the Lead and Copper Rule.

I will continue to pursue all of these avenues in order to find assistance for the people of Flint. There are, however, additional steps that need to be taken to remediate the damage done to the people of Flint due to the failures at the state government level, alongside the forgiveness of Flint's Revolving Funds loan debt if that becomes available. I urge state and local partners to work in coordination to fulfill the following requests.

- First, I request that the state of Michigan use its Revolving Funds and other state resources such as the rainy day and general funds to repair the damage done to Flint's water distribution system.

Due to the corrosive nature of the water, conservative estimates show there has been hundreds of millions of dollars of damage done to Flint's water distribution system. The damage to the system will increase maintenance costs resulting in higher rates for Flint water users, who already are burdened by the highest water rates in the state. Furthermore, the presence of over 15,000 lead service lines continues to threaten the quality of the water and creates the potential for future lead exposure through drinking water. As stated previously, the EPA has said that using the Revolving Funds for this purpose is allowed under federal law, and I request the state do so.

- Second, I request the state create a fund for ongoing assistance to the people of Flint to respond to the impacts of lead exposure.

The effects of lead are serious and permanent, with especially harmful impacts on young children and those with weakened immune systems. In discussions with health professionals, they have expressed the need for significant investments in the local health system in order to respond to the widespread exposure of lead to the people of Flint, including monitoring of future lead exposure. This fund should include support for, at a minimum, continuous health monitoring, early education programs, nutrition education, support services for children to succeed in school, and continued exposure prevention efforts. The investments we make now to combat the negative impacts of lead exposure will pay dividends in avoided costs in the future.

- Finally, I again ask that the state immediately reverse course and rescind Flint's obligation to provide $2 million for the cost of connecting to the Detroit water system and refund any money the city of Flint has had to pay.

Requiring a financially distressed city and its people to pay for the state's failures is an abdication of clear responsibility by the state. The state-appointed emergency manager was in charge of the city of Flint during the time that the decision to leave the Detroit system was made. The state – not Flint – created this water crisis, and the state needs to pay to fix it. The $2 million Flint spent to reconnect to the Detroit water system could be used for many other essential services in Flint, such as hiring policemen and firefighters, improving schools and maintaining parks.

In addition to state investments, I encourage the state to request assistance from federal agencies. They have extensive experience working with health, education and nutrition systems nationwide and could provide critical resources to state officials. Specifically, the Centers for Disease Control and Prevention has offered resources if the state requests it. I will work to support any efforts for federal assistance the state makes.

I look forward to working with the state and federal governments to not only provide clean drinking water to the people of Flint immediately, but also repair the damage done to the city's water system and give local health professionals the resources they need to combat the long term impacts of lead exposure.

1. The Governor's 10-point plan for Flint recognizes the need to address lead service lines. We agree with Congressman Kildee and intend to work with the City of Flint, utilizing MI's Revolving Loan Fund program. We appreciate Congressman Kildee getting clarification from EPA that this money can be used for lead service line replacement. In fact, we've been working with Sen. Ananich and other legislative leaders to get these funds available to perform lead service line replacement.

2. The Governor's action plan addresses lead education and lead exposure. We will continue working with the city to educate its citizens and we will be making our lead exposure data available and take actions necessary to minimize risk to Flint residents from lead.

3. We appreciate the partnership between the state and local government to address the switchover to Detroit water. The State of Michigan, with support from the Legislature, provided $6 million in an agreed-upon plan with the City to contribute half of the necessary funding. Of the $6 million local half, it is important to remember the Mott Foundation provided $4 million. We want to recognize and sustain the partnership.

4. We look forward to the congressman's continued leadership to deliver federal resources to this issue.

Hi there Jacob –

Sure- and to be clear, we still haven't been served yet so can't comment on specific details.

What would say is that we're focused on moving forward and ensuring public health and clean, safe drinking water. The governor has outlined a detailed multiple step action plan for both immediate, mid and long term. He has also appointed a task force doing a very important job of reviewing all past actions. They are a bipartisan group of people of the highest integrity, experts in their fields and widely respected who are going to do a very thorough, objective review.

Just let me know if anything more needed at all. This is for comment on behalf of Governor and rest of our administration too.

Thanks and best,
SW

Subject: Flint blood level data

Good evening, MDHHS friends,

Here are suggested changes to the press release. I think it's vitally important to have our "people first" approach, and be very up front about the results. I also think it's important to show up high what we will do with this data. Please consider the changes. I also think it's worth a conversation about whether we want to release this on a Friday morning. This is a challenging situation to be sure, but I think these results are fairly encouraging considering some of the heated rhetoric on this issue.

Thank you,

Dave

FOR IMMEDIATE RELEASE CONTACT: Jennifer Eisner
DRAFT
(517) 241-2112

MDHHS releases October data outlining blood lead levels in Flint
Results show 24 of 963 people tested had elevated levels

LANSING, Mich. – Blood lead level testing results released today revealed that 24 of 963 adults and children tested in Flint in October had elevated levels, according to the Michigan Department of Health and Human Services.

MDHHS is working closely with the Genesee County Health Department to reach out to families testing with higher levels and help them reduce their exposure to lead sources.

Information was gathered from tests administered citywide to 963 children and adults between October 1 and October 30. Eighteen people age 17 or younger had elevated blood lead levels. Six adults over the age 18 were identified with elevated blood lead levels.

The report is intended to inform residents about blood lead level testing efforts in Flint and provide cumulative total numbers.

"Our goal is to help families reduce their exposure to lead sources," said Dr. Eden Wells, chief medical executive with the MDHHS. "We have made

progress in testing and identifying those with elevated blood lead levels, and the department will continue to work closely with county health department to reach these families. We will update these numbers on a regular basis and remain diligent in our ongoing outreach and education."

The data in the report include the total number of tests conducted and the total number of elevated blood lead levels greater than 5 micrograms per deciliter, and captures both capillary and venous blood tests. People who have had multiple tests are counted only once. The full report is posted online at www.michigan.gov/flintwater and will be updated as more data becomes available.

The testing is part of the state's action plan to address health concerns related to Flint's water infrastructure.

Last month, MDHHS collaborated with the county health department and local partners to distribute educational resources and informational letter to Flint parents regarding lead testing. GCHD nursing staff are conducting direct outreach to families when an elevated blood lead level has been detected, serving as an important resources by addressing questions and concerns, providing information, and meeting them in their home environment.

MDHHS continues to provide free water filters and replacement cartridges to Flint residents at four locations including the MDHHS Flint offices and the Genesee County Community Action Resource Department. For a full list of locations and hours of distribution, visit www.michigan.gov/flintwater.

To help residents properly install water filters, and to demonstrate how to replace the original when it expires, MDHHS has created an instructional on the MDHHS YouTube channel. For additional updates on Flint water including updates on blood lead levels and testing results, visit www.michigan.gov/flintwater.

Tom,
Thanks. I'd like to get such a table out to the Flint stakeholders; however, before doing so, the table probably needs to be modified to better reflect the comparison between Flint River and DWSD.

You may have already seen this (below) blurb from MLive. Also, I had a call from Jerry A. He indicated Veolia is coming to the same conclusion that it may involve tweaking of the process vs some major undertaking. We will know more next week.

I have also attached a table Wayne's & Jerry's staff put together. My sense is there is still this thought that hooking back up to DWSD is cost neutral or nearly so. Hopefully this table shows that is not the case. The info is consistent with we sent you the other day i.e., there is an estimated 30% rate impact.

FLINT, MI – A water quality expert who has spent years working with environmentalist Erin Brockovich is expected to speak at two events in Flint Saturday, Feb. 14.
Robert W. Bowcock, founder of Integrated Resource Management, met with Mayor Dayne Walling, Councilman Wantwaz Davis and others Friday, Feb. 13.
Bowcock said earlier this week that he believes small treatment and distribution adjustments could help fix some of Flint's water quality problems. He toured the city's water treatment plant Friday.
Walling declined to comment on his conversation with Bowcock, but city Councilman Eric Mays said he is anxious to hear his assessment and recommendations.

Davis said Bowcock was straightforward in giving his opinion that the city can cut back on some of the chemicals being used to treat water.

City spokesman Jason Lorenz issued a statement, saying, "The city of Flint honored a request for a tour of its water treatment plant submitted by Mr. Bowcock, as it has done with individuals and groups in the past.

"(Director of Public Works) Director Howard Croft and F-1 Licensed Treatment Operator Mike Glasgow guided the tour and answered all of Mr. Bowcock's questions. Tours of the Water Treatment Plant can be arranged by appointment for interested groups by calling 810-787-6537."

Bowcock is scheduled to join in a march for water quality through downtown Flint, which is planned to begin at 1 p.m. Saturday at Flint City Hall, 1101 S. Saginaw St., and end at The Durant.

Bowcock is also scheduled to speak at a forum at the Saints of God Church, 2200 Forest Hill Ave., Flint, from 3-4:15 p.m.

Brockovich, portrayed by Julia Roberts in a 2000 movie about her fight over the pollution of a California town, has been speaking out on Facebook about Flint's water issues for several weeks. Today, she posted a photo of Bowcock, Davis and march organizer Melissa Mays inside the Flint water plant, saying she was "so honored this community would seek my help ... and I am glad I could send Bob to get it done."

In addition to customer complaints about the price and quality of the water, there were several boil water advisories in Flint in 2014 and the city was found in violation of the Safe Drinking Water Act for excess total trihalomethanes in the water supply last year.

The city began using the Flint River as its source of drinking water in April after 50 years of handling only the distribution of already-treated Lake Huron water purchased from the Detroit Water and Sewerage Department.

Since that time, some citizens and members of the City Council have advocated abandoning the use of the river and purchasing lake water from the Detroit until the Karegnondi Water Authority pipeline is complete.

The city and Genesee County are partners in the KWA.

> Actually, my quick take is about 8%.
>
> Some background:
> When Flint left, the annual revenue profile for the Water System was initially reduced by $12.5 million, However, we immediately recalculated the rate for Genesee County (recognizing their higher demands), to effectively "claw back" about $2 million of the reduction, so the net Flint impact is ~ $10.5 million, or just under 2.5% of the (reduced) Water System rate revenue. Assuming that same amount could be replaced, and all else being equal, the "system rate increase" could be reduced by about 3 percent, with a bit more of the reduction occurring in the suburban wholesale rate structure. Safe to say that (again, absent any other changes) the average suburban water rate increase would be closer to 8 percent compared to the current 11.1%.

> > Nikki / Bart – don't need a hard and fast number on this. However, it would seem to me that in a fixed cost system such as water, if Flint were to be hooked up again at the $847K / month cited in Ms. McCormick's January 12th memorandum and after the release of the rates yesterday, bringing Flint back would – on a marginal cost basis –

serve to mitigate the wholesale (suburban) customer rate increase of 11.1% cited in yesterday's presentation. Without going into a whole lot of detailed calculations (unless necessary), what would the impact of the inclusion of Flint starting say on July 1, 2015 (hypothetical date) be on the rate increase presently now in the public? A revised increase of what – 10.6% - looking for a high level sensitivity analysis here. Can you help? RJD

From: Rauch, Randy (DHS)
Sent: Wednesday, February 20, 2013 3:18 PM
To: Yager, Steve (DHS)
Subject: Flint water bills

Steve,
I am wondering, if somehow, I could send a letter to the Governor regarding the water bills in the City of Flint. Effective 3-1-13, the City will now require a $350 service fee for turning on water to a home. Shut off accounts and new water applications. Plus a $75 deposit on top of that.
The fee was $100. This is on top of a change that took effect just a few months ago of increasing the water fee to $53 per month just to have water in the home. Then the usage is on top of that. This is the city managers way of trying to balance their budget.
People in Flint cannot afford this. DHS cannot afford this. It is hurting our SER funding and my CP/CP funding. People in Flint cannot live with these rates. I feel somehow the Governor needs to hear about this.
I have asked numerous times to meet with the City manager with no luck. My own Board member is an advisor to the city manager and I have asked him to set up a meeting and he has not.
What can we do to get the Governor's ear?

Randy Rauch
Child Welfare Director
Genesee Co. DHS

Both Dan and Andy believe that the discussions held in the past with DWSD and Flint have been contentious and not fruitful. What we are going to do is tell Flint that if they believe it is in Flint's interest they should sign and submit to Andy for his approval. Brom will tell them that. At the same time we will inform DWSD that this is happening and if they want to make a last attempt they should do so during the period of time that Andy is deliberating on his counter signature. Dan does not believe that DWSD has been straight and doesn't think they will offer anything and Andy concurs. Under any circumstances Flint will have to deal with DWSD on the present delivery system and that may create some negotiations but it's doubtful they will be significant.

We will encourage DWSD to make an attempt. We did call them together as recently as November to negotiate and those discussions were not successful. Andy and Dan will make one last effort.

As you know, the Flint people have requested Dillon's ok to break away from the DWSD. Andy has reviewed the proposed action, had it analyzed by Treasury and Dan Wyant and DEQ, and they all agree that Flint is correct. I have no way of determining whether this is the right action except to depend on the two departments charged with this responsibility, so I recommend that we support their determination and let the chips fall where they may. This will happen early next week, so we need to have you made aware and develop a message of support if that is what you want to do.

We'll need to make sure that Orr knows about this as soon as possible so he can take it into his calculations. It would certainly diminish the DWSD base, and probably spin off a series of political questions for others still involved in the Detroit system. But, I don't see how you can support Detroit to the detriment of the rest of the state. You've done a lot for the city, but you also need to have a strong support for outstate for 2014.

Sorry to bug you on your vacation, but the two emails today couldn't be avoided. I was trying to think of a way to make it up to you, so here goes: GO BLUE! (That was really tough to say…).

They have been notified per the plan and have until Andy returns next week to present their counter proposal. The concept is executed. Sorry for the confusion but they haven't followed up with Flint and I thought you should know we were moving to the next step at the end of the ten days. I was indicating that we were expecting to move forward in case you had further reservations and wanted us to delay further.

I think Ed should respond to McCormick. I wouldn't have reacted quite so negatively, but then that's me. I would encourage him to always stress that they are open to new proposals, but haven't seen one. But, I'm in no position to rewrite emails. I do think that a clean closure on both sides is warranted. It's not like KWA wouldn't still need a negotiating posture with DWSD.

What was Sue's response to the request for a last best offer? I take it she wasn't interested, or at least didn't feel that she could offer any more than previously done? Schenk's about as good as you can get in public life, so with Sue if they don't have an offer, I can't figure out what we can do more. I'm really surprised that DWSD hasn't responded with a final counter.

Sounds like the well is pretty poisoned (no pun intended).

Brom, did you receive the following email yesterday. I would like to contact DWSD, but would like to hear from the Governors office before I do. Ed

From: **Ed Kurtz** <ekurtz@cityofflint.com>
Date: Mon, Apr 8, 2013 at 10:25 AM
Subject: DWSD
To: Brom Stibitz <StibitzB@michigan.gov>

Brom, attached is a draft of a letter to Sue McCormick that I intend to email to her today, unless you have concerns with the tenor of the letter. We are just kind of tired of reading about "war" and "reckless" and "credible study" and new options in the media. Having said that, we still want to get the best deal for the people of Flint. Also, per our conversations last Friday, what is the status of the decision on our recommendation to go with KWA. Ed

I don't know who Fred the Engineer is.

I spoke to Brooks Patterson Sat night. He won't get in middle of this despite Det News story.

I think we need to understand if the legacy liability issue raised twice now presents a real risk to Flint. Also, Fred were you able to sort thru rate issue we discussed?

Thanks.

Andy

> Dear Mr. Dillon:
> The report produced, at your direction, by TYJT, indicated the most economical option for Flint water is to maintain a contract with DWSD. The KWA option will cost more money. Since some of the funds for the KWA solution will come from State grants and State Revolving Fund loans, that solution will cost me more money in the form of taxes. The best solution from the economic and engineering perspective is DWSD. A purely political decision that ignores economics is not in the public interest.

Ok to book during that window. Can it be in Detroit? This delay likely means Flint will be pregnant w KWA by then.

We let Kurtz come w he and two or three and DWSD Fausone w same # as Flint.

Also, invite Wyant and Key engineer. One from Tucker Young.

Dennis, I didn't send Governor report from DEQ (email I sent you) but will now. Is there a max # of people for this?

Subject: Flint

If Flint is going to go into some kind of regional authority, then we need to firewall the finances of water from the general city budget. How do we keep the city from using the water system as a cash flow tool? We need to help them avoid the problem that they have been guilty of in the past of capturing water monies from customers before remittance to the Authority and using it elsewhere.
I suspect that is the motivation behind their desire to split off from DWSD. If the monies go to legacy debt it will help Flint immeasurably, if general fund then they'll never get on top of the situation. Right now their legacy debt is higher than their wages for current employees and that is obviously unsustainable. I realize I'm not telling you anything you don't already know, just re-emphasizing.

Subject: RE: Flint water

Good gravy. First, just to clarify, when Valerie says GM is leaving, she means leaving the Flint water system, not abandoning the City altogether.

Second, to anyone who grew up in Flint as I did, the notion that I would be getting my drinking water from the Flint River is downright scary. Too bad the EM didn't ask me what I thought, though I'm sure he heard it from plenty of others. My Mom is a City resident. Nice to know she's drinking water with elevated chlorine levels and fecal coliform.

I agree with Valerie. They should try to get back on the Detroit system as a stopgap ASAP before this thing gets too far out of control.

Subject: Flint water

As you know there have been problems with the Flint water quality since they left the DWSD system, which was a decision by the emergency manager there. Specifically, there has been a boil water order due to bacterial contamination. What is not yet broadly known is that attempts to fix that have led to some levels of chlorine-related chemicals that can cause long-term damage if not remedied (though we believe they will remedy them before any damage would occur in the population). Now apparently the reduced quality is causing GM to leave due to rusted parts.

I am fairly sure that GM's departure now means the economic rationale for Flint leaving DWSD in the interim while the new intake is constructed has just been eliminated. Moreover, our DEQ has been working with Flint's team to try to address the technical problem, but doing a blend of DWSD water and Flint water, or going back altogether for a year or two while the new lake intake is constructed, have not really been solutions on the table.

Now we are getting comments about being lab rats in the media, which are going to be exacerbated when it comes out that after the boil water order, there were chemicals in the water that exceeded health-based water quality standards. I think we should ask the EM to consider coming back to the Detroit system in full or in part as an interim solution to both the quality, and now the financial, problems that the current solution is causing. That additional revenue would also help DWSD, obviously, and the infrastructure is already in place, so this could be implemented quickly. I am not sure who is the best person to initiate that conversation with the EM, but I see this as an urgent matter to fix.

--Valerie

P.S. Note:I have not copied DEQ on this message for FOIA reasons. I have sent them the below message from the Senator's office and had conversations with them re making sure to brief the EM directly on the water quality issues.

DWSD Fact Sheet

March 14, 2012

The Detroit Water and Sewerage Department (DWSD) is a department of the City of Detroit government. DWSD is governed by a seven-member Board of Water Commissioners (BOWC) whose members are appointed by the Mayor. Four commissioners, represent Detroit residents. Three remaining commissioners represent suburban wholesale customers with appointees from Wayne, Oakland and Macomb counties.

DWSD provides water service to the entire city of Detroit and neighboring southeastern Michigan communities throughout Wayne, Oakland, Macomb, St. Clair, Lapeer, Genesse, Washtenaw and Monroe counties. The 1,079-square-mile water service area, which includes Detroit and 126 suburban communities, makes up approximately 40 percent of the state's population. Wastewater service is also provided to a 946-square-mile area that encompasses Detroit and 76 neighboring communities. DWSD's water supply system is one of the largest in the nation both in terms of water produced and population served. The water system draws fresh water from the Great Lakes System, with Lake Huron to the north and the Detroit River to the south through 3 raw water intakes.

DWSD's water network consists of 3,438 miles of transmission and distribution mains within the City of Detroit, and 402 miles of transmission mains in the remaining service area. DWSD's five water treatment plants pump an average of 596 million gallons of clean drinking water each day. The Department is responsible for maintenance and repair of 27,244 fire hydrants in the city.

DWSD's sewer system originated in 1836, and today consists of 10 pump stations, five combined sewer overflow retention treatment basins, three screening and disinfection facilities and a total of 3,433 miles of sewer lines that carry rainwater and wastewater to the Wastewater Treatment Plant one of the largest single-site wastewater treatment facilities in the country. This facility treats an average of 707 million gallons of flow per day.

The Detroit Water and Sewerage Department, with 2,100 employees, has the fifth lowest combined water and sewerage rates per month among the 20 most populated cities in the United States. By law, DWSD can only recover the cost for provision of service, DWSD cannot make a profit. For the Fiscal Year (FY) 2011/2012 the allocated Revenue Requirement, for the Suburban Wholesale and the Detroit Retail customers: Water $355,857,000 and Sewage $464,622,300.

DWSD's July 2011 Capital Improvement Program totals approximately $1.3 billion over the next five years with approximately $216.50 million budgeted for water and sewer projects for FY 2011-12. The major projects in the Capital Improvement Program include replacement of aging water mains in Detroit; water meter replacement and automatic water reading equipment installation; rehabilitation and upgrades to water and wastewater treatment plants, pumping stations and reservoirs; rehabilitation or replacement of sewer lines and outfalls; construction of combined sewer overflow control facilities to ensure that sewer systems effectively handle storm water flows and protect the environment.

DWSD and STATE OF MICHIGAN ISSUES
March 14, 2012

I. Flint & KWA

Flint has been a contract customer of DWSD since 1965. The original 35-year contract term expired in 2000, but service continues under the terms of the original contract, pending notification to terminate (the contract requires a one-year notice) from either party. The original contract contained estimated annual volumes for every year covered by the contract, and contained a "take or pay" provision equal to one-half of the estimated figures. In 1990, after Flint's failure to purchase up to 50% of the estimated amounts in the contract, DWSD and Flint negotiated an amendment that lowered the annual estimates, but left all other terms intact. Flint sells DWSD water to Genesee County on a wholesale basis via terms of an agreement between those two parties that was originally dated 1973, with a 2013 expiration date.

(a) KWA

Genesee County has been exploring alternative sources of water for a decade. That effort is led by the County Drain Commissioner Jeff Wright. The Karegnondi Water Authority (KWA) was established to more formally coordinate the evaluation of water supply alternatives. KWA consists largely of Lapeer County, Genesee County and Flint. The KWA project involves a $600,000,000 investment to pump and transmit raw water from Lake Huron to Flint. Even KWA acknowledges it is not a better financial arrangement than DWSD for the next 30 years. KWA is presently requesting Flint to agree to participate in a $10,000,000 engineering study and reports construction could start late 2012 or spring 2013.

DWSD has not ignored this effort. Instead a technical and financial committee consisting of KWA and DWSD representatives has been working cooperatively to DWSD / Flint / Genesee County for various options for the authority. DWSD Director McCormick and BOWC Chair Fausone have met with Mr. Wright and Flint financial manager, Mr. Brown, since the new year.

The KWA communities comprise about 6 percent of the DWSD water revenue structure. DWSD and its customers (through the TAC, etc.) have expressed a desire to keep the KWA communities "on board", but have been reluctant to pursue alternatives which would do so at a cost to other customers more than the 6 percent revenue requirement increase that would occur if DWSD just let them leave.

(b) Capacity

Through its five water treatment plants DWSD has the capacity to produce up to 1.7 billion gallons per day (bgd) of water – but current demand levels are closer to 1.0 bgd. DWSD has a large amount of available "excess" production capacity, which has contributed to recent rate increases – DWSD has maintained this capacity as water demands and sales have dropped.

DWSD's new capital improvement plans, and the mission of the upcoming master plan update, are seeking the best manner to "downsize" capacity and still meet service levels to the entire Southeast Michigan region. At the same time, the "independent" KWA plan seeks to unnecessarily add new water production capacity of approximately 60 to 80 million gallons per day (mgd) to the region, while taking that demand away from the DWSD system. Clearly, this is not an efficient nor strategic investment of public dollars in the region.

(c) Impact and Compliance

At DWSD water supply and sewage disposal functions are so fundamentally intertwined as to be inseparable. Administration, finance, procurement, maintenance, security, metering, customer service and billing, enterprise system investments, programs and initiatives that are essential for one utility function are also required for the other. The Water / Sewer Rate Interrelationship is based on the reality that DWSD is a unitary department that manages and operates both Detroit's water system and its sewer system. The extent that DWSD resources and facilities directly serve both the water and sewer systems is apparent in that only approximately 40 percent of DWSD employees perform "solely water" or "solely sewer" functions. These employees are primarily located at the treatment plants. The remaining 60 percent carry out activities that benefit both systems. The costs of these resources and facilities are shared between the two utility systems. The water rates provide the funding mechanism for the water system's share and the sewer rates provide the funding mechanism for the sewer system's share. The ability of the sewer system to carry out its mission and achieve long term compliance with the Clean Water Act is directly impacted by the ability of the water system to provide its share of the funding for these resources common to the water and sewer systems.

DWSD is requesting the State, which has appointed a financial manager for Flint, consider a regional approach to decisions of water and sewerage services. The State should not encourage or authorize DWSD customers to cannibalize the existing system, and to add additional regional debt thereby increasing the pressure on DWSD's customers to support existing debt and operations.

II. Distressed Communities and Customers

In recent years, the global economic issues have had a significant impact on Southeast Michigan and DWSD. With significant loss of water use (sales) and the commensurate sewer use (sales), rates for both services have risen substantially to cover costs associated with past and current capital investments. Compounding the decline in sales is the increasing bad debt on the systems from both Detroit and customer communities.

Detroit Public Schools and Highland Park, both under State oversight, are in significant arrearage to DWSD. The DPS accounts receivable is approximately $11,000,000. The Highland Park account receivable is at $9,576,165.

In recent months, the problems in Highland Park have resulted in the State approaching DWSD to assist Highland Park due to potentially significant public health issues in their drinking water system.

Other Southeast Communities are also demonstrating an inability to pay DWSD for services provided to their communities. In addition to Highland Park, six additional DWSD customer communities including Inkster and Hamtramck have increasing past due amounts. For example, the City of Inkster, which has recently received State funds "to keep the lights on", owes DWSD $1,595,844. Additionally, the City of Detroit which is undergoing financial review by the State has a general fund arrearage to DWSD of approximately $8,000,000.

It is quite likely DWSD will be asked to assist or manage some or all of the failing community's water and waste water systems because DWSD is uniquely positioned to do so. We recognize the critical role DWSD might have in these issues. However, it is quiet ironic that the State would seek DWSD's assistance through assuming responsibility for failing systems, and the economic risk that goes with that, at the same time the State would allow or facilitate DWSD's largest customer to exit the system. Add to this that the most significant outstanding debt owed DWSD are communities under State oversight or on the watch list. These actions in total are of significant detriment to DWSD, further hampering DWSD's ability to address investment necessary to effect long term compliance.

DWSD is requesting the State require distressed communities, and entities under State control, to pay for services provided and to consider water and sewer issues in its regional decision.

Ed Kurtz and Kevyn Orr spoke this afternoon. Ed indicated that Flint will not accept the last offer from DWSD. His formal letter is attached.

I spoke with both (separately) after the call. They both indicated that they had a good conversation, and that they sincerely look forward to working with the other in good faith over the next couple years.

Kevyn indicated that he would follow up with Sue McCormack, and that his direction will be that there be no more talking to the press about the issue. Ed plans to stay silent on the deal until Monday, at which time he will address the issue in a matter of fact matter, and stay away from any divisive language regarding the issue.

RE: DWSD Offer Evaluation

Dear Mr. Orr:

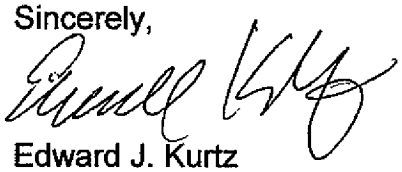
DWSD's offer of a Public/Public Partnership appears on the surface to offer significant cost of water savings, particularly in the near-term. However, further analysis exposes several flaws and weaknesses with the offer that reduce any potential appeal. First, the offer continues to use a grossly inaccurate estimate of the KWA operating and capital costs over the next thirty years. This one estimate is off by at least $800 million and perhaps by as much as $1 billion over that timeframe. And since DWSD claims "total savings to the Flint region are over $900 million", they have relied on this flawed estimate of KWA cost to make this claim. This offer also relies on a projection based on very little capital expenditures, no repairs on a system that is past its life expectancy, and annual rate increases of 4.7% over the next 30 years.

Secondly, and of much greater concern to Flint and GCDC, DWSD's offer of partnership would not so much foster a true collaborative relationship, but instead contractually transfers significant liability and risk for the next thirty years. DWSD's offer states the contract "would reflect more input into and control over system investments and cost variables." Unfortunately, these future investments and cost variables are not contained in the DWSD cost estimates. DWSD has included a fixed monthly charge to recover allocated capital revenue requirements, but this number is largely for past expenditures and debt costs, and does not include the significant future capital costs which will be required to maintain their nearly 50 year-old system. Once again quoting from the

DWSD April 24th offer letter under the Rate Increase Guarantee section – "DWSD proposes a guarantee that the capital portion of the Lake Huron System rate structure (the fixed monthly charge) will not increase for the life of the contract, unless additional capital investment is made in current and future Lake Huron System facilities." No one disputes that additional capital costs will be required that will total in the millions of dollars.

The DWSD offer is able to appear to offer savings on the surface since they have offloaded much of the above future capital costs. But to do so, DWSD has had to gloss over or simply ignore these large future expenditures. If these unaccounted for capital costs were to be calculated and added to the 30 year Flint and GCDC cost of water estimates, the DWSD offer becomes one in which the savings swing far to the advantage of the Karegnondi Water Authority.

Sincerely,



Edward J. Kurtz

ATTACHMENT 1

This offer has more risk involved than previous proposals. KWA would be responsible for between 20% and 100% of the repair costs on the pipeline and related assets from Port Huron

The numbers in the offer do not make sense. DWSD indicates savings of over $900 million while KWA's total cost over 30 years is less than $650 million.

Offer is based on very little capital improvements, no repairs and a 4.7% annual increase over the life of the contract.

There are no rate guarantees after the first year for capital, O & M or consumption.

KWA would be responsible for redundancy at a cost of $94.68 million per DWSD's estimate.

Does not guarantee a rate structure if system regionalizes or DWSD regionalizes, or Detroit enters bankruptcy.

Flint and Genesee County could have a connected waste/water system that serves all or part of five counties.

The potential for further consolidation of services between the city and the county i.e...water, wastewater, 911, etc,

This partnership will give Flint ownership of its own water supply system with real representation on its board of directors, making all treatment and delivery system decisions.

Flint's participation allows them to utilize its own water treatment facility that it has invested 50 million into and only currently exercises four days per year.

The investment gives us a new pipeline with a life expectancy of 75 years, as well as a 2nd product, untreated water. Under DWSD we would have no ownership after the end of the contract, and a new pipeline would still need to be built.

A 30 year contract with DWSD keeps us on a system that is 48 years old with a design life of 75 years. There will be necessary major investments or replacement costs that are not accounted for in this DWSD proposal.

KWA guarantees its capitol rate for 25 years. The capitol rate is 90 % of the total costs.

The commodity charge of $1.30 per mcf is mainly driven by energy costs. The whole operation will employ 5-7 people.

A thirty year contract with DWSD will lock Flint into hundreds of employees, labor costs and legacy costs.

The combination of low financing, labor and material make this the optimal time for this investment. At our meeting with the governor on April 19th Detroit acknowledged a second pipeline had to be built.

KWA could be used as a backup emergency supply for the existing 48 year old pipeline.

It brings a total economic package to our community i.e. We have the I-69 corridor, I-75 interchange, the rail system connected to Port Huron, and one of the busiest airports in the state. Owning our own water supply completes that package and keeps $25 million in our community.

Mr. Fausone's continued insistence on a 12 month timeline to calculate the termination fees leaves a question mark on the costs.

Construction Costs

- Rowe/AECOM/J & H $272,000,000
- TYJT $357,000,000

  Include: 10% bond coverage (dispelled)

  30% additional engineering (dispelled)

  Back-up power (dispelled)

- DWSD Starts at: $357,000,000 and adds:

  $134,630,000 for bond sizing

  $11,074,500 for bond sale cost

  For a total of: $503,274,500

  Plus need to collect $6,984,000 per year extra for bond coverage (20%)

Now we need:

20% bond coverage

30% additional engineering

38% bond sizing

We dispelled TYJT numbers; now DWSD starts with those numbers and adds more They add the same costs to Flint and GCDC construction costs (baseline figures and assumptions – KWA)

Baseline Figures and Assumptions - KWA Scenario

	DWSD Water Rate Structure			
	Fixed	Standby	Commodity	
2014	738,006	#N/A	13.01	Service ceases after 2016

Total Water Service Costs for Flint / Genesee County Drain Commission

For what it is worth, I would look at having flint spilt off the water system into some kind of regional authority and separate the finances from the general city if you are going to move forward with kiragani. The city has a propensity to use the water system as a cash cow and it will help them avoid that problem in the future.

Thanks

Tori –

Per our conversation earlier, attached are two items to be included in the Governor's briefing packet this evening. They're both on the Flint Public Safety Administrator/Detroit Water & Sewer joint employment issue.

One is the original letter to the Governor that came from the Flint City Council.

The other is the proposed response that's been vetted and approved from treasury team.

Also included a few of the latest news articles on the matter.

Thanks!

OFFICE OF THE CITY COUNCIL

Januarv 16. 2013

The Hon. Rick Snyder, Governor
State of Michigan
George W. Romney Building
111 S. Capitol Ave.
Lansing, Michigan 48933

Dear Gov. Snyder:

The Flint City Council is requesting an investigation into a situation that, on the face of it, appears unethical at best and egregious at worst. We're talking about the recent disclosure that Barnett Jones, former Police Chief of Ann Arbor, was working two full-time jobs – one as Public Safety Administrator for the City of Flint and one as Chief Security and Integrity Officer for the Detroit Water and Sewerage Department – the very department that Flint is negotiating with for future drinking water.

By way of background, on at least two occasions, you and representatives from the State have been in Flint to address your commitment to fighting crime and dealing with the crime problems in our community. At your recommendation, Emergency Manager Michael Brown hired Mr. Jones to oversee the police and fire departments. Since his hiring, the City of Flint has had 66 homicides in 2012, and four in the first 12 days of January 2013. While Mr. Jones was hired to help, it appears that he was more concerned about having two well-paid jobs at a time when our crime statistics continue to rise.

Many on the Council and in the community were stunned when Mr. Jones was hired since the police department already had a Chief – Alvern Lock – and because the city was said to be in such financial distress that your staff ordered an emergency financial takeover. Mr. Brown answered those questions with assurances that Mr. Jones would be instrumental in developing an effective public safety plan to help deal with the high numbers of crimes per capita that Flint records each year.

Still, questions lingered, especially since he was paid higher than any other official (outside of Mr. Brown) in recent memory, since he was seldom seen by employees in his own departments, and especially when Flint tied the record for the most homicides ever last year.

It is our feeling that the time has come for you and the State Treasurer's Office to revisit and review the Emergency Manager and the direction that the EM has taken Flint over the past 13 months. It is clear that his direction has not addressed crime, the city's financial situation has not improved and the deficit has more than doubled since his appointment.

Moreover, we have witnessed the following:

1101 S. SAGINAW ST. FLINT, MICHIGAN 48502 MUNICIPAL CENTER (810) 744-7418 FAX (810) 766-7032 TDD (810) 766-7120

- A stagnant economy
- Hardship that the increased taxes and fees have caused our citizens, particularly the elderly
- Loss of population due to those same increases in taxes and fees
- Continued loss of population loss due to crime and fear of crime

All of the above have implications in terms of our ability to attract and retain industry in the City of Flint.

Clearly, we are on the wrong path, and we need to review options other than an Emergency Manager to the extent that a Consent Agreement between the elected officials and the State may better serve our community.

It is time that we look at this very seriously and that you review this prior to your decision to reappoint/appoint an Emergency Manager before the end of March.

Lastly, we kindly request that you attend a City Council meeting where these and other questions can be posed to you by members of the Council and the community. If that is not possible, we ask that you please respond to these questions in writing.

We look forward to hearing from you soon.

Sincerely,

Scott Kincaid, President
Flint City Council

Steve,

I am wondering, if somehow, I could send a letter to the Governor regarding the water bills in the City of Flint. Effective 3-1-13, the City will now require a $350 service fee for turning on water to a home. Shut off accounts and new water applications. Plus a $75 deposit on top of that.

The fee was $100. This is on top of a change that took effect just a few months ago of increasing the water fee to $53 per month just to have water in the home. Then the usage is on top of that. This is the city managers way of trying to balance their budget.

People in Flint cannot afford this. DHS cannot afford this. It is hurting our SER funding and my CP/CP funding. People in Flint cannot live with these rates. I feel somehow the Governor needs to hear about this.

I have asked numerous times to meet with the City manager with no luck. My own Board member is an advisor to the city manager and I have asked him to set up a meeting and he has not.

What can we do to get the Governor's ear?

Randy Rauch

Follow Up Flag: Follow up
Flag Status: Flagged

Dennis,

There is some information attached on the Flint water issue you asked us about. I summarize a few of the key points:

- The water system has been running at deficits for years. When the previous EFM left the City in 2004, the water system has a reserve of approximately $60 million. When Mike Brown was appointed, this had turned into a $20 million deficit due to years of not passing along to consumers the rate increases of over 10% hitting the system from DWSD. Slides 5 & 6 of the attached power point show this pretty dramatically.
- Substantial increases over the past few years are an attempt to reflect the actual costs of running the system.
- Another concern raised by DHS was the increase in the deposit for rental properties. This was necessary because renters paid the previous $100 deposit, then racked up water bills in excess of this amount and walked away. Of the affidavits currently out there, 82% are past due. I would also note that this is not mandatory, it is only required if a landlord is not willing to put the water bill in their name.
- The bottom line is that they realize it is an issue, but the General Fund doesn't have the money to run general City operations, much less subsidize water rates.

The two page word document (attached) provided by the EFM gives you a good overview of what is going on. They believe that a switch to KWA is part of the solution for high water rates in the City.

City Of Flint Water History Facts

Current Treatment Plant was put into service in 1954.

Current 72" main pipeline was completed in 1970.

Flint signed a 30 year contract with Detroit Water and Sewer Department in the mid 1960's.

The contract with DWSD has expired and we are currently operating on a yearly extension.

In 2006 Flint completed a $48,000,000 upgrade of the existing Water Plant (required by the MDEQ & for backup only).

Flint's Water & Sewer System is approximately a $300,000,000 Enterprise.

Flint's Water & Sewer System is designed to deliver water to over 200,000 people with over 1,500 miles of infrastructure.

Flint's most recent census count shows a population of approximately 102,000 in 2010.

Flint's census population in 2000 was approximately 124,000.

The water system had over 45,000 customers in June of 1999.

The water system had just over 36,000 customers by June 2011.

The "Fixed Costs" that must be covered to maintain the system and deliver quality water have increased over time.

CITY OF FLINT
WATER NON-PAYMENT TURN-OFF POLICY

1. Water services to any customer may be shut off if the account is not paid until after 30 days after the due date. (City ordinance 46-52 (h))

2. Non-payment turn-offs are done only Monday through Thursday. The Customer Service Center does not schedule non-payment turn-offs on Fridays, Saturdays, Sundays, or most recognized holidays.

3. Illegal usage, broken payment arrangements and NSF (non-sufficient funds) turn-offs are done at any time without additional notice.

4. Turn-off notices are mailed to delinquent customers fifteen (15) days before actual turn-off.

5. The water customer is responsible for maintenance of all plumbing in the premises including connection to City water mains or sewer lines.

6. If a customer disputes a water bill and is unable to resolve the issue with Customer Service personnel, the customer may request an administrative review. Further information on any water account may be obtained by calling (810) 766-7015 or visiting the Customer Service Center at 1st Floor, City Hall, 1101 S. Saginaw St.

Preliminary Options for Future City of Flint Water Sources

Consider a New Negotiated Contract with Detroit Water and Sewer Department

PRO'S	CON'S
No upfront capital costs	Lack of control over new / fixed changes
Possibility to negotiate a lower rate	Past practices
Ability to "Blend" water sources to further control costs	

Consider a Contract with the Karegnondi Water Authority

PRO'S	CON'S
Voting member of KWA board	Capital cost (debt service)
Ability to "Blend" water sources to further control costs	Uncertainty of final costs
Raw water is an asset for attracting new buisnesses	

Blended Use of the Flint River

PRO'S	CON'S
Helps control cost of water	

*** CURRENTLY NO DECISIONS HAVE BEEN MADE REGARDING THE FUTURE WATER SOURCE

Improvements for City of Flint Water System

Reduce Leakage

- **Finalize a Preventative Maintenance Plan**
  - (Planning started in January 2012, requires funding, … part of Operational Costs)
  - Will help identify repair area's

- **Reduce water theft**

- **Replace water meters**
  - We currently have an eighteen month plan to replace all meters with more efficient "*Smart Meters*"

- **Encourage routine household checks**
  - "Faulty" toilets are a significant reason for household water loss. and unexpected larger bills.

Other Leakage concerns

- ✓ Transmission Loss
- ✓ Fire Hydrants
- ✓ Incorrect water bills
- ✓ Non-Payment

Response to Treasury regarding water rates, etc.

The cost of water and sewer in the City of Flint has become one of the most vexing issues facing the Emergency Financial Manager. When the Emergency Manager was appointed in December 2011 the water system had a $20 million deficit. In order to address this deficit the EM was forced to increase water and sewer rates by over a combined 120% in the past 18 months.

When the previous EFM left the City in 2004, the water system has a reserve of approximately $60 million. In the intervening years several things occurred: for three of five years (2007-2011) no rate increases were passed along to customers even though Detroit charged increases of over 10% per year; in the years when increases were passed along those amounts did not equal the actual cost of the system; the City chose to use the equity built up in the Water and Sewer funds until that was no longer available; a large lawsuit was settled; the City must pay for the $48 million MDEQ upgrades required at the Water Treatment Plant; and unbilled or unpaid water and sewer charges increased significantly.

In the past 18 months water and sewer rates have been increased to reflect the actual costs to operate the water and sewer system. Major leaks in the distribution system have been repaired. Unpaid water and sewer usage is now being addressed and the water affidavit process is part of this problem.

The City of Flint currently allows landlords to put the water and sewer billing in the name of the renter. This affidavit process holds the landlord harmless for any water costs. The deposit for the affidavit has been set at $100, which is the lowest in the County. The deposit fees in the County range from a low of $100 to a high of $500. The City is raising its rate to $350, which puts us about in the middle of the range. Depending on usage, this will cover 60 to 90 days' water charges and reduce the amount of uncollected billing. Keep in mind, any water not paid for is eventually charged to those who do pay through increased rates.

Because the deposit is so low in relation to the current charges, renters quickly owe more than the deposit, and find it easier to simply walk away from the rental and forfeit the deposit. This results in the City being on the hook for the unpaid bills. Currently there are 4,893 affidavits, and 4029 of them (82%) past due. This facctor alone totals to just under $3 million. In addition, when the renter walks away, the City has no way of knowing that the property is vacant. Many times the landlord rents the property again, without filing an affidavit, and the water continues to be charged to the former renter, again adding uncollected bills to the City. In the past the collection rate for past due accounts, when turned over to a collection agency, has been about 3% on average. Keep in mind that this is a deposit, not a fee, and can be refunded when the renter leaves the property. Also, the landlord can avoid the renter's deposit requirement by keeping the water and sewer billing in his name.

The City is also studying the potential to hold the landlord accountable for the water charges under certain conditions, such as failure to notify the City when a renter leaves and then renting the property again without filiing a new affidavit.

The City recognizes that the high cost of water is a factor which is causing low income residents to choose to leave the City and the increase in the deposit fee might accelerate that choice. However, many of the surrounding communities charge a higher deposit than does the City o Flint. Renters are leaving the City because they can get better housing for less money, live in safer neighborhoods with better schools, have their water charges decrease by about half, and have their insurance rates reduced by approximately 50%.

Water and sewer costs have resulted in about 8,000 current customers to be more than 60 days past due. Many are senior citizens who have lived in Flint their entire life, paid their taxes, etc. and now find themselves unable to pay their water bill. This concerns the City more than the issue of deposits. We have put in place for this year the ability for citizens to direct a part of their city tax refund to help people with their water bills, and we are reviewing other options as well as scheduled meetings with agencies involved in helping low income people with their bills.

We further recognize that we have staffing issues and water theft to address. The City is able to complete about 120 water shut-offs per week. At that rate we can not keep up with delinquent account shut-offs. The city also reconginzes that water theft through meter by-pass or unauthorized turn-on must be resolved.

Ultimately, the City must find a way to hold down future increases in the cost of water, to bring them more in line with the Genesee County water customers. To this end the City has recommended to Treasury, that the City leave the Detroit Water System and join KWA with Genesee County, Lapeer and Sanilac Counties and the City of Lapeer. We believe this is the most significant long term factor in stabilizing costs to the water customers in the City of Flint.

> Flint City Council approves resolution to buy water from Karegnondi, state approval still needed
> By Dominic Adams | dadams5@mlive.com
> on March 25, 2013 at 10:45 PM, updated March 26, 2013 at 1:28 AM
> FLINT, MI – Flint is one step closer to getting its water from Lake Huron as part of the Karegnondi Water Authority.
> The vote, approved 7-1 at the Flint City Council meeting Monday, March 25, may have set in motion the end to Flint paying to get its water from Detroit.
> Under the proposal, Flint would get 16 million gallons per day of raw water from Lake Huron, pipe it to Flint for treatment and then sell it to customers throughout the city. Another 2 million gallons per day would come from the Flint River and will be treated in Flint.
> Mayor Dayne Walling said the Department of Environmental Quality must approve Flint's getting 2 million gallons per day from the Flint River.
> Tuesday's meeting followed weeks of discussions and special meetings surrounding the resolution.
> "We got there," Councilman Joshua Freeman said. "That's the important thing."
> There were more than 50 people at Monday's meeting.
> "Going with Karegnondi is the best decision. We have no opinion on the economics of the decision," said Rebecca Fedewa, Flint River Watershed Coalition executive director. "If we start drawing water out of the Flint River, we are at risk of having to start releasing water from our reservoirs."
> Genesee County Drain Commissioner Jeff Wright said the decision must still be approved by a county water and waste advisory board. The KWA board will then be reconvened for final approval.
> Wright said construction could start in May.
> State treasury officials still must approve the city council's move because Flint has an emergency financial manager. All expenditures over $50,000 must be approved.
> Genesee County Drain Commissioner Jeff Wright has said that Flint would pay roughly $6.4 million annually for water service if it joined the pipeline – a nearly $4 million savings on what it

pays Detroit for water.
Walling previously said the city would save $19 million over eight years by getting water from the KWA.
"It's a historic night in the City of Flint," Walling said. "The savings will be less with the capacity level approved by city council because there will be increased treatment cost for the river water."
He said the DEQ told the city it needed to get 18 million gallons per day or there would have to be additional work done at Flint's water plant.
Flint's water plant and the Flint River is currently the backup for Flint and Genesee County, however, the plant only operates four times per year.
Councilman Bryant Nolden was the lone dissenting vote.
"It was a protest vote," Nolden said. "I knew they had enough votes. I just feel like the Flint River is our best option."
Karengnondi is the regional water authority that includes Genesee, Lapeer and Sanilac counties and the cities of Flint and Lapeer.
Flint is the second municipality, behind Genesee County, to officially decide to purchase raw water through the KWA. Lapeer city officials said they intend to purchase water, but an agreement has been finalized.

From Matt Schenk tonight, after I asked him about whether another offer is in the making:

Sue did reach out to flint to get their latest requirements so that we can make another offer.
I am back on Monday to get a sense of where we are. I know that Orr was also briefed and had some concerns about how losing flint as a customer could negatively impact our value.

I will shoot a quick email to Kevyn to see if he needs any more information.

Brom, did you receive the following email yesterday. I would like to contact DWSD, but would like to hear from the Governors office before I do. Ed

---------- Forwarded message ----------
From: **Ed Kurtz** <ekurtz@cityofflint.com>
Date: Mon, Apr 8, 2013 at 10:25 AM
Subject: DWSD
To: Brom Stibitz <StibitzB@michigan.gov>

Brom, attached is a draft of a letter to Sue McCormick that I intend to email to her today, unless you have concerns with the tenor of the letter. We are just kind of tired of reading about "war" and "reckless" and "credible study" and new options in the media. Having said that, we still want to get the best deal for the people of Flint. Also, per our conversations last Friday, what is the status of the decision on our recommendation to go with KWA. Ed

ELECTRONIC LETTER

April 8, 2013

Sue F. McCormick, Director
Detroit Water and Sewerage Department
735 Randolph, Room 506
Detroit MI 48226

Dear Ms. McCormick:

The City of Flint is in receipt of your email of April 8. In it you indicate you would like to meet to discuss DWSD's recent proposals to Flint. The Emergency Manager, the Mayor and the Genesee County Drain Commissioner are not aware of any "recent proposals". We do see mention of other proposals in the media, but we have received nothing new in writing. It is disappointing to the City of Flint that DWSD has chosen to do its negotiation through the media. In particular Flint takes offense to comments such as "effectively launched the greatest water war in Michigan's history", "reckless push" and a continued reference to "a credible state-sponsored study " that we have previously indicated to you that it contained several inaccuracies.

All of this coming from a DWSD consultant that just a little over two years ago indicated that "DWSD is the poster child for Detroit corruption". Short of the DWSD issuing a public apology for the those comments and a public acknowledgment that there are legitimate concerns with the Tucker Young report, the City of Flint would find it difficult to negotiate in good faith with DWSD.

Further, it is the City's belief that you made your best offer to us in December of last year. However, having said that, if you comply with the above conditions, the City of Flint would be willing to review any new options that would be in the best interest of our citizens. Any offer must be in writing, complete in detail, including projected costs over the life of the contract, and provided prior to any meeting. Any offer must also be endorsed by the office of the Detroit Emergency Manager.

Finally, time is of the essence. Please email any of the proposals you referenced in your email to me today.

Sincerely,

Edward Kurtz
Emergency Manager

Subject: RE: DWSD Letter

I think Ed should respond to McCormick. I wouldn't have reacted quite so negatively, but then that's me. I would encourage him to always stress that they are open to new proposals, but haven't seen one. But, I'm in no position to rewrite emails. I do think that a clean closure on both sides is warranted. It's not like KWA wouldn't still need a negotiating posture with DWSD.

What was Sue's response to the request for a last best offer? I take it she wasn't interested, or at least didn't feel that she could offer any more than previously done? Schenk's about as good as you can get in public life, so with Sue if they don't have an offer, I can't figure out what we can do more. I'm really surprised that DWSD hasn't responded with a final counter.

Sounds like the well is pretty poisoned (no pun intended).

Brom, attached is a draft of a letter to Sue McCormick that I intend to email to her today, unless you have concerns with the tenor of the letter. We are just kind of tired of reading about "war" and "reckless" and

"credible study" and new options in the media. Having said that, we still want to get the best deal for the people of Flint. Also, per our conversations last Friday, what is the status of the decision on our recommendation to go with KWA. Ed

Subject: Flint Water Distribution Comm Plan
Attachments: Flint Water Distribution Comm Plan.docx

Attached is the comm plan for the announcement of the Treasurer's determination on the Flint water plan today. Terry will be handling at Treasury, contacting media and fielding follow-up questions. Given that this was the Treasurer's determination to make, we will send all inquiries to Terry. If we receive any questions specific to the Governor I will handle in the afternoon when I get back from Grand Rapids.

Caleb

Flint Water Distribution Comm Plan and Talking Points

4/11/13

Flint Emergency Manager Ed Kurtz submitted a resolution to Treasurer Dillon on Friday, March 29th, seeking approval for Flint to join the Karegnondi Water Authority (KWA) to secure potable water for the City of Flint. The move to join KWA would remove Flint as a customer of Detroit Water and Sewer Department (DWSD). Treasurer Dillon was required to approve the resolution by EM Ed Kurtz per PA 436, because it was an expenditure over $50,000

Communication Plan

Thursday, April 11, 2013

- **9:00 a.m.** Send official notification of approval to EM Ed Kurtz (Brom Stibitz/Amy Hichez)
- **10:00 a.m.** Call Flint Mayor and Council President (Andy Dillon)
- **10:30 a.m.** Call DWSD to notify of decision (Andy Dillon/Brom Stibitz)
- **10:30 a.m.** Contact Flint media (Terry Stanton/Caleb Buhs)
    - Ron Fonger, MLive; WNEM; WJRT; WEYI

Topline Messages

- This is a decision made by the City of Flint and is a local decision that affects their local water supply.
- After thorough review and analysis, Treasurer Dillon approved the resolution for Flint to join the KWA.
- Flint Emergency Manager Ed Kurtz has worked closely the city's elected officials throughout the decision-making process and all agree that this is best for the citizens and businesses in Flint.
- This is a good example of an EM and city officials collaborating to determine the best course of action for the city's future.
- The Departments of Treasury and Environmental Quality have approved the financial and environmental soundness of KWA's plan.
- Flint accounts for only 2% of DWSD's capacity.
- With continued efficiency improvements and ongoing administrative restructuring, DWSD will be suited to handle the loss of customers.

Background

- This move will allow Flint to control future water rates for Flint residents.
- This will save Flint at least $100 million over the next 25 years, and possibly as much as $300 million.

DRAFT

- Genesee County planned to build pipeline whether Flint was part of the project or not. The removal of the county from DWSD accounts for 4% of their capacity.
- Collaboration between the City of Flint and Genesee County could signify the start of a better relationship and could lead to future collaborative endeavors.

DRAFT

> >
> > Hi Bill,
> >
> > From a capacity standpoint, supplying KWA is completely feasible under either proposal with no adverse impact to the rest of the DWSD supply network. The proposal

lists KWAs contracted max day demand at 40.6 mgd, the design and rated capacity of the Lake Huron Plant is 400 mgd. The DWSD service area average and max day are about 650 and 950 mgd; the other four water plants combined have a rated capacity of over 1100 mgd.

I don't know the details of the cost analysis other than what has been reported by DWSD. It is my understanding that over the 30 year pay back period that full service water provided from DWSD would be more a lot more expensive than what KWA has projected if they separate. Several intermediate proposals of varying cost estimates have been presented without success. KWA was issued a permit last fall for constructing an intake (independent of DWSDs) and I think the plan is to start construction as early as this fall. Then a treatment plant would be constructed to treat the water. Flint has a water plant that draws raw water from the Flint River, but the plan would be to purchase raw water from the KWA intake and treat at their plant, using the River as a backup source. KWA has estimated a project cost of $274 million, DWSD estimated the project cost at $375 million; but I don't know exactly what the scope of work was for those estimates so I'm not sure that it's an apples to apples comparison.

Overall, besides the know impacts to DWSD for loss of revenue and increased cost to the rest of the system users to cover fixed cost, debt, etc., there could be other systems revisiting their proposals to separate. Grosse Ile and a few surrounding communities had looked into forming a water authority and building a plant to serve them; Grosse Pointe Park had submitted incomplete plans a few years back to build their own microfiltration plant. At one point, Grosse Pointe Shores was considering a study to see if they could re-work the Grosse Pointe Farms network to purchase water from them rather than DWSD through GP Woods.

Let me know if you want to discuss this further.

thanks,
Laura

No legacy liability to Flint. DEQ remains firm that kwa best for Flint, lower cost. I think Kurtz held press conference today (4:30 pm) affirming decision. According to Kurtz, he got last offer from Flint Journal. Seems dwsd just wanted to negotiate in the paper. Unless I hear from you, we intend to let decision stand.

>
> 1. The DWSD scenarios are based on 40 MGD of service capacity. However, the KWA project is providing 60 MGD of initial capacity with potential expansion to 75 MGD in the future. Therefore, in order for a more direct comparison the DWSD scenario would need to increase capacity to 60 MGD, which would increase fixed rate commodity costs as well as the

capital costs for the Huron Plant that DWSD was planning to allocate to Flint and Genesee Co., presumably by as much as 50%.

2. DWSD proposals cover a 30 year period to 2042, but fail to recognize that after this period bond payments for the KWA project will be complete and result in a significant reduction in costs for the KWA option.

3. While DWSD indicates that Flint and Genesee Co. would be given "broadened representation", it remains unclear exactly what this means in terms of actual control in the decision making process.

4. This scenario continues to rely on a single transmission system and would require the City of Flint to maintain its WTP for emergency purposes and these costs do not appear to be included. In addition, use of the Flint WTP as an emergency backup would leave Genesee Co. without an adequate backup supply to meet their 30 year needs.

Again, without DWSD providing the specific details of these proposals, it is difficult to provide a true comparative analysis, and as such Flint and Genesee Co. appear to be justified in their rejection of these proposals.

Please let me know if you require any further response.

Director Wyant, Deputy Director Sygo, and Liane,

A response at this point may be moot as Flint and Genesee Co. already held a press conference yesterday rejecting the DWSD offer.

It is also unclear whether DWSD provided its offer directly to Flint and Genesee Co. by the deadline in Treasurer Dillon's letter. However, Flint and Genesee Co. still took the offer under consideration.

Our office concurs with both Flint and Genesee Co. that the offers provided by DWSD were incomplete.

Of the two scenarios provided by DWSD it appeared that only Scenario 2 was listed as potentially being more cost effective. However, this scenario did not address the following:

1. The DWSD scenarios are based on 40 MGD of service capacity. However, the KWA project is providing 60 MGD of initial capacity with potential expansion to 75 MGD in the future. Therefore, in order for a more direct comparison the DWSD scenario would need to increase capacity to 60 MGD, which would increase fixed rate commodity costs as well as the capital costs for the Huron Plant that DWSD was planning to allocate to Flint and Genesee Co., presumably by as much as 50%.

2. DWSD proposals cover a 30 year period to 2042, but fail to recognize that after this period bond payments for the KWA project will be complete and result in a significant reduction in costs for the KWA option.

3. While DWSD indicates that Flint and Genesee Co. would be given "broadened representation", it remains unclear exactly what this means in terms of actual control in the decision making process.

4. This scenario continues to rely on a single transmission system and would require the City of Flint to maintain its WTP for emergency purposes and these costs do not appear to be included. In addition, use of the Flint WTP as an emergency backup would leave Genesee Co. without an adequate backup supply to meet their 30 year needs.

Again, without DWSD providing the specific details of these proposals, it is difficult to provide a true comparative analysis, and as such Flint and Genesee Co. appear to be justified in their rejection of these proposals.

Ok. Amy, please get available times and dates from Governor. We should ask Wyant and one of his engineers.

Isn't Gov in Flint Friday? Maybe we could do it then in Flint if his schedule permits.

Ok to book during that window. Can it be in Detroit? This delay likely means Flint will be pregnant w KWA by then.

We let Kurtz come w he and two or three and DWSD Fausone w same # as Flint.

Also, invite Wyant and Key engineer. One from Tucker Young.

Dennis, I didn't send Governor report from DEQ (email I sent you) but will now. Is there a max # of people for this?

Finally, some comments from DEQ staff after the 4/15 offer from DWSD:

Comment 1:

From a capacity standpoint, supplying KWA is completely feasible under either proposal with no adverse impact to the rest of the DWSD supply network. The proposal lists KWAs contracted max day demand at 40.6 mgd, the design and rated capacity of the Lake Huron Plant is 400 mgd. The DWSD service area average and max day are about 650 and 950 mgd; the other four water plants combined have a rated capacity of over 1100 mgd.

I don't know the details of the cost analysis other than what has been reported by DWSD. It is my understanding that over the 30 year pay back period that full service water provided from DWSD would be more a lot more expensive than what KWA has projected if they separate. Several intermediate proposals of varying cost estimates have been presented without success. KWA was issued a permit last fall for constructing an intake (independent of DWSDs) and I think the plan is to start construction as early as this fall. Then a treatment plant would be constructed to treat the water. Flint has a water plant that draws raw water from the Flint River, but the plan would be to purchase raw water from the KWA intake and treat at their plant, using the River as a backup source. KWA has estimated a project cost of $274 million, DWSD estimated the project cost at $375 million; but I don't know exactly what the scope of work was for those estimates so I'm not sure that it's an apples to apples comparison.

Overall, besides the know impacts to DWSD for loss of revenue and increased cost to the rest of the system users to cover fixed cost, debt, etc., there could be other systems revisiting their proposals to separate. Grosse Ile and a few surrounding communities had looked into forming a water authority and building a plant to serve them; Grosse Pointe Park had submitted incomplete plans a few years back to build their own microfiltration plant. At one point, Grosse Pointe Shores was

considering a study to see if they could re-work the Grosse Pointe Farms network to purchase water from them rather than DWSD through GP Woods.

Comment 2:

A response at this point may be moot as Flint and Genesee Co. already held a press conference yesterday rejecting the DWSD offer.

It is also unclear whether DWSD provided its offer directly to Flint and Genesee Co. by the deadline in Treasurer Dillon's letter. However, Flint and Genesee Co. still took the offer under consideration.

Our office concurs with both Flint and Genesee Co. that the offers provided by DWSD were incomplete.

Of the two scenarios provided by DWSD it appeared that only Scenario 2 was listed as potentially being more cost effective. However, this scenario did not address the following:

1. The DWSD scenarios are based on 40 MGD of service capacity. However, the KWA project is providing 60 MGD of initial capacity with potential expansion to 75 MGD in the future. Therefore, in order for a more direct comparison the DWSD scenario would need to increase capacity to 60 MGD, which would increase fixed rate commodity costs as well as the capital costs for the Huron Plant that DWSD was planning to allocate to Flint and Genesee Co., presumably by as much as 50%.

2. DWSD proposals cover a 30 year period to 2042, but fail to recognize that after this period bond payments for the KWA project will be complete and result in a significant reduction in costs for the KWA option.

3. While DWSD indicates that Flint and Genesee Co. would be given "broadened representation", it remains unclear exactly what this means in terms of actual control in the decision making process.

4. This scenario continues to rely on a single transmission system and would require the City of Flint to maintain its WTP for emergency purposes and these costs do not appear to be included. In addition, use of the Flint WTP as an emergency backup would leave Genesee Co. without an adequate backup supply to meet their 30 year needs.

Again, without DWSD providing the specific details of these proposals, it is difficult to provide a true comparative analysis, and as such Flint and Genesee Co. appear to be justified in their rejection of these proposals.

LANSING

RICK SNYDER
GOVERNOR

ANDY DILLON
STATE TREASURER

SUMMARY REPORT

TO: Brom Stibitz, Senior Policy Advisor; Department of Treasury

FROM: Eric Cline. Unit Operations Specialist

SUBJECT: Flint Water System Summary

DATE: April 18, 2013

Summary

In November 2012 the Department of Treasury commissioned the firm of Tucker, Young, Jackson & Tull, Inc. (TYJT) to analyze options for the City of Flint to either remain a customer of the Detroit Water & Sewer Department (DWSD) or to join the Karegnondi Water Authority (KWA) in Genesee County. The purpose of this study was to provide objective analyses to the State Treasurer and Flint's Emergency Financial Manager (EFM) in order to secure future potable drinking water for the City.

In December 2012, staff from TYJT met with representatives from the Department of Treasury and the City of Flint to provide a preliminary report on their findings. At this meeting, five options were presented: These options ranged from the Flint Water Plant providing 100% water, to 100% provision of untreated Lake Huron Water by KWA, to 100% provision of treated drinking water by DWSD, or provision of variable amounts of water from DWSD using a combination of blended DWSD water and Flint River water.

From the presentation of the preliminary report in December 2012 to the submission of the final report by TYJT in January 2013, a number of developments made arriving at a final decision very difficult.

- DWSD provided the City of Flint with at least two modified proposals to consider.
- A debate ensued between TYJT and KWA's principal engineering firm regarding the others' conclusions and estimates for construction of the KWA pipeline.
- The Flint EFM eliminated all options except the 100% DWSD option or joining KWA.

In January 2013, the OFR provided a comprehensive report to the State Treasurer analyzing three questions: 1) The projected construction costs and why Treasury believed the projections provided by Flint/KWA were acceptable; 2) Identification of the construction contingencies; and 3) Identification of the options Flint will utilize in the event of a construction cost overrun or a delay in construction. At the end of this report, the OFR recommended to the State Treasurer that KWA presented the best future option for future potable water. The OFR also concluded that KWA appeared to be the cheaper option; the quality of water would improve; Genesee County appeared willing to assist the City in securing the financing for their portion of the project; the KWA project could signify the beginning of better collaboration between the City of Flint and Genesee County; and the KWA project had both political and popular support.

Between January and April, intense scrutiny of the various proposals was undertaken by Treasury and Flint officials. Treasury officials met with officials from Genesee County to gain a better understanding of the KWA project. In February 2013, Genesee County opened bids for construction of the Lake Huron intakes. This bid opening represented the first meaningful step toward commencing construction of the KWA system. The bid was $3-million less than projected.

In March 2013, Treasury was notified that DWSD had contacted Flint to negotiate with the City to retain them as a customer. On April 12, 2013, the State Treasurer authorized the Flint EFM to join KWA, pending review of any final offer from DWSD. A final offer was received from DWSD on April 15, 2013.

DWSD's final offer provided two options. The first option was for a "supply only" rate schedule. Only water treatment costs would be recovered and DWDS would absorb all other delivery costs. Capital and operating revenue charges would be calculated based upon KWA's usage relative to the entire demand upon DWSD's Lake Huron WTP. KWA would also have the ability to construct and own its own transmission lines.

The second option was a "full service" rate option. DWSD would provide all production and transmission services. Transmission rates would be calculated only on those costs necessary to supply KWA and no additional transmission rates would be charged. Capital and operating revenue charges would be calculated based upon KWA's usage relative to the entire demand upon the Lake Huron WTP.

Independent analyses of DWSD's final offer by the OFR, the Flint EFM, and the Department of Environmental Quality (DEQ) generally reached the same conclusions:

- DWSD's offer was a framework subject to negotiations and was not a firm offer.
- The offer provided by DWSD was incomplete.
- DWSD's offer did not include a guaranteed rate beyond year one, nor did it limit maximum annual rate increases.
- The DWSD scenarios were based on 40 MGD of service capacity. However, the KWA project provides 60 MGD of initial capacity with potential expansion to 75 MGD.
- DWSD indicates that Flint/ Genesee County would be given "broadened representation," it is unclear exactly what this means in terms of actual control in the decision making processes.
- The DWSD offer relies on a single transmission system and would require the City of Flint to maintain its WTP for emergency purposes. In addition, it would leave Genesee County without an adequate backup supply to meet their needs.
- DWSD's offer included an attachment that listed the rank-ordered options (from cheapest to most expensive). DWSD Scenario 2 is listed as the least expensive option (but it is unclear how the total cost of this option was arrived at). DWSD Scenario 1 was not listed.
- DWSD provided a summary table of their unit costs but how these figures are arrived at was not clear, so analysis proved difficult.

Without specific details from DWSD on this proposal, a true comparative analysis is difficult to provide. As such the Flint EFM rejected the DWSD proposal and agreed to join KWA.

If further information on this issue is needed, please let me know.

Ed Kurtz, Emergency Manager
City of Flint
1101 South Saginaw Street
Flint, Michigan

Gentlemen:

Over the last several months, governed by a process laid out by the State of Michigan, the Detroit Water and Sewerage Department (DWSD) has proposed a number of alternatives for long term water supply to the City of Flint. Each alternative was offered in the spirit of working in earnest to address the needs, priorities and concerns of the City of Flint and each provided an immediate cost reduction when compared to the current costs of water purchased from DWSD. In the final analysis conducted by Flint, these proposals did not overcome the desire for the Flint/Genesee region to be served by the same system and to have a voice in the future decisions governing the provision of water to this region.

Many of the proposals DWSD has made to Flint during this period are applicable to Flint/Genesee County or KWA with adjustments to demand and use requirements and would provide similar overall benefit. These options remain available for further discussion should the parties' desire. These prior proposals are included in summary form in Attachment 1 as an expanded table 6-1 from the February 2013 State of Michigan Contract No. 271N3200089, City of Flint Water Supply Assessment, submitted by Tucker, Young, Jackson, Tull, Inc. For comparison purposes only, DWSD's new proposal (Flint's 30% allocated share) is inserted.

The proposal scenarios outlined today offer a public/public partnership with options tailored to Flint/Genesee County or KWAs interests. For ease of writing, the remainder of this memo will present this proposal to KWA. Two basic scenarios are presented for consideration, both of which contemplate that KWA would enter a multi-year contract. Service commitments and usage definitions would be negotiated in the same manner as employed that have resulted in new contracts for other customers.

In brief, the proposal provides a unique opportunity to reserve capacity at DWSD's Lake Huron Water Treatment Plant and to participate in decision making for facility operation and capital investment through a joint operating committee. The proposal envisions that KWA would enter into a 30-year contract to purchase treated water directly onsite at DWSD's Lake Huron Water Treatment Plant.

In Scenario 1 the purchased water can either be pressurized or unpressurized. This first scenario results in a "supply only" rate schedule, with a "standby delivery" component to provide for emergency service at the existing Baxter / Potter connection. This scenario provides KWA the ability to construct new transmission owned and operated by KWA.

Scenario 2 maintains the public/public partnership concept and extends it to transmission facilities through which the Lake Huron Water Treatment Plant provides water. This scenario results in a "full service" rate schedule. The standby delivery component is eliminated, since the rate structure to KWA includes costs associated with the transmission system between the Lake Huron Water Plant and the Baxter / Potter connection.

DWSD proposes a modified rate schedule for the customers currently served through the contract with the City of Flint, which includes Flint and Genesee County. This modified schedule is intended to facilitate negotiations for a new water service agreement with the Karegnondi Water Authority (KWA). The scenarios presented herein represent the innovative thinking that DWSD and its new leadership are bringing to the table. Our goal is to provide the lowest cost water solution for the KWA service area.

The potential rate structures are introduced in summary form herein, with preliminary calculations using the proposed rate structures with FY 2013-14 as a baseline. These calculations and the accompanying discussion are based on the assumptions regarding contract terms that approximate recent discussions amongst the parties.

The proposal introduces the concepts, but does not definitively present all of the specifics, appreciating that such specifics are best addressed through negotiations designed to produce a new contractual agreement satisfactory to all parties.

[Remainder of page intentionally left blank]

Scenario 1 – Lake Huron Direct Supply Purchase:

- KWA enters into a long term partnering arrangement with DWSD to purchase all of its primary water supply directly at the DWSD Lake Huron water treatment plant.
- Supply rate schedule is designed to recover only water treatment revenue requirements. This rate schedule does not contain any delivery costs (pumping, transmission, storage, etc.).
- Supply rate schedule is computed based on specific costs associated with the Lake Huron Plant. No other DWSD revenue requirements, including those associated with other DWSD water plants, are included in the rate to KWA.
- Revenue requirements are separated into capital recovery and operation and maintenance expense elements. Baseline revenue requirement data (including operating budget, rate of return, depreciation assumptions, etc.) are identical to those developed for all other wholesale customers.
- KWA is allocated Lake Huron Plant capital revenue requirements based on the proportion of their contracted max day demand (assumed in these calculations at 40.6 mgd) relative to the total capacity at the Lake Huron Plant (400 mgd). The resulting revenue requirements are recovered through a fixed monthly charge.
- KWA is allocated Lake Huron Plant operating revenue requirements based on the proportion of their contracted average daily usage (assumed in these calculations at 24 mgd) relative to the total average daily usage at the Lake Huron Plant (assumed at 125 mgd in these calculations).
- Calculations are conducted for two alternatives. Purchase of *pressurized* water (after high lift pumping) and *unpressurized* water (KWA takes directly from clearwell.)
- Contract includes an arrangement for emergency service at the existing Baxter / Potter connection, and computes a standby charge related to such service.
- The standby charge is computed in the manner set for the by the American Water Works Association (AWWA) in its Manual of Water Supply Practices M1 - "Principles of Water Rates, Fees, and Charges" Manual M1.
    - KWA is allocated one day's worth of transmission related capital revenue requirements.

Scenario 2 – "Full Service" Lake Huron System

- Same as the "pressurized" option in Scenario 1, except that concept is extended to the pumping, storage, and transmission facilities directly served by the Lake Huron Plant
- Transmission rate schedule is computed based on specific costs associated with these facilities. No other DWSD revenue requirements, including those associated with other DWSD transmission mains, etc, are included in the rate to KWA.
- Revenue requirements are separated into capital recovery and operation and maintenance expense elements. Baseline revenue requirement data (including operating budget, rate of return, depreciation assumptions, etc.) are identical to those developed for all other wholesale customers.
- KWA is allocated Lake Huron "transmission system" capital revenue requirements based on the proportion of their contracted max day demand (assumed in these calculations at 40.6 mgd) relative to the total capacity at the Lake Huron Plant (400 mgd). The resulting revenue requirements are recovered through a fixed monthly charge.

- KWA is allocated Lake Huron "transmission system" operating revenue requirements based on the proportion of their contracted average daily usage (assumed in these calculations at 24 mgd) relative to the total average daily usage at the Lake Huron Plant (assumed at 125 mgd in these calculations).
- Standby charge is eliminated.

The resulting potential proposed rate structures under both Scenarios are summarized below.

Potential Proposed DWSD Water Rate to KWA
Lake Huron Direct Scenario

	1 - Supply Rate @ LH Plant		2 - Full Service
	Unpressurized	Pressurized	Wholesale Rate
Supply Rate			
Fixed Monthly Capital Charge - $	219,900	316,600	503,200
Commodity Rate - $/Mcf	2.60	4.16	5.31
Average Unit Cost - $/Mcf	*4.85*	*7.40*	*10.46*
Monthly Standby Charge	167,500	110,300	0
Total Monthly Charge	387,400	426,900	503,200
Total Average Unit Cost - $/Mcf	*6.57*	*8.53*	*10.46*

The direct comparison over the period 2013-2042 is demonstrated in Attachment 2.

As KWA considers this proposal, I offer the following observations for consideration:

- The Public Partnership requires the least near term capital investment and preserves the economy of scale associated with operation of a large regional system resulting in an immediate reduction in the cost of water supply for Flint/Genesee, making the identified and necessary near term investment in local water infrastructure more feasible.
- The Public Partnership provides the opportunity to optimize service level and efficiency through collaborative asset management decision making.
- The Public Partnership provides representation for critical decision making consistent with DWSD newly demonstrated interest in engaging our customers in critical decisions impacting them. This formalizes that interest in contractual terms.
- The Public Partnership reduces the risks identified with a 'go alone' solution, including further declines in use/sales (see graph), project cost overruns or schedule delays and other unforeseen costs inherent in starting a new venture. See Attachment 3
- The DWSD Board of Commissioners has previously approved sale of raw water from the Lake Huron facilities for raw water end use. We remain open to further discussion about the raw water capacity needs and stand ready to provide an affordable commodity option.

DWSD is an organization in transformation. In April of 2011, a new Board of Commissioners was seated with additional autonomy and more direct customer representation. In the past year we have demonstrated the ability to reduce costs, resolve long standing compliance issues and have gained support for establishing a new legal and operational model for DWSD that could enable broadened representation for Flint/Genesee on the Governing Board.

I remain available to discuss this proposal to assure that each of the issues critical to Flint/Genesee are addressed.

Best regards,

Sue McCormick, Director
Detroit Water and Sewerage Department

Cc: Andy Dillon, State Treasurer
Dayne Walling, Mayor – City of Flint
Kevyn Orr, City of Detroit Emergency Financial Manager

ELECTRONIC LETTER

April 16, 2013

Andy Dillon
State Treasurer
P. O. Box 30716
Lansing, MI 48909

Dear Treasurer Dillon:

Flint, Genesee County and KWA received an eight page letter from Detroit Water and Sewerage Department (DWSD) offering a framework for a long-term agreement with our region. Two scenarios were presented;

Scenario 1: Water from the Lake Huron Plant.

This offer was dismissed immediately because Flint would still be responsible for their share of the KWA water pipeline delivery system estimated to be $79 million. In addition Flint would not be able to operate the Flint Water Plant in which we have invested over $40 million per MDEQ mandates over the past ten years. Finally, although DWSD shows this as an option and supplied a per month cost projection for the first year, no total costs over the life of the contract were provided.

Scenario 2: "Full Service" Water Supply

This offer was also rejected. DWSD would supply water to Flint/Genesee the same way they currently are today. They would change the method of calculating our bill. The offer would provide a $1.00 per ccf reduction on our usage for the first year, providing a 30 year contract is signed.

After review of the offer, Flint/Genesee has the following concerns:

1. DWSD's offer is a framework subject to negotiations and is not a firm offer.

2. DWSD's offer is based on 40.6 mgd, the KWA plan is based on 60 mgd. Flint/Genesee last summer hit the peak of 40.6 mgd and this DWSD offer provides no room for growth. Growth would result in penalties or added cost.

3. DWSD's offer does not include a guaranteed rate for years two through thirty, nor does it provide a maximum annual increase.

4. DWSD's offer does not provide a redundant supply for GCDC.

5. DWSD's offer does not allow for the use of Flint's existing water plant.

6. The offer indicates that the total cost to Flint over the life of the contract would be $587,990,665. No indication of what annual rate of increase was used in this projection. Flint can only assume it is 4.4% based on the Tucker Young report. It is also based on 40.6 mgds. KWA's proposal is for $649,775,166 based on 60mgds (33% more). Based on 60 mgds DWSD's proposal would be $868,950,738.

On a final note, Flint/Genesee has great concern over the accuracy of the figures provided by DWSD. Attachment 1 indicates that our joint annual cost to DWSD is $50 million; actual cost is less than $25 million. Attachment 2 indicates $800 million in savings over the next 30 years. That is greater than the total cost we would pay DWSD.

Therefore, I will sign the resolution to join KWA at the close of business today.

Sincerely,

Edward J. Kurtz
Emergency Manager

ANALYSIS REPORT

TO: Edward Koryzno, Administrator; Office of Fiscal Responsibility

FROM: Eric Cline. Unit Operations Specialist

SUBJECT: Updated Flint Water System Status Assessment

DATE: February 21, 2013

Analysis Summary

On November 26, 2012, the Department of Treasury commissioned the firm of Tucker, Young, Jackson & Tull, Inc. (TYJT) to analyze options for the City of Flint to either remain a customer of the Detroit Water & Sewer Department (DWSD) or to join the Karegnondi Water Authority (KWA) in Genesee County. The overarching purpose of this study was to provide objective analyses to the State Treasurer and to Flint's Emergency Financial Manager (EFM) in order to secure potable drinking water for the City for the foreseeable future. The Office of Fiscal Responsibility (OFR) has been the lead office representing Treasury in this project.

On January 14, 2013, the State Treasurer requested responses to three questions: 1) Show the different, projected construction costs provided by TYJT and by the City of Flint/KWA. If these costs are different, explain why Treasury believes that the projects provided by Flint/KWA are acceptable; 2) identify the construction contingencies included in the TYJT and Flint/KWA projections; and 3) identify the options Flint will utilize in the event of a construction cost overrun or a delay in construction by KWA.

This has been a very difficult project to analyze because of the number of proposals to consider, differences of opinion about the conclusions of various engineering analyses that have been conducted, the fact that the analyses are comparing an existing, operational water system with one that has not yet been designed, and conditions within the City of Flint that make it difficult to assess their true water needs.

However, despite these difficulties, I believe that **KWA** presents the best future option to provide potable water for the City of Flint in the future. Long-term, KWA appears to be the cheaper option; the quality of water will almost certainly improve; Genesee County appears willing to assist the City in securing the financial resources for their portion of the project; this project could signify the beginning of better collaboration between the City of Flint and Genesee County; the KWA project has both political and popular support.

The following details how this recommendation was arrived at:

Background:

On December 21, 2012, staff from TYJT met with representatives from the Department of Treasury and the City of Flint to provide a preliminary report on their findings. At this meeting, TYJT outlined 5 options that they had analyzed. These options were: 1) 100% water provision by the City of Flint Water Plant from its water source of the Flint River; 2) 100% provision of untreated Lake Huron Water by KWA (which would require treatment by the Flint Water Plant); 3) Effective 100% provision of treated drinking water by DWSD; 4) Provision of variable amounts of water from DWSD through the existing Potter & Baxter master meter (this option called for Flint to treat and *blend* river water into DWSD water in order to reach their daily needs); and 5) Provision of variable amounts of water from DWSD through the 72" Imlay City main (this option also called for Flint to treat and *blend* river water into DWSD water in order to reach their daily needs). Each of the blending options looked at Flint purchasing 4, 8, or 12 Million Gallons per Day (MGD) from DWSD and blending the balance in river water to achieve their maximum daily water needs of 18 MGD. The Imlay City option also provided for DWSD to sell the 72" main to the City of Flint, which would then become the operational and maintenance responsibility of Flint.

From the presentation of the preliminary report on December 21 to the submission of the final report to the State by TYJT on January 29, 2013, a number of developments occurred that made analysis and arriving at a final decision very difficult. They were:

- DWSD provided the City of Flint with at least two modified proposals to consider.
- TYJT and Rowe Professional Services Company (Rowe), the principal engineering firm for KWA (and Genesee County and the City of Flint), began disputing the others' conclusions and estimates regarding the construction of the KWA pipeline.
- The Flint EFM also disputed several of TYJT's conclusions. At a January 10, 2013, meeting with Treasury, the EFM also eliminated the 100% Water Plant option, using the Flint River as a 100% water source (which was cheapest option, as determined by TYJT).
- At a January 10, 2013 meeting, Flint officials eliminated all of the DWSD Imlay City options (which were the cheapest DWSD options) over concerns of owning and maintaining the 72" water main. They also eliminated consideration of any of the blending options originally proposed to DWSD, in part over concerns of added costs to soften the water. This effectively left the only options remaining under consideration by Flint to be the 100% DWSD option (which TYJT estimated to be more expensive than either of the KWA cost options) or joining KWA.

I believe that TYJT's analysis was hampered by the very short timeframe in which they attempted to conduct this analysis; which, may have led to be being more conservative in some of their estimates. I believe that some of the comparable systems used in their analysis may not have been the best options but given that KWA is still in the design phase, may represent the best selection of comparable. I also believe, for whatever reasons, that all of the information (from both DWSD and KWA) TYJT needed to effectively analyze these options was not provided to them.

Projected Construction Costs:

Based upon the provided construction estimates, TYJT estimates the KWA construction costs at **$357.6-million**. KWA estimates construction costs at **$272.4-million**. TYJT states in their final report that they received "limited information" from KWA, which might have resulted in more conservative estimates.

The primary differences between the two estimates center around 1) the cost of constructing the pumping stations; 2) land acquisition costs; 3) contingency costs (discussed below); 4) the provision of

construction management services; 5) design costs; and 6) redundant power at the pumping stations. Cost estimates were reasonably similar by both firms in other areas except for those noted above.

The cost of constructing the pumping stations is the biggest difference between the two estimates (**$24.6-million vs. $54.5-million**). TYJT stated that they believe KWA had not designed the pumping stations to the point where more accurate numbers could be achieved. TYJT also stated that their estimates were based on construction costs for a similar project in SE Michigan. KWA maintains that construction costs in Genesee County are much lower than in SE Michigan and that they have extensive experience in construction projects that will help keep costs in-line. KWA has also stated that the construction of the transmission pipeline will be done by multiple contractors in order to save time and allow more Michigan contractors to bid on the project.

TYJT added **$1.2-million** to their estimates for land and easement acquisition. KWA has stated that they have already secured nearly all of the land and easement accesses needed for this project. It is likely that TYJT was unaware of this when they developed their estimates.

TYJT also added 5% (**$14.4-million**) to their estimated base cost for construction management services. TYJT has stated that KWA has not taken these costs into account. KWA maintains that they have accounted for them and these costs will not be that high.

Nearly **$18-million** was added to TYJT's estimates for design costs and legal work for the design of both the pumping stations and the transmission pipeline. KWA maintains that they have accounted for these expenses.

TYJT also included **$1.3-million** in new costs for standby power at the pumping stations. KWA has made no provisions for redundant power at the pumping facilities. TYJT included the provision of redundant power in their estimates and notes that this is an industry standard. KWA officials have stated that the new water plant will have redundant power but that the pumping stations will not. The stated reasons for not including redundant power were cost containment, that Flint can use the Flint River as a backup water supply in the event of an extended power outage and that the KWA systems' water storage capacity will allow for 7 days of reserve supply. KWA has also stated that they will look at installing standby power later but can utilize portable generators at the pumping stations, if necessary.

If the additional costs are not included, then the TYJT and the KWA estimates are within 5% of each other. This may/may not be acceptable differences, but I believe the only way to verify the accuracy of either estimate would be to utilize a third engineering firm to independently review both TYJT and KWA's estimates.

Project Contingency:

Construction contingency costs, also known as Engineering, Land, Administration, and Contingency costs (ELAC) are summarized in an attached chart developed by Rowe for the City of Flint. KWA/Rowe estimates total construction at $272.4-million, with **$53.2-million** (25%) for ELAC contingencies. County Water and Sewer Administrator John O'Brien clarified at a January 28, 2013 meeting that there is a 15% contingency for unforeseen issues and 10% "extra." TYJT estimates total construction at $357.6-million, with **$107.3-million** (30%) for ELAC contingencies.

TYJT stated that they believe that 25% ELAC for a project of this scope that is (at the time of the final report) less than 15% designed is insufficient; hence the more conservative estimate. The 5% difference in ELAC costs adds nearly $40-million to the TYJT estimate.

Construction Cost Overrun/Construction Delay Options:

The OFR is not aware of any contingency plans developed by either KWA or the City of Flint to address construction cost overruns or significant construction delays. The final TYJT Water Supply Assessment Report does reference an October 31, 2012 letter from KWA to EFM Kurtz in which KWA anticipates a "worse-case scenario" of a 15% cost overrun and a one-year operational delay. KWA projects, under this scenario, that water from DWSD would be cheaper than KWA until 2020 as opposed to 2016; reducing projected cumulative savings from $19-million to $3.9-million by Year 8 (2020).

County Drain Commissioner Jeff Wright stated at a January 28 meeting that, if necessary, KWA has the authority to borrow more funds to complete the project in the event that delays or cost overruns necessitate the borrowing of more funds. However, Mr. O'Brien also stated that the January 28 meeting that KWA expects to purchase insurance policies to insure against delays to the project. It has been suggested that a one-year delay in completion could increase project costs by as much as $20-million. Further discussion with Mr. O'Brien reveals that KWA is looking into purchasing a "wrap-around" policy against construction delays and a builders' risk policy; the costs of which are still being determined by KWA. Drain Commission Wright also indicated at the January 28 meeting that if construction bids come-in significantly higher than estimated that KWA will likely reassess its approach to this project.

Conclusions:

It is likely that TYJT's estimates are overly conservative. Their own analysis concludes that KWA's projections are cheaper than their estimate of the KWA project. Even with a 15% cost overrun and a one-year delay (Worst-case scenario), KWA's estimate is still lower than TYJT. All estimates for KWA are cheaper than the 100% DWSD option (all other DWSD options were eliminated from consideration by the EFM).

That is not to say that the KWA estimates are without fault. KWA is a new venture and the "unknowns" exist at the initial phases of the project. KWA has the potential to be the cheaper, long-term cost for the City of Flint after the bond debt for construction is retired. Significant construction delays and/or cost overruns could greatly add to the cost of this project, which could add to the financial burden on Flint.

Realistically, the true cost for this project will likely be in the middle of the two estimates. The bids for construction of the KWA lake water intake will be opened on February 26, 2013, with the expectation of presenting a recommendation for bid award on March 20. Comparison of the bids and the estimates for intake construction could be an indicator of the more valid estimate.

There are also some additional factors that are outside of the three questions asked by the State Treasurer that influence a final recommendation on this project. The first is DWSD. DWSD is a "known" entity and the system is already in-place and in operation. DWSD may also be the cheaper option in the short term. However, selecting DWSD requires a 30-year commitment and the unknown aspect of future rate increases is very concerning to Flint officials. EFM Kurtz has stated that the City has experienced rate volatility over the history of its relationship with DWSD. According to the EFM, the average historical annual rate increase for the City is **6.7%**, but over the past 10-years the average annual rate increase has been **10.5%**.

All estimates show KWA being cheaper to Flint than DWSD after capital costs are retired. There also appears to be considerable local resistance to continuing a relationship with DWSD.

The upfront costs and the premium water charges assessed by DWSD while KWA is being constructed are of great concern to City officials. Flint officials have indicated that approximately **$3.5-million** in capital upgrades is needed for the Water Plant if the KWA option is selected. However, at a January 28,

2013 meeting, County Drain Commissioner Wright indicated that Genesee County will permit Flint to participate in its revenue bond sale for KWA for Flint's 30% share of capacity in the KWA System and for plant upgrades. Given Flint's current financial situation, were this participation to occur, it will be a positive development for the City because it is likely Flint would have a very difficult time issuing bonds on the strength of its own credit rating. The Drain Commissioner also indicated a willingness to discuss how KWA might mitigate the $5- to $6-million cost of the "premium" rate that would be charged to the City of Flint by DWSD for the City to purchase water while KWA was being constructed.

On February 4, 2013, a proposal was received from EFM Kurtz that outlined a two-phased approach to resolve the cost of this premium charge. First, the City will transfer six miles of 72" water main owned by the City that extends into Genesee County in lieu of the **$2.3-million** up-front payment the City would have to make for construction of the KWA system. The second phase involves KWA entering into negotiations with DWSD to purchase their 72" water main that runs from Imlay City to Genesee County and agreeing to purchase water from DWSD for redundant purposes in-exchange for DWSD eliminating the **15%** premium rate to Flint during the three-year KWA construction period.

Recommendation:

A recommendation is being made to support the City of Flint joining KWA. Given, the conservatism of TYJT's estimates and the fact that all KWA estimates are cheaper than the 100% DWSD option, KWA appears to be the logical choice. EFM Kurtz has stated that he believes the KWA option is the cheaper alternative over time. There appears to be public support for the KWA project and EFM Kurtz has also stated that he believes that the Flint Mayor and City Council will support the KWA Project.

Also, the potential inclusion of Flint in the issuance of revenue bonds by Genesee County and the potential for KWA to assist the City in mitigating some of the DWSD premium charges could greatly reduce Flint's financial concerns.

There also appears to be good cooperation between City and County officials in discussing this project and this level of engagement and dialogue between city and county officials because of this project could continue to grow and lead to additional areas of cooperation and collaboration.

If further analysis on this issue is needed, please let me know.

S:\OFR\Cities\City of Flint\KWA Water Authority\UPDATED FLINT DWSD KWA ASSESSMENT.Version VIII.02-21-13.doc

STATE OF MICHIGAN CONTRACT NO. 271N3200089

CITY OF FLINT WATER SUPPLY ASSESSMENT

At the request of the Treasurer, Tucker, Young, Jackson, Tull, Inc. (TYJT) makes the following recommendation to the Department of Treasury concerning Flint's water supply alternatives. Based on the financial analysis performed of the various options presented by DWSD to continue treated water service to Flint compared to Flint being supplied by the new KWA untreated water system, TYJT believes that several of the options presented by DWSD are lower in cost currently and over the long run than the one offered by KWA. TYJT also believes that DWSD's most recent offer (subsequent to the submittal of our report) to build a smaller parallel water main from Imlay to Flint, funded by the entire DWSD base of customers, is the best solution offering the least cost alternative and the required redundancy by MDEQ.

Furthermore, since a majority of the KWA system has not been designed and none of the system has been constructed, there is an additional risk that the cost of the KWA system may actually be higher than estimated due to potential construction delays and unforeseen conditions. This risk to Flint could be substantial since the city is responsible for 30 percent of the KWA design and construction costs while still having to purchase water from DWSD during the construction period.

Finally, there are other issues that were identified in our report that may result in risks to Flint if it were to join KWA that should be considered by the Treasury in determining how Flint's potable water should be supplied. These issues are related to redundancy and reliability, other items affecting cost, and Flint's desire to control its own destiny related to its water supply. These are described further below.

- DWSD's supply to Flint is via a 72-inch water main from Imlay City. This main also supplies Imlay City, Mayfield and the Greater Lapeer County Utilities Authority (GLCUA). The volume of water contained within the 72-inch main is approximately 30 million gallons. If Genesee and Flint move to KWA then the three remaining communities' consumption would most likely not be large enough to maintain fresh water in DWSD's pipeline (due to loss of chlorine residual). DWSD may consider shutting down the 72-inch line completely due to the water quality concerns, which would then create an additional burden for Imlay, Mayfield and GLCUA to finance treated water supplies.
- The KWA supply option is counter to the Treasury's Competitive Grant Assistance Program (Formerly EVIP Grant). This program has been put in place to allow for communities to consolidate their services and save money. Two existing customers of DWSD (Flint and Genesee County) along with the potential of others customers (GLCUA, Mayfield, Imlay City) separating from another water system is in contradiction to the program.
- There is a concern over the ability of smaller systems (KWA) over larger systems (DWSD) to pay for future unfunded mandates and regulations. Obviously, identifying regulation requirements over 30 years is hard to determine. However, it is widely accepted that a large system has greater ability to respond to unfunded mandates because the cost can be distributed over a large customer base.
- Although Flint will be responsible for 30 percent of the construction cost, they will only have a minority vote on the KWA board. Furthermore, there are other communities (Lapeer County, the City of Lapeer, and Sanilac County) that sit on the board and vote. However, they are not purchasing water nor contributing to the construction costs. Their position on the KWA Board will not provide them an ability to "control their own destiny," as they have stated to the Treasury.

Subject: Mtg/call to discuss Flint Water
Location: Please see dial in information below.

Start: Thu 7/30/2015 8:00 AM
End: Thu 7/30/2015 8:45 AM

Gov. Rick Snyder announces formation of Flint Water After Action Report Commission

Experts will provide ongoing monitoring of city water system

LANSING, Mich. – Gov. Rick Snyder today announced a new task force to review the state's actions regarding water usage and testing in Flint. The commission will conduct a thorough review and lay out recommendations on future guidelines for water testing. It will also monitor the transition of Flint's city water system back to the Great Lakes Water Authority, and its eventual transition to the Karegnondi Water Authority pipeline.

The commission will be co-chaired by Ken Sikkema of Public Sector Consultants and Chris Kolb, of the Michigan Environmental Council. Also serving will be Dr. Matthew Davis of the University of Michigan Health System, and Eric Rothstein, of the Galardi Rothstein Group.

"As stated previously, transitioning back to the Great Lakes Water Authority is a good first step to protecting public health in Flint, but it's not the last step," Snyder said. "Bringing in outside experts to evaluate our actions and help monitor and advise on technical issues will be key to continuing work on the comprehensive action plan and ensuring safe drinking water for all the citizens of Flint."

Ken Sikkema is a senior policy fellow at Public Sector Consultants, where he specializes in public finance, environment, and energy policy. Prior to joining the firm, Sikkema served in both the Michigan House and Senate, culminating with four years as Senate Majority Leader. He has also served as both an adjunct and visiting professor at Grand Valley State University.

Chris Kolb is president of the Michigan Environmental Council, a statewide coalition of 70 environmental, public health and faith-based nonprofit groups. Before joining the MEC, Kolb represented Ann Arbor in the state House for six years and served eight years on the Ann Arbor City Council. He has been president of the MEC for eight years.

Matthew Davis, M.D., M.A.P.P., is Professor of Pediatrics and Internal Medicine at the University of Michigan Health System and Professor of Public Policy at the Gerald R. Ford School at the University of Michigan, having joined the faculty in 2000. He is the founding Director of the C.S. Mott Children's Hospital National Poll on Children's Health and the National Voices Project. Dr. Davis also previously served as the Chief Medical Executive of the Michigan Department of Community Health/Department of Health and Human Services.

Eric Rothstein is a national water issues consultant and principal at the Galardi Rothstein Group. He served as an independent advisor on the creation of the Great Lakes Water Authority. Rothstein also has served as Jefferson County, Alabama's rate consultant and municipal advisor for litigation related to the county's bankruptcy and issuance of $1.7 billion in sewer warrants and led strategic financial planning for the City of Atlanta's Department of Watershed Management. He has more than 30 years of experience in water, wastewater and stormwater utility finance and rate-making assessments.

As Gov. Snyder previously stated, reconnecting with the authority will not completely resolve the city's problem with lead service lines or aging infrastructure. It will take time for pipes in Flint to become coated with the phosphate corrosion control.

To best protect public health, state and local authorities will continue to carry out steps outlined on Oct. 2 in a comprehensive action plan, including continued testing, the use of faucet filters and providing residents with accurate information about steps to eliminate lead exposure. The Michigan Departments of Environmental Quality is continuing to provide free water filters, free lead testing through the state laboratory for Flint water customers, and hiring additional staff to conduct health exposure monitoring for lead in drinking water.

####

To: Governor Rick Snyder
From: JA
Re: Flint After Action Meeting
Date: October 20, 2015

Governor,

Attached is a draft press release to be reviewed with the after action team tomorrow morning.

In addition, Rich & Harvey are vetting & reaching out to potential Flint resident to join the task force:

1) Dr. Lawrence Reynolds, MD of Mott Children's Hospital, long standing and respected member of the Flint community, speaks his mind and very professional.

Rich will invite him to the meeting tomorrow by phone or in person.

Attached are resumes for Kolb, Dr. Davis, and Eric Rothstein.

Draft Agenda:

1) Introductions
2) Mission of Task Force
3) Background Info
4) Discussion of Timeline
5) Q & A from Task Force Members
6) Communications Strategy/Review Press Release

Suggested Goals for Task Force:

1) Thorough review of all steps taken in Flint regarding switch to Flint River and back GLWA.
    a. Create Timeline of actions
    b. Establish why each action was taken
2) Review of role of Feds, EM, State, City Council, and Mayor in process.
    a. Establish best practices for Feds, State, Local, and EM to work together in future situations
    b. Indicate where coordination could have been and should be improved
3) Review of DEQ & DHHS actions & protocols
    a. Did DEQ & DHHS follow the proper procedures?
    b. Do the procedures need to change?
4) Provide guidance for switch back to GWLA
    a. Ensure proper corrosion controls & testing is in place
    b. Highlight steps for eventual switch to Karegnondi
5) Testing Beyond Flint
    a. What practices need to change in communities outside of Flint?
    b. What change in law is recommended to ensure all Michiganders are drinking clean water?

Suggested Timeline:

The task force members have indicated that 2 months is the earliest possible time to properly conduct a full after action report. In reality, they suggest 3 months is more feasible. Given the holidays, a 2 month timeline puts us roughly right around Christmas. I would suggest we set a 3 month goal.

Oct 21: After Action Team Announced
Jan 8: Preliminary After Action Report Submitted for Internal Review
Jan 22: Final After Action Report Submitted
Week of January 25: Report Released

Organizer: Muchmore, Dennis (GOV)
Required Attendees: Nick A. Khouri (KhouriN@michigan.gov); Workman, Wayne (TREASURY); Saxton, Thomas (Treasury) (SaxtonT@michigan.gov); Agen, Jarrod (GOV); Harvey Hollins (hollinsh@michigan.gov); Clayton, Stacie (GOV); Dempkowski, Angela (Treasury); Pleyte, Beth (Treasury); Doyle, Maureen (Treasury)

PPI

PPI Dennis to host

Subject:	RDS/DM/JA/EC/RB/DMurray/HH/DWyant/NLyon/MAnderson - Flint After Action Call
Location:	By Phone
Start:	Tue 11/24/2015 4:30 PM
End:	Tue 11/24/2015 5:00 PM
Show Time As:	Tentative
Recurrence:	(none)
Meeting Status:	Not yet responded
Organizer:	GovCalendar
Required Attendees:	Baird, Richard (GOV); Muchmore, Dennis (GOV); Clement, Elizabeth (GOV); Agen, Jarrod (GOV); Wisniewski, Wendy (GOV); Hollins, Harvey (GOV); Clayton, Stacie (GOV); Wyant, Dan (DEQ); Thelen, Mary Beth (DEQ); Lyon, Nick (DHHS); Scott, Allison (GOV); Murray, David (GOV); Anderson, Madhu (DEQ)

Call In:

PPI

Purpose: Per RB

Participants:
Matt Davis, Professor of Pediatrics & Internal Medicine U of M
Chris Kolb, President – Michigan Environmental Council
Ken Sikkema, Senior Policy Fellow – Public Sector Consultants
Eric Rothstein, Principal – Galardi & Rothstein Group
Larry Reynolds, Pediatrician Mott Children's Health Center

City of Flint Wednesday 9:00am Phone Conference Agenda
September 17, 2014

1) **Public Safety Update – FPD, MSP, (FFD, if needed)**

Not Responsive

2) **Governor's Office Update – R. Baird, H. Hollins, B. Clement**

Not Responsive

3) **Lawsuits – Status, Issues**

Not Responsive

4) **Financial and Administrative Update**

Not Responsive

5) **City Council Update**

Not Responsive

6) **Blue Ribbon Committee on Governance**

Not Responsive

7) **Water Issues**
   a) Two more areas had five day boil-water notices – resolved, broken 24" valve was a major contributor to the problem.
   b) Flint will continue to investigate why conditions develop which are favorable for more severe problems to occur. Pursuing these investigations may include seeking additional professional assistance to review both systems and processes.

c) General Motors Water Issues – working through lawyers at this point. However, if this should become an issue for the GCDC with DWSD we would hope Treasury will be supportive of the GM-GCDC franchise customer agreement.

8) Messaging

Not Responsive

9) 9-1-1 Reconsolidation Plan

Not Responsive

10) Recruitment and Selection of City Administrator/Manager

CITY OF FLINT

OFFICE OF THE EMERGENCY MANAGER

Gerald Ambrose
Emergency Manager

TO: President Joshua Freeman, Flint City Council
Flint City Council Members

FROM: Jerry Ambrose, Emergency Manager

DATE: January 16, 2015

RE: Update

As the new Emergency Manager of Flint, I look forward to working with you over the next several months as we continue progress towards a sustainable and financially secure city government. As I stated at the time of my appointment, my focus over the next several months is to transition the city from oversight by an Emergency Manager to home rule under the guidance of a Receivership Transition Advisory Board. This will be done by continuing to achieve the expectations set forth in the Seven Point Transition Plan. Assuming those expectations are met, I currently expect such transition to occur sometime during the month of April, 2015.

The progress which has been made is detailed in the attached status report. While progress has been made, there are numerous steps yet to be taken. Many will involve the City Council, including:

- Final adoption of the Capital Improvements Plan
- Final adoption of ordinances regarding planning, budgeting, fund balance, deficit elimination, purchasing, and others which are necessary to establish the organizational structure upon transition
- Completion of training requirements for Council members
- Adoption of an updated Strategic Plan from the FY15/FY19 Plan to the FY16/FY20 Plan
- Adoption of budget priorities for development of the FY16/FY17 budget

I will be working with the City Council, Mayor Walling, City staff and the new City Administrator Natasha Henderson to assure that we can achieve these, and other necessary steps.

There are other issues which we will all continue to address. One primary issue, of course, is the issue of water quality. We all know it is a very serious concern, and our staff is working every day to improve water quality. The plan articulated by former Emergency Manager Darnell Earley, which does not include reconnecting to DWSD, remains in place at this time. This week, as promised, the City released an RFP to secure the services of a firm with experience in improving water quality where the source of water is a river. We also posted on the City's web site answers to some questions which have been raised in the community. We will continue to add information as it becomes available. We are also planning on an informational meeting next week to continue addressing citizen concerns.

Another issue is the low level of resources available to address public safety issues in the City. As you know, we commissioned an independent study of our police and fire organization in order to assess our capacity and to determine how to best organize our police and fire departments in light of their diminished resources. The results of that study are being presented next week at the Council's Public Safety meeting, and will provide guidance as we consider the upcoming FY16 and FY17 plans and budgets.

Finally the issues surrounding water and public safety emphasize the tenuous financial situation of the City – one which, while significantly improved, will remain tight. The five year financial projections done last year, and the adopted budgets for FY15 and FY16, showed financial stability for FY15 and FY26, but projected a very significant gat between revenues and expenses for FY17. Regardless of whether or not the City remains under the control of an Emergency Manager, balancing the FY17 budget in a financially responsible manner will be a challenging task. If decisions become necessary to further reduce the workforce and service levels, they will be very difficult, as there are no easy answers. Likewise, responding to demands for high levels of service and lower costs in the form of water rates or taxes will also be difficult.

Achieving our objectives will take time and effort for all involved. In the next week, the Finance Committee will be meeting on Wednesday to review the second quarter Progress Report on the Strategic Plan, and the same evening will be a City-sponsored forum on water issues. Next Thursday, the Public Safety Committee will meet to review the results of the ICMA Police and Fire study. The following Monday, January 26, will be the regular Council meeting, where the FY14 audit will be presented and where the Council will consider adoption of the Capital Improvement Plan, as well as second reading and final adoption of the strategic planning and budgetary ordinances.

Looking further forward, the Council will be engaged in updating the Strategic Plan, beginning with a workshop on Wednesday, January 28th. It is anticipated that a special Finance Committee meeting will be necessary for February 4th, in order that Council can consider adoption of the framework of the updated Strategic Plan on Monday, February 9th.

Over the next several weeks I will be working with City staff to develop a tentative calendar of events which will guide the budget preparation process and other items which I feel need to be completed prior to transition.

This is an aggressive agenda for all of us. I believe it is critical to have in place the many pieces necessary to both prepare for a successful transition, and more importantly, so that the City of Flint continues on a path of sustainability and financial stability.

For Immediate Release

City of Flint Will Hold Public Water Presentation Wednesday, January 21, 2015 at 7:00pm in the City Hall Dome

Flint, Michigan – January 16, 2015 – The City of Flint will be hosting a water presentation on Wednesday, January 21, 2015 at 7pm. That presentation will be held in the City Hall Dome and will feature information detailing water treatment, water distribution and the steps being taken to ensure that citizens get water that meets all regulatory safety and quality standards. "We want the residents, businesses and visitors of Flint to know that the water in Flint is safe and that we are working every day to make improvements to our system to ensure that," said City DPW Director Howard Croft. "Our goal is make sure we get people the information on our efforts and assure them that we are on the right track with them."

DPW Director Croft and Utilities Administrator Daugherty Johnson will be joined on a panel by representatives from the Genesee County Drain Commissioner's office, the Michigan Department of Environmental Quality and LAN engineering. Written questions from the audience will be collected during the presentation and answered by the panel after the presentation.

–END–

Addressing Flint's Water Concerns

Recent events have raised concerns among many as to the safety and quality of the water provided by the City's utility system. The City is and continues to be committed to assuring that residents and visitors know that the water is safe and that those responsible for providing water are working every day to improve the quality of the water. The quality of the water does need improvement, but that is not to be confused with safety of the water. The recent notice by MDEQ clearly stated that the water provided by the utility system is safe to drink, but cautioned that some vulnerable groups may want to consult with their health care provider if they have concerns. The City remains committed to their efforts to assure that the water is safe for everyone and that quality is both improved and improving.

To date, the City has taken the following actions:

- As an integral part of the transition to the Flint River on a temporary basis, the MDEQ was consulted about the City's plans, and ultimately issued necessary permits to proceed. The City also engaged the services of the LAN engineering firm to guide the city in installing the necessary equipment to treat the water on an ongoing basis. This resulted in the development of a comprehensive drinking water plan.

- The City monitors its water quality on a daily basis to assure that water quality remains within established guidelines. With the variances in water temperature and the leakage and infiltration problems arising as the result of failure of parts of the distribution system, water quality did exceed, for a time, some of the established guidelines. This resulted in the issuance of the recent notices to the public. Upon receipt of information that some guidelines were exceeded, the City's priority focus was to bring water quality back within guidelines. Efforts taken to address non-compliance included increasing water flow through valve replacements and hydrant flushing and optimizing treatment processes.

- The City has committed to increasing communication with the public in order to inform water users factually of the issues which have arisen, to alleviate unnecessary concern and to identify the steps being taken to address the issues. This is being implemented through detailed and easy to understand educational materials being made available both online and at City Hall, as well as through ongoing public informational meetings.

- Most recently, in light of recent concerns raised by resident groups over the quality and safety of water, Department of Public Works Director Howard Croft and his staff collected questions from citizens during a recent public meeting. After reviewing these questions, DPW Director Croft and his staff set out to answer them in concise detail; the result of that work is a full Water System Questions and Answers document is available online. Along with the detailed information within, the document also contains links to other source documents and regulatory statutes found online which were used as reference. **"We want the residents, businesses and visitors of Flint to know that the water in Flint is safe**

and that we are working every day to make improvements to our system to ensure that," said Croft. "Our goal is make sure we get people the information on our efforts and assure them that we are on the right track with them." More documentation, including regular water quality monitoring reports, will be made available.

- Additionally, a number of public meetings have and will continue to take place. Two of the most recent of these took place at the Antioch Baptist Church and the Mott Community College Regional Technology Center. These meetings were held by concerned neighborhood groups and were attended by Mayor Walling and DPW Director Croft. At both meetings, citizens voiced their concerns and asked questions about water quality and the recent violation notice. Director Croft offered detailed answers to common questions, but also offered to investigate specific water issues raised by residents in which the City could offer assistance. Those in attendance came away with a better understanding of the issues surrounding the drinking water in their community.

- The City of Flint will be hosting a water presentation on **Wednesday, January 21, 2015 at 7pm. That presentation will be held in the City Hall Dome** and will feature information detailing water treatment, water distribution and the steps being taken to ensure that citizens get water that meets all regulatory safety and quality standards. City DPW Director Howard Croft and Daugherty Johnson, Utilities Administrator, will be joined on a panel by representatives from the Genesee County Drain Commissioner's office, the Michigan Department of Environmental Quality and LAN engineering. Written questions from the audience will be collected during the presentation and answered by the panel after the presentation.

- The City of Flint has also determined that in light of the serious concerns raised, it will secure the services of an external firm with expertise in managing drinking water quality to assess the steps that the city has taken, to make recommendations as to other steps to be taken, to oversee their implementation, and to monitor operations until the City's water source becomes the KWA. A Request for Proposal was issued on January 15, 2015, with proposals due back on January 26.

The DWSD Question:

As a result of the concerns raised, several community members have suggested that the City reconnect to the Detroit Water and Sewer Department (DWSD). DWSD has advised that they would be willing to allow such a reconnection without a hook-up fee. However, the City would be obligated to pay a fixed monthly charge of $846,700 plus the $14.92/Mcf cost of water itself and agree to a long term arrangement. The City's analysis of the DWSD proposal concludes that the City's cost would increase by more than $12 million per year at the proposed rates, and could increase even more as proposed rates are subject to change after July 1, 2015. This increase in costs would not be in the best interests of the City or its water users, as the City is committed to assuring safety and improving water quality by following its current plan, and reconnecting to DWSD would likely require deferment of existing capital improvements or an additional increase in rates.

RE: Water Questions

DATE: January 13, 2015

Prelude

The decision to switch to the Karegnondi Water Authority as the City's permanent water source was made following extensive research and in-depth engineering studies. After entering into a contract with KWA and the subsequent termination of the existing water service contract by the Detroit Water and Sewerage Department, the same diligence was given in determining what source water to use while waiting for the community supported KWA water to arrive. The City concluded from this work that the Flint River presented a safe and financially responsible alternative water source. The decision to use the Flint River as an intermediate water source was approved by state regulatory officials in 2014 whereby the City was permitted by the Michigan Department of Environmental Quality to proceed with treatment of water from the Flint River.

The following questions were presented by concerned citizens, and the City's responses follow. This document will be put on the City's website for public viewing within the next several days.

1. What was the process by which the decision was made to switch from Detroit water to Flint River water? Who was responsible for what decisions?

On March 25th, 2013, after evaluating cost comparisons for a permanent water source, the Flint City Council, with support from the Mayor, voted 7 – 1 approving a resolution to purchase water from the Karegnondi Water Authority (KWA). On March 29th, resolution 2013EM041 was signed, authorizing the City of Flint to enter into a contract with the KWA.

On April 16th, 2013, then Emergency Manager Ed Kurtz, signed the contract effectively purchasing 18 MGD of capacity from the KWA.

On April 17th, 2013 Detroit Water and Sewerage Department (DWSD) sent a letter terminating the existing water service contract between the City of Flint and Detroit. With the termination set to take effect 12 months later on April 17th, 2014, a gap was created between the end of the DWSD contract and the start of the KWA.

On June 29th, 2013, following many preliminary discussions on how the City would fill the interim gap, a formal, all day meeting was held at the Flint Water Plant with all interested parties including City of Flint Officials (COF), representatives from the Genesee County Drain Commissioners Office (GCDC), the Michigan Department of Environmental Quality (DEQ), and the design engineers from the previous plant upgrade Lockwood, Andrews, and Newnam (LAN).

The purpose and agenda of the meeting was to determine the feasibility of the following items:

1. Using the Flint River as a Water Source
2. The ability to perform the necessary upgrades to the Treatment Plant
3. The ability to perform quality control
4. The ability for Flint to provide water to Genesee County
5. The ability to meet an April/May 2014 timeline
6. Development of a cost analysis

The conversation was guided with focus on the engineering, regulatory, and quality aspects of each item listed. The resulting determinations were made.

1. Yes, the Flint River would be more difficult to treat but is viable as a source.
2. Yes, it was possible to engineer and construct the upgrades needed for the treatment process.
3. Yes, with support from LAN engineering which works with several water systems around the state, quality control could be addressed.
4. No, the Flint treatment plant would not have the capacity needed to treat and distribute sufficient water to meet the documented needs of Flint and Genesee County.
5. Possible, it was determined that many obstacles needed to be overcome but completion by the April/May 2014 target was reachable.
6. Next steps from the meeting were for LAN to present the City with a proposal that would include engineering, procurement, and construction needs for the project along with cost estimates.

As a result of extensive evaluation, discussions with the professional engineers, and consulting the state regulators, the Department of Public Works along with the Finance Department recommended utilizing the Flint River as a temporary water source while waiting for the KWA to come online. The plan to accomplish this was accompanied with a construction timeline, a needs analysis for resources, and an FY 14 spending plan to complete the project.

2. Was it known prior to the switch that there would be problems managing total coliform and fecal coliform bacteria levels in the water?

It was understood that the Flint River would be subject to temperature variations, rain events, and have higher organic carbon than Lake Huron water and would be more difficult to treat. These facts were balanced against a licensed staff, LAN engineering's extensive experience in this field, advanced equipment that Flint has for treatment, and support from the DEQ.

3. What were the projected costs and benefits of the switch, and what have been the actual costs and benefits?

The engineered costs for upgrading the Flint Plant to treat KWA water from Lake Huron were projected to be ~$9,000,000. These upgrades need to be in place prior to KWA water reaching Flint and are coupled with an additional ~$3,500,000 in annual operational expenses for workforce additions, electricity costs, and process equipment for a total of ~$12,500,000.

The final year that the City of Flint purchased water from DWSD, the cost was $12,400,000 and that cost was projected to rise to ~$14,400,000 in 2014 and increase to ~$16,000,000 in 2015.

The financial benefit for switching to the river was the opportunity to divert that revenue towards capitalizing the upgrade expenditures needed to run the plant and the development of a capital improvement program for the aged infrastructure without a significant increase to the water bill. This aspect was figured into the cost analysis at the time of the recommendation.

Based on the current DWSD rate structure, it appears that the actual costs to purchase water this year would have been higher than projected, The fixed cost would have been ~$5,100,000 and the additional commodity or water costs would have resulted in another ~$11,000,000 given the City's current water usage. This would result in an estimated ~$16,000,000 in this year alone.

The upgrade expenditures stayed close to the engineered projections. The improvements at the water plant cost ~$7,000,000, the remediation and development of Bray Rd for lime disposal cost ~$1,700,000 and the increased operational costs so far this year are below the estimates and on target to finish the year at ~$3,000,000. These changes come to a total of ~$11,700,000 of necessary expenditures in the first year.

In addition to the ability to capitalize the upgrades, switching to the Flint River has allowed us to develop a Capital Improvement Plan for the Utility Department that will begin replacing pipe underground this spring and will account for overdue maintenance concerns such as valve replacements, and pipe lining extending the useful life of the system and allowing us to deliver better quality water.

It would have required close to a 30% raise in the water and sewer bill to accomplish this without using the Flint River as a source.

4. What were the causes of increased levels of trihalomethanes? Have those causes been sufficiently addressed? If not, what needs to be done to prevent this from occurring again in the future?

Just as low levels of chlorine can produce coliforms, high levels of chlorine can result in Disinfectant Byproducts (DBP) generating increased levels of trihalomethanes (TTHM). The DEQ requires this testing to occur once every three months at each of the testing sites and looks at an average over four quarters (one year) to determine the level to compare against the maximum contaminant level (MCL).

Research by the Science Advisory Board, the National Academy of Sciences, and the USEPA's Carcinogen Assessment Group predicts risk estimates associated with high levels of TTHM at an incremental risk of 3 to 4 people out of 10,000 that consume 2 liters of water over the MCL daily for 70 years.

The required remedy for this violation is to present the DEQ with an Operational Evaluation Report that assesses what caused the violation and what the proposed remedy is. The City generated a report to the DEQ in November 2014, which assesses each area of the Flint water system including water source, treatment process, and distribution system. The evaluation was complete with short and long term recommendations to optimize each area and the belief that the items listed would correct the violation and give Flint an increased ability to manage the system. Continued repairs on valves and colder temperatures have created a more consistent chemical footprint, and we have been producing a more consistent water quality.

5. What were the causes of increased levels of total coliform and fecal coliform bacteria levels? Have those causes been sufficiently addressed? If not, what needs to be done to prevent this from occurring in the future?

What we discovered is that as water travels through the 600 miles of the City's distribution mains it will, at times, reside in the system for up to 3 or 4 weeks. Water purchased from DWSD is drawn from Lake Huron, chlorinated, and then travels over 80 miles to reach the City. By the time the water reaches Flint it is stable and capable of withstanding this type of residency time within the system. Water drawn from the Flint River, specifically in summer months when the temperature is fluctuating, is more susceptible to being impacted by variables such as high residency times and increased chemical reaction.

The DEQ requires that a minimum of 100 tests be performed monthly for chlorine residuals at various locations throughout the system. When residual levels are too low, it creates an environment in which bacteria such as fecal coliform can grow. After switching sources, we encountered testing sites in June, 2014 that were consistently returning low residual levels. Several of these sites became areas that total coliform was eventually detected and ultimately boil water notices issued.

Low residual levels can sometimes trigger a positive test result for total coliform which is an indicator of a poor water environment but does not generally require a boil water notice. The normal course of action in these situations is to flush hydrants and introduce fresh water into the defined area. In certain areas this was successful and in other areas it was not. In a second course of action, the EPA also allows for water systems to increase the residual disinfectant, including chlorine, to a level and for a time necessary to protect public health. This information can be found in the EPA manual (40 CFR 141.65 & 141.130(d)). In contending with the low residual levels which represent a more immediate health concern along with the potential for tier 1 violations and boil water notices, we increased the chlorination treatment at times in order to combat the low residuals. This was also was an unsuccessful remedy and only after we located and replaced valves that were broken in the closed position on major transmission lines in these areas did the residual levels return to normal and have remained that way since.

There is still one test site, in the 2500 block of Flushing Rd, where we continue to experience low residual levels and we are actively pursuing efforts to locate more expected valve failures. The development of a hydraulic model of the system and the ability to use unidirectional flushing are tools that will assist us in mitigating areas where low residuals surface. Both of these are in progress of being developed by the engineering firm LAN and Potter Consulting who was also the author of our Water Reliability Study.

6. What are the public reporting requirements for these sorts of problems, and has the City met those requirements? What can be done to communicate in a more timely manner useful information about a public health threat such as the presence of cancer-causing chemicals in our drinking water?

The EPA 2010 "Revised Public Notification Handbook" has a specific breakdown of the elements required in public notifications and includes usable templates. The EPA has three different tiers associated with community water systems (CWS), each with specific timeframes and requirements that trigger upon issuance of the violation.

* Tier 1. CWS must provide public notification within 24 hours of a violation and continue this as directed by the primary agency.
* Tier 2. CWS must provide public notification within 30 days of a violation and continue this every three months until the violation is resolved
* Tier 3. CWS must provide public notification within one year and the EPA recommends repeat occurrences be provided in an annual notice

The current EPA violation is classified as a tier 2 violation and was issued December 16th, 2014.

Moving forward, the City of Flint is striving to increase communication with the public in a variety of ways.

- The city's new website will have current news and information updated on a regular basis.
- Increased data collection will be transitioned into real time ability to communicate with the residents through the Public Works area of the City's new website.
- Timely reporting of current test results on the new City website.

The establishment of these tools is in progress and expected to be implemented in the near future along with evaluating other avenues of communication.

7. **Is there any reason to think that these or similar problems will continue even after the shift is made to water from Lake Huron?**

The water coming from Lake Huron via KWA will be more consistent in temperature, have lower organic carbon, and will be less susceptible to variations but will have its own chemical footprint. The construction upgrades to the Flint Treatment Plant give us the ability to draw water from either source and should provide Flint the opportunity for testing and thereby streamlining the treatment process to match the Lake Huron chemical footprint before fully introducing it into the distribution system.

In addition to new source water, following the recommendations contained in the Operational Evaluation Report and the City's Water Reliability Study is the roadmap to being able to provide quality water.

Continuing to identify integrity issues and making preemptive repairs within our antiquated infrastructure are needed to maintain and provide a healthy system. Leak detection which is scheduled for the spring, hydraulic system modeling which includes unidirectional flushing is in progress now and will give us the information and tools to accomplish these goals.

8. **Who is responsible for making sure we don't have these sorts of problems, and did that person or those people fail to meet their responsibilities?**

The Utility Department is a Division underneath the Department of Public Works. The Public Works Director along with the Utilities Administrator will continue to work hand in hand with professional engineers, consultants, and the state regulatory agency DEQ in order to manage increased public communication and address any issues that arise going forward.

The DEQ requires that public water systems with population over 20,000 must have an F-1 state licensed operator in charge that oversees the operation of the treatment process. This license is the highest classification in the state that specializes in "complete treatment" The City of Flint has such a person on staff at the water plant and that person's responsibility is to determine the correct levels of chemical treatment, monitor the system, submit official test results to the state regulatory agency, and make necessary adjustments when contaminant levels are breached. All of these steps were followed and acknowledged by the DEQ.

The following is the list of supporting documents that will be available on the City's website for public viewing.

The Honorable Rick Snyder
Governor, State of Michigan
P.O. Box 30013
Lansing, MI 48909

RE: Flint Water Improvement Plan

Dear Governor Snyder:

On behalf of the Flint community, I am writing to convey serious concerns about water quality and to request your support for my proposed Flint Water Improvement Plan. Access to safe and clean water is a basic human right, and, therefore, policy and budget decisions need to ensure that water is affordable and secure for everyone in Flint and all across Michigan It is essential there is City, State and Federal cooperation to address the challenges here and to meet the needs of vulnerable populations.

The Flint Water Improvement Plan is focused in five areas: safety, quality, access, investment and education. The plan puts safety and quality first because this is fundamental. It is designed to be a sustainable solution for the City of Flint and the community as we move towards a new permanent water supply from Lake Huron through the Karegnondi Water Authority. My plan offers new ideas and also builds on successful models of utility, energy and assistance programs at the State and Federal levels.

Safety & Quality

- 100% Safety is the standard
- City of Flint reports testing data to the public to assure safety and expands testing sites and frequency
- Bring on experienced river water treatment operational management in the City of Flint

Access

- Announce an amnesty program for Flint water service turn-ons and reduce the turn-on fee
- Develop a revised affordable payment plan policy to encourage customers to return
- Design Federal and State partnership to establish new Drinking Water Emergency Assistance Fund for the elderly and vulnerable families

Investment

- Accelerate water system improvements outlined in the City of Flint Capital Improvement Plan through Federal and State investments
    - State approves City of Flint's Distressed Cities Fund applications

- Federal and State support for replacement or forgiveness of payment to the Drinking Water Revolving Loan Fund due to Flint's status as a distressed community
- Federal and State grants for infrastructure improvements in alignment with the Flint Master Plan

* City Water Department implements budgeted FY15 projects including leak detection, valve repairs, new pipes and meter replacements

Education

* Develop a community partnership with universities to provide household and business customers with information on testing and conservation
* Ongoing partnership with Michigan Department of Human Services, United Way, Salvation Army and community organizations to provide information and water assistance with the Keep the Water Flowing Fund and support services
* Expand youth energy initiative to assist households with conservation and efficiency (piloted in summer 2014 with Northwestern High School students, EcoWorks and Consumers Energy)

It is also critical to restore the public confidence in Flint Water. The implementation of this plan must be accompanied by extensive community engagement including local elected officials. My objective is to work with you and your appointed officials, State Senator Ananich, State Representatives Phelps and Neeley, Congressman Kildee, community groups, businesses, churches, foundations, the Flint City Council, and all of the City of Flint and government personnel.

It is imperative that we communicate better and provide residents more information. I understand representatives from the Michigan Department of Environmental Quality will be joining a public forum this week at City Hall. This engagement going forward is vital so thank you for supporting their efforts. I think this issue of transparency is important for communities all across the State. I recommend a review of the applicable laws and policies and, at a minimum, a new requirement that water testing data be reported publicly no less than quarterly by law in all Michigan communities in Flint's population category.

Thank you for the consideration Governor. There is nothing more important in Flint right now than fixing the water problems. We must work together to identify funds to repair and update the water treatment facilities and city-wide infrastructure and to help those persons without access to clean water so that the entire Flint community has sustainable, safe, secure and affordable water now and into the future. This is an important issue for the state of our State of Michigan and I urge you to work with us to implement solutions.

Sincerely,

Dayne Walling, Mayor
City of Flint

CC: Flint City Council President Joshua Freeman; Congressman Dan Kildee; State Senator Jim Ananich; State Representative Sheldon Neeley; State Representative Phil Phelps; Flint Emergency Manager Jerry Ambrose

Mayor Dayne Walling
Natasha L. Henderson, City Administrator

DATE: April 13, 2014

RE: Update and Transition Progress

Thank you for your consideration of my request for authorization to apply for the $7 million loan from the State's Emergency Loan Board. This loan, if approved, will be used to eliminate the City's General Fund deficit ahead of the schedule in our current Deficit Elimination/Reserve Accumulation Plan. This will enable the City to move forward with building adequate reserves necessary to foster financial stability. This, along with the commitments established in ordinance to develop and maintain a multi-year budget based on a strategic plan and to address the funding of long term liabilities, Flint's financial solvency can be sustainable.

Thank you also for your consideration of the proposed consolidation of the 68th and 67th District Court, an action which has been long in the making. Recommended by the State Court Administrators Office and authorized by state law, the consolidation is planned to become effective January 2, 2016. The Memorandum of Understanding, approved today by the Genesee County Board of Commissioners, details the advantages the consolidation will have for the City of Flint. The city will see a reduction in costs of more than $8.4 million over the first 10 years, providing some much needed funds to support police services. Additionally the new court division is assured of at least 2 probation officers, something which the Court has not had for several years. And, as provided in both law and the agreement, judges will continue to be elected from within the City.

As you know, my focus over the past few months has been and continues to be transitioning the City from oversight by an Emergency Manager to home rule under the guidance of a Receivership Transition Advisory Board.

Much progress has been made in preparing for the transition, including action by the City Council to complete the following:

- Final adoption of the Capital Improvements Plan
- Final adoption of ordinances regarding planning, budgeting, funds balance, and deficit elimination
- Update of the Strategic Plan's Vison, Mission, and Goals
- Adoption of budget priorities to guide development of the FY16/FY17 budget

Additionally, our new City Administrator Natasha Henderson is on board and is assuming duties as the experienced and professionally trained chief administrative officer for the City.

There are several issues which we are continuing to address, including:

- Water safety, quality, and affordability continues to be a top priority. The City's water supply today is safe, as measured by the same MDEQ standards that have been in place for years, and steps are being taken to improve treatment and distribution processes in order to address issues of discoloration and odor, and to assure continued safety. Reviews of our pricing structure are also underway to assure that customers are treated equitably while generating sufficient revenue to operate the system.

  Public safety continues to be an area of critical concern. The independent study of our police and fire organization provided a number of recommendations focused on how to best deploy the resources we have, and also confirmed that the staffing levels afforded by our limited resources are extremely low in comparison to comparable municipalities. This emphasizes the critical continuing importance of renewing the two voter-approved public safety millages and working to assure continuing state support through the assignment of state troopers and through financial support of the City lock-up. Loss of any of this support would be a disaster for the City.

- Achieving and then maintaining financial stability will continue to require constant attention. Approval of the ordinances regarding financial stability and the anticipated approval of the $7 million loan provide additional tools with which to work. Attention will need to be paid to not only developing and adopting budgets for FY16 and FY17 but doing so in the context of understanding the impact of those budgetary decisions into the following three years. Essential to this is making the budget decisions which truly address achievement of the stated vison, mission and goals for the City as adopted by the City Council. Unfortunately, the challenges in doing so will be great, as the City will continue to be faced with the reality of a structural deficit, where for the foreseeable future current expenditure patterns exceed revenue streams – a difficult position, given the City's already low level of services. Complicating this further is the potential impact of the retiree health care lawsuit, once the final outcome is decided.

- Finally progress continues with modernizing the operations of the City and setting the framework for future development. With the Master Plan and Capital Improvement Plan in place, focus is now turning to implementation, including updating the Zoning Ordinance.

As we move forward with preparing for transition, there is much work yet to do. Today I am taking three actions consistent with our path:

- Adoption of an updated purchasing policy – I am enacting the revisions to the Purchasing policy which were reviewed by Council within the past few months. These changes are made with the goal of assuring that the process of obtaining goods and services is consistent with the expectations of the Strategic Plan. There must be proper oversight and transparency, with a goal of obtaining goods and services that best meet the needs of City departments. The process must ensure competitive procurement, conducted in a timely and ethical manner. The City Council has an important role in assuring compliance with the policy, which is not the same as conducting purchasing operations.

- Confirming the role of the City Administrator – Before the search for a new City Administrator was begun, it was determined, within the context of the Seven Point Transition Plan, that an experienced and professional City Administrator would be selected on the basis of an open competitive process, and that the duties of the City Administrator would be structured in a manner which assures the ability to manage and direct the administrative affairs of the City in a professional manner. While those duties and expectations were described in the job description of the City Administrator and in recruitment materials, I am now formally enacting them in Emergency Manager Order Number 3.

- Re-establishing salaries for Mayor and Council – As we are moving towards transition, the duties and responsibilities of the Mayor and City Council are expanding towards the traditional roles of a City operating under home rule. Council meetings are now held twice per month, with committee meetings held once per month. The Mayor is now much more engaged in a Chief Executive role. Consequently, I have determined to re-establish the salaries for Mayor and Council at the levels in place immediately prior to the appointment of an Emergency Manager in November, 2011. Continued receipt of the re-established salaries, however, is contingent upon attainment of certain training. The re-established levels, and the contingency regarding training, is found in Emergency Manager Order Number 4.

Over the next several weeks, there will be much work with respect to finalizing the loan application and developing the FY16 and FY17 budgets along with FY18, FY19, and FY20 projections. Work will also continue with implementing improvements of the water system, and reviewing our associated rate structure. Evaluation and implementation of the recommendations for best use of

police and fire resources will continue, including corrective action for the police evidence room issues. Summer street maintenance and repair programs, as well as sidewalk repairs will soon be underway. Public meetings regarding the zoning ordinance are being held, with a recommended updated ordinance expected for consideration in late spring. A revision to the City's business licensing ordinance is expected soon. These are but a few of the many activities to be expected as the City makes the best use of its resources to provide the best level of service it can within the resources it has.

I look forward to working with you as we move towards transition to home rule under the guidance of a Receivership Transition Advisory Board. Please contact me if you have any questions.

EMERGENCY MANAGER
CITY OF FLINT
GENESEE COUNTY MICHIGAN

ORDER No. 3

CITY ADMINISTRATOR

BY THE POWER AND AUTHORITY VESTED IN THE EMERGENCY MANAGER ("EMERGENCY MANAGER") FOR THE CITY OF FLINT, MICHIGAN ("CITY") PURSUANT TO MICHIGAN'S PUBLIC ACT 436 OF 2012, LOCAL FINANCIAL STABILITY AND CHOICE ACT, ("PA 436"); GERALD AMBROSE, THE EMERGENCY MANAGER, ISSUES THE FOLLOWING ORDER:

Pursuant to PA 436, the Emergency Manager has broad powers in receivership to rectify the financial emergency and to assure the fiscal accountability of the City and its capacity to provide or cause to be provided necessary services essential to the public health, safety and welfare; and

Pursuant to PA 436, the Emergency Manager acts in place of local officials, specifically the Mayor and City Council, unless the Emergency Manager delegates specific authority; and

Pursuant to PA 436, the Emergency Manager has broad power to manage the local government, and may issue orders to elected and appointed officials necessary to accomplish the purpose of the Act. An Order issued under PA 436 is binding on the person to whom it is issued; and

IT IS HEREBY ORDERED:

The City Administrator shall serve as the City's Chief Administrative Officer at the pleasure of the Mayor, City Council and Emergency Manager or Receivership Advisory Transition Board (hereinafter "Board"), in accordance with the provisions of her contact with the City of Flint

dated February 23, 2015, and is charged with implementing executive and legislative directives and policies of the Mayor and City Council, subject to oversight of the Board, including strategic planning and budgeting, and with directing the management of day-to-day-administrative activities and appointed staff officials.

Consistent with the City Administrator Employment Agreement and Position Description, and subject to the approval and directives of the Board, the City Administrator shall have the following authority, duties and responsibilities notwithstanding any provision of the City Charter or Code of Ordinances:

1. Serve, advise and report to the Mayor with respect to the Mayor's executive functions, as set forth in Charter §4-101.

2. Serve and advise the Council with respect to the Council's legislative functions, as set forth in Charter §3-101.

3. Serve, advise and report to the Emergency Manager, as required by Public Act 436, so long as an Emergency Manager is in place.

4. Serve, advise and report to the Board, including:
    a. Advise and report to the Board as required by Public Act 436;
    b. Fully comply and assist the Board in meeting all duties assigned to it by the governor pursuant to MCL 141.1563(h);
    c. Provide all budgetary information requested by the Board;
    d. Serve as the primary contact between the Board and the City, including any department heads, officers, attorneys, accountants, employees, and any other contractors or consultants hired by the City to assist the City Administrator or the City in the discharge of powers, duties, functions, and responsibilities;
    e. Promptly and effectively communicate with the Board regarding any matter that may have a significant financial impact on the City.

5. Direct City department heads in carrying out the daily activities of the City, in the assembly of financial and management information; and in the gathering and assembly of pertinent data and information and recommendations for the Mayor and City Council's consideration in making executive determinations and policy.

6. Translate executive decisions and policies of the Mayor into administrative procedures for the cost effective and efficient operation of the City.

7. Implement legislative action of the City Council.

8. Monitor and manage the administrative inter-activity of the City departments so the delivery of public services represents an efficient, effective, and coordinated effort.

9. Interact with other governmental agencies as requested by the Mayor or City Council.

10. Prepare and review correspondence, reports, speeches, resolutions, and other material for public relations purposes. Answers citizen and official inquiries regarding City policy matters.

11. In consultation with the Mayor, direct the assembly of information and items for consideration by the Council, and provide them to the City Clerk for inclusion on the appropriate agendas.

12. Regularly consult with the Mayor in the development of actions with respect to the Mayor's executive functions, and with matters relating to the daily administrative functions of the City, including the evaluation of the performance of department heads, and the resolution of customer service issues.

13. Except to the extent prohibited by or in material conflict with applicable laws and authorities, the City Administrator or designee shall attend all meetings of the City Council, both public and closed, with the exception of those closed meetings devoted to the consideration of any action or lack of action on, or pursuant to, this Agreement, or any amendment thereto, or the City Administrator's evaluation. The City Administrator shall advise members, and make recommendations consistent with policy objectives, strategic planning and administrative activities.

14. Attend public meetings and events; give presentations and information to the public regarding matters of City business.

15. Manage and oversee all department heads, division heads, managers and non-elected City employees. This shall include an annual written performance evaluation of all department heads, including those identified in paragraphs 15, 16 and 17.

16. Recommend, subject to the Mayor's approval, the following appointments:

    a. Chief of Police;
    b. Fire Chief;
    c. Director of Finance;
    d. Planning & Development Director;
    e. Director of Department of Public Works;
    f. Chief Legal Officer;
    g. Chief Personnel Officer.

17. Recommend, subject to the Council's approval, the following appointments: City Clerk and City Auditor.

18. With the exception of those positions set forth in paragraphs 16 and 17, appoint all department heads, division heads and management positions, including the City Treasurer, Purchasing Director and the City Assessor, subject to any collective bargaining agreement(s) that may be applicable.

19. Ensure that all appointment processes, whether by the Mayor, Council or City Administrator, are open, competitive, and administered by the Human Resources Department or a qualified recruitment firm, with selection of the most qualified candidate to be based on defined education, experience, and professional standards appropriate to the position.

20. All appointments made pursuant to paragraphs 15, 16 and 17 shall serve at the pleasure of the City Administrator based on performance review.

21. Review current and potential litigation and labor disputes with the City Attorney and Mayor, and as needed the Board, and have complete decision making authority on behalf of the City, on all matters of litigation and labor disputes, including the ability to settle or initiate lawsuits and resolve labor disputes. The Mayor and City Council shall be consulted on such matters prior to implementation.

22. Negotiate all collective bargaining agreements on behalf of the City.

23. Work collaboratively with the City Council, the Mayor, other City or State officials and the Board to successfully transition to the termination of receivership for the City by supporting, implementing, and maintaining the financial and operating plans and the reforms instituted by the City's emergency managers, including but not limited to, the financial and operating plan for the city under Section II Act 436, and by providing appropriate training and explanation of City operations.

24. Serve as an official City representative before the Board, State departments and agencies, and the Michigan Legislature, with assistance from the Finance Director and the Mayor.

25. Be responsible for and vested with full authority necessary to effectively direct and supervise the day-to-day operations of the City by seeing that all laws and ordinances are faithfully executed, preparing the proposed annual budget as recommended by the Finance Director and any accounting firm retained by the City, and supervising the expenditures of all sums appropriated to and the attainment of all objectives established for departments of the executive branch of the City and working collaboratively with all officers and officials to effectively execute daily operations.

26. Ensure that a rolling six-year capital improvement plan is annually prepared in accordance with applicable law and the City's Code of Ordinances. Coordinate with the Mayor on the annual preparation of a rolling two-year budget

27. Review, approve and co-sign with the Mayor all contracts on behalf of and entered into by the City and modify or terminate any current contract with the City.

28. Approve all financial policies, City policies and procedures, job descriptions and personnel policies for the City, after consultation with the Mayor and City Council.

29. Designate check signers on all City bank accounts.

30. Refer City Council communications to the appropriate City employee or investigate such matter(s) and inform the City Council of the results of such efforts. Provided, however, when responding to City Council referrals, the City Administrator shall have discretion to utilize the personnel and resources the City Administrator deems reasonable and so as to avoid unnecessary interruption of services or incurrence of unnecessary costs.

31. Any investigation by the City Council, as contemplated by Charter §3-205 and §3-206, including the power to subpoena witnesses, shall be subject to the City Administrator's review and approval, so as to avoid unnecessary interruption of services or incurrence of unnecessary costs.

32. In the event the Mayor or Council fails to perform any duty or take any required action after having been afforded a reasonable opportunity to do so, the City Administrator may perform the duty or function of the Mayor or Council upon approval of the Board.

This Order may be amended, modified, repealed or terminated by any subsequent Order issued by the Emergency Manager.

EMERGENCY MANAGER
CITY OF FLINT
GENESEE COUNTY MICHIGAN

ORDER No. 4

MAYOR/COUNCIL COMPENSATION

BY THE POWER AND AUTHORITY VESTED IN THE EMERGENCY MANAGER ("EMERGENCY MANAGER) FOR THE CITY OF FLINT, MICHIGAN ("CITY") PURSUANT TO MICHIGAN'S PUBLIC ACT 436 OF 2012, LOCAL FINANCIAL STABILITY AND CHOICE ACT, ("PA 436"); GERALD AMBROSE, THE EMERGENCY MANAGER, ISSUES THE FOLLOWING ORDER:

Pursuant to Public Act 436, the Emergency Manager has broad powers in receivership to rectify the financial emergency and to assure the fiscal accountability of the City of Flint and its capacity to provide or cause to be provided necessary services essential to the public health, safety and welfare; and

Pursuant to Public Act 436, the Emergency Manager acts in place of local officials, specifically the Mayor and City Council, unless the Emergency Manager delegates specific authority; and

Pursuant to Public Act 436, the Emergency Manager has broad power to manage the local government, and may issue Orders to elected and appointed officials necessary to accomplish the purpose of the Act; and

Pursuant to Public Act 436, City Council meetings are scheduled and conducted at the discretion of the Emergency Manager; and

An Order issued under PA 436 is binding on the person to whom it is issued; and

Prior to the appointment of Emergency Manager Michael Brown on December 1, 2011, Mayor Dayne Walling's annual compensation rate was $91,801; and

Prior to the appointment of Emergency Manager Michael Brown on December 1, 2011, Flint City Council President had an annual compensation rate of $20,856. City Council Vice President had an annual compensation rate of $20,381; and, City Councilmembers had an annual compensation rate of $19,907; and

As the City of Flint moves toward transition from governance and management by an Emergency Manager to Home Rule with oversight by a Receivership Transition Advisory Board, the responsibilities of the Mayor and Council are being increased, with the City Council now meeting regularly twice per month and Committees once per month

Mayor Walling's duties and responsibilities have increased and will further increase as the City of Flint progresses to local control; and

Mayor Walling has completed Level One of Michigan Municipal League (MML) core courses for municipal government and receipt of the MML Education Award, as required by Emergency Manager Order 2 dated April 18, 2011, and has otherwise accomplished the assigned tasks; and

Based on his increased duties, responsibilities and performance, Mayor Walling's salary is established at an annual compensation rate of $91,801, effective April 13, 2015; and

City Council's duties and responsibilities have increased and will further increase as the City of Flint progresses to local control; and

Based on increased duties, the annual compensation for the Flint City Council President shall be $20,856; the City Council Vice President shall be $20,381; and all other Council members shall be $19,907, effective April 13, 2015; provided however, that council members must have completed the Level One of Michigan Municipal League (MML) core courses for municipal government and received the MML Education Award by November 1, 2015, and as certified by the City Council President, or their annual compensation shall be reduced to $10,500 until such time as they have done so.

The compensation set forth above shall continue until the Local Officers Compensation Commission convenes to establish the compensation for the Mayor and Council in accordance with MCL 117.5c and Flint City Code, Chapter 2, Article III.

This Order is effective April 13, 2015.

This Order may be amended, modified, repealed or terminated by any subsequent Order issued by the Emergency Manager.

Dated: 4/14/15 By:

Gerald Ambrose
Emergency Manager
City of Flint

xc: State of Michigan Department of Treasury
Mayor Dayne Walling
Flint City Council
Inez Brown, City Clerk

ORDINANCE NO. 3865

An Ordinance to amend the City of Flint Code of Ordinances by amending Chapter 18, Taxation; Funds; Purchasing; Article IV, Purchases.

IT IS HEREBY ORDAINED BY THE PEOPLE OF THE CITY OF FLINT:

Sec. 1. That the Ordinances of the City of Flint shall be amended by amending Chapter 18, Taxation; Funds; Purchasing; Article IV, Purchases; by updating Sections 18-19 through 18-21.13; the renumbering of Section 18-21.14 to Section 18-21.20; and, the addition of new Sections 18-21.15 through 18-21.19, which shall read in its entirety as follows:

ARTICLE IV: PURCHASING

§ 18-18 SHORT TITLE.

This ordinance shall be known and may be cited as the "Purchasing Ordinance of the City of Flint."

§ 18-19 DEFINITIONS.

For ~~the~~ purposes of this article, the following terms, phrases, words, and their derivations shall have the meaning given ~~herein~~. When not inconsistent with the context, words used in the present tense include the future, words in the plural number include the singular number, and words in the singular number include the plural number. The word "shall" is always mandatory and not merely directory.

AGENCY. Any department, office, multiple member body or other organization of City government and includes any elective officer, appointee or person acting or purporting to act in the exercise of official duties, but shall not include the Board of Hospital Managers.

CHIEF EXECUTIVE. The Mayor of the City of Flint.

CITY. The City of Flint, Michigan.

CITY COUNCIL. The Council of the City of Flint.

CONTRACTUAL SERVICES. All telephone, gas, water, electric light and power service; towel and cleaning service; insurance; leases for all grounds, buildings, office or other space required by the agencies, with the exception of property under the control of the Housing Commission, Department of Community Development or any independent multiple member board established in accordance with the provisions of the **FLINT CITY** Charter; and the rental, repair or maintenance of equipment, machinery and other City owned personal property. The term shall not include professional and other contractual services ~~which~~ **THAT** have been proven to be unique and not subject to competition.

DIRECTOR. **The ~~Director of Purchases and Supplies~~ PURCHASING DIRECTOR AND/OR PURCHASING MANAGER.**

PROCUREMENT CARD.

SUPPLIES. All supplies, materials and equipment.

§ 18-20 ~~DIRECTOR OF PURCHASES AND SUPPLIES~~ PURCHASING DIRECTOR.

There is hereby created the position of **PURCHASING** Director ~~of Purchases and Supplies~~ who shall be a member of the Classified Service and shall be appointed by the ~~Mayor~~ **CITY ADMINISTRATOR** with the approval of the City Council. The **PURCHASING** Director shall perform all duties as provided ~~herein~~ **BY THIS ORDINANCE AND THE FLINT CITY CHARTER** under the direction of the ~~Mayor~~ **CITY ADMINISTRATOR** and shall perform ~~such~~ **ALL** other duties as may be prescribed by the ~~Mayor~~ **CITY ADMINISTRATOR.**

§ 18-21 DIRECTOR TO HAVE SUPERVISION OF PURCHASE AND DISTRIBUTION OF SUPPLIES, MATERIALS AND EQUIPMENT.

The Director of Purchases and Supplies shall have general supervision of the purchase and distribution of all supplies, materials and equipment and shall perform all duties required by law and shall have the powers and duties prescribed by this article.

§ 18-21.1 ADDITIONAL DUTIES AND RESPONSIBILITIES OF DIRECTOR.

The Director shall have the power and it shall be his duty:

(a) *Purchase or contract.* To purchase or contract for all supplies and contractual services needed by any agency in accordance with purchasing procedures as prescribed by this article and such rules and regulations as the Director shall adopt for the internal management and operation of the office of Director of Purchases and Supplies and such other rules and regulations as shall be prescribed by the Mayor as the purchasing functions related to executive staff offices and departments.

(1) *Exceptions prohibited.* The authority of the Director to negotiate all purchases for all agencies shall not be abridged by excepting by rule any particular agency.

(2) *Unauthorized purchases.* Except as herein provided, it shall be unlawful for any agency to order the purchase of any supplies or make any contract within the purview of this article other than through the Director and any purchase ordered or contract made contrary to the provisions hereof shall not be approved and the City shall not be bound thereby.

(b) *Other powers and duties.* In addition to the purchasing authority conferred in subsection (a) above and in addition to any other powers and duties conferred by this article, the Director shall:

(1) *Minimum expenditure.* Act to procure for the City the highest quality in supplies and contractual services at least expense to the City.

(2) *Encourage competition.* Discourage uniform bidding and endeavor to obtain as full and open competition as possible on all purchases and sales;

(3) *Purchasing analysis.* Keep informed of current developments in the field of purchasing, prices, market conditions and new products, and secure for the City the benefits of research done in the field of purchasing by other governmental jurisdictions, national technical societies, trade associations having national recognition, and by private businesses and organizations.

(4) *Forms.* Prescribe and maintain such forms as he shall find necessary to the operation of this article.

(5) *Standard nomenclature.* Prepare and adopt a standard purchasing nomenclature for agencies and suppliers.

(6) *Vendor's catalog file.* Prepare, adopt and maintain a vendor's catalog file.

(7) *Bulk purchases.* Exploit the possibilities of buying "in bulk" so as to take full advantage of discounts.

(8) *Tax exemptions.* So as to procure for the City all tax exemptions to which it is entitled.

(9) *Cooperation with Department of Finance.* Cooperate with the Department of Finance so as to secure for

the City the maximum efficiency in budgeting and accounting to the extent required by the Director of Finance.

(10) *Disqualification of bidders.* Have the authority, with the approval of the Mayor to declare vendors who default on the quotations or contracts irresponsible bidders and to disqualify them from receiving any business from the City for a stated period of time. Any vendor who feels himself aggrieved by the decision may, within ten (10) days of notification of such determination, make objections thereto, in writing, to the City Clerk. Within fifteen (15) days of the receipt of said notification, the City Council shall, after public hearing, make a final determination as to the disqualification of the vendor, which determination shall be final.

§ 18-21.2 REQUISITION AND ESTIMATES.

(a) *Requisitions or estimates.* All agencies, either by or with the authorization of the head of the department under which the agency operates, shall file with the Director detailed requisitions or estimates of their requirements in supplies and contractual services in such manner, at such times, and for such future periods as may be required for budgeting and accounting purposes.

(b) *Unforeseen requirements.* An agency shall not be prevented from filing, in the same manner, with the Director at any time a requisition or estimate for any supplies and contractual services, the need for which was not foreseen when the detailed estimates were filed.

§ 18-21.3 ENCUMBRANCE OF FUNDS.

Except in cases of emergency, the Director shall not issue any order for delivery on a contract or open market purchase until the Chief Finance Officer shall have certified, after pre-audit, that there is to the credit of the agency concerned a sufficient unencumbered appropriation balance, in excess of all unpaid obligations, to defray the amount of such order.

(a) Vendor information shall be furnished on a monthly basis to City Council.

The Director shall furnish to the Council by the fifteenth day of each month a list of all vendors, with or without a contract, to whom money was owed as of the last day of the preceding month. In addition to the name of each vendor the list shall contain each vendor's address, and, as of the last day of the preceding month, the total amount of money owed to each vendor, and how much of the amount owed each vendor has been due for more than 30 days and more than 60 days.

A violation of this ordinance is considered a misdemeanor, punishable by a $500.00 fine, and/or 90 days in jail.

§ 18-21.4 COMPETITIVE BIDDING REQUIRED.

All purchases of supplies, contractual services, or sales of personal property which is unsuitable for continued use, except as specifically provided herein, shall be based wherever possible on competitive bids.

§ 18-21.5 FORMAL CONTRACT PROCEDURE.

All supplies and contractual services, except as otherwise provided herein, when the estimated cost thereof shall exceed $3,000.00 shall be purchased by written contract or purchase order from the lowest responsible bidder, after due notice inviting proposals; and no purchase in excess of $3,000.00 shall be made by the Director and/or Manager, except upon the approval of the City Council. In the event that purchases made without City Council approval from any one supplier exceed $3,000.00 in any fiscal year, City Council shall be informed of such in writing by the Director of Purchases and/or Purchasing Manager. All sales of personal property with an estimated value in excess of $3,000.00 shall be

sold by written contract or bill of sale to the highest responsible bidder, after due notice inviting proposals.

(a) *Notice inviting bids.*

(1) *Electronic media and/or newspaper.*

a. Notices inviting bids/proposals shall be published at least five (5) days preceding the last day set for the receipt of proposals on the City of Flint website, any electronic media service, or at least one newspaper of general circulation in the City, if funding is available.

b. *Scope of notice.* The electronic media and/or newspaper notice required herein shall include a general description of the articles to be purchased or sold, shall state where bid blanks and specifications may be secured, and the time and place for opening bids.

(2) *Bidder's list.* The Director and/or Manager shall also solicit sealed bids from all responsible prospective suppliers who have requested their names be added to a "bidders list," which the Director and/or Manager shall maintain by directing prospective suppliers to the available electronic media source or by sending them a copy of such newspaper notice or such other notice as will acquaint them with the proposed purchase or sale. In any case, invitations sent to the vendors on the bidders' list shall be limited to commodities that are similar in character and ordinarily handled by the trade group to which the invitations are sent.

(b) *Bid deposits.* When deemed necessary by the Director and/or Manager, bid deposits shall be prescribed in the public notice inviting bids. Unsuccessful bidders shall be entitled to return of bid deposits upon award of the contract. A successful bidder shall forfeit any bid deposit required by the Director and/or Manager upon failure on his part to enter a contract within ten (10) days after the award.

(c) *Bid opening procedure.*

(1) *Sealed.* All bids and proposals shall be submitted via either the electronic media source or in a sealed envelope to the Director and/or Manager and shall be identified as such electronic means or on the face of the envelope.

(2) *Opening.* Bids shall be opened in public at the time and place stated in the public notices and shall be witnessed by the City Clerk's designee.

(3) *Tabulation.* A tabulation of all bids received shall be available for public inspection.

(d) *Rejection of bids.*

(1) The Director and/or Manager shall have the authority to reject any bids, or any part thereof, when the public interest shall be served thereby; provided, however, that in such event the public interest shall be clearly stated in the notice of rejection.

(2) *Bidders in default to City.* The Director and/or Manager shall not knowingly accept a bid from a contractor who is in default on the payment of taxes, licenses or other monies due the City. Contracts with bidders who are found to have been in default at the time of award of the contract shall be voidable.

(e) *Award of contract.*

(1) *Authority of the Director and/or Manager.* The Director and/or Manager shall have the authority to award

contracts within the purview of this article, subject to the approval of the City Council.

(2) *Lowest responsible bidder.* Contracts shall be awarded to the lowest responsible bidder. In determining the "lowest responsible bidder," in addition to price, the Director and/or Manager shall consider the following factors, among others:

a. The ability, capacity and skill of the bidder to perform the contract or provide the services required;

b. Whether the bidder can perform the contract or provide the service promptly, or within the time specified, without delay or interference;

c. The character, integrity, reputation, judgment, experience and efficiency of the bidder in business;

d. The quality of performance of previous contracts or services

e. The previous and existing compliance by the bidder with laws and ordinances relating to the contract or services;

f. The sufficiency of the financial resources and ability of the bidder to perform the contract or provide the services;

g. The quality, availability and adaptability of the supplies, or contractual services, to the particular use required;

h. The ability of the bidder to provide future maintenance and service for the use of the subject of the contract;

i. The number and scope of conditions attached to the bid;

j. Compliance with the City's affirmative action program;

k. Other factors involved. A contract may be awarded to a bidder based on factors other than the lowest bid, including but not limited to the bidder's competence, reliability and/or skills; provided that the Director and/or Manager submits a report detailing such factors to City Council subject to its approval.

(f) *Award to other than the low bidder.* From the bidders so determined to be responsible, the Director and/or Manager shall award the contract to the lowest such bidder; provided, that in determining the lowest bid, the Director and/or Manager shall consider the bona fide business location of the bidder. If the lowest responsible bidder is not located within the City limits of Flint, and the lowest bid of the responsible bidders located within the City limits of Flint does not exceed that of the lowest nonlocal bidder by more than seven percent (7%), then the Director and/or Manager may determine said lowest local bidder to be the lowest responsible bidder, and make the award to such local bidder accordingly, subject to the approval of the City Council. Additionally, if the lowest responsible bidder is not located within the limits of the City of Flint, and the lowest bid of the responsible bidder located within the County of Genesee does not exceed the bid of the lowest nonlocal bidder by more than three and one half percent (3.5%), then the Director and/or Manager may determine said lowest Genesee County bidder to be the lowest responsible bidder, and make the award to such Genesee County bidder accordingly, subject to the approval of the City Council.

(g) *Irresponsible bidder; statement required.* When bidders are determined not to be responsible bidders and their bids would have been lower than the bid actually awarded, a full and complete statement of the reason for such determination shall be prepared by the Director and/or Manager and filed with the other papers relating to the transactions.

(h) *Performance bonds.* The Director and/or Manager shall, in his discretion, have the authority to require either a performance bond, cash deposit or surety, before entering a contract, in such amount as he shall find reasonably necessary to protect the best interests of the City.

(i) *Unique services.* Professional or personnel contractual services which have been proven to be unique and not subject to the requirements of the competitive bidding process in excess of $2,000.00 cumulative for a fiscal year shall require City Council approval unless otherwise provided by the Charter or other law.

(j) *Prohibition against subdivision.* No contract or purchase order shall be subdivided to void the requirements of this section.

(k) *Termination of contract.* No contract or purchase which was made or awarded with the approval of the City Council may be terminated by the Director and/or Manager or any other member of the Executive Branch without first obtaining the approval of City Council for such termination.

§ 18-21.6 OPEN MARKET PROCEDURE.

All purchases of supplies, contractual services, or sales of personal property which is unsuitable for continued use, which has an estimated value of less than three thousand five hundred dollars ($3,500.00), may be made in the open market, without proper advertisement and without observing the procedure prescribed in § 18-21.5 for the award of formal contracts.

(a) *Minimum number of bids.* All open market purchases shall, whenever feasible, be based on at least three (3) competitive bids, and shall be awarded to the lowest responsible bidder in accordance with the standards set forth in § 18-21.5(e)(2).

(b) *Notice inviting bids.* The Director shall solicit bids by:

(1) Direct mail request to prospective vendors; or

(2) By telephone; or

(3) By public notice posted on the bulletin boards of the City Hall.

(c) *Recording.* The Director shall keep a record of all open market orders and the bids submitted in competition thereon, and such records shall also be open to public inspection.

§ 18-21.7 PETTY EXPENDITURES REVOLVING FUND.

Petty cash funds may be established within any agency with the approval of the Director of Finance. From this fund shall be paid all purchases not in excess of $100.00 each, made by the heads of agencies for incidentals, with the approval of the Director. The Director shall promulgate rules and regulations for use of the petty expenditures revolving fund.

§ 18-21.8 CENTRAL WAREHOUSING; STOREROOM'S REVOLVING FUND.

(a) *Administration.* The Director shall control and supervise storerooms and warehouses and shall administer the storeroom's revolving fund.

(b) *Storeroom's revolving fund.* There is hereby created a storeroom's revolving fund.

(1) *Accounting procedure.* Requisitions from supplies, in a storeroom or warehouse shall be credited by the Director to the storeroom's

revolving fund by a charge against the appropriation of the using agency.

(2) *Inventory.* The Director shall maintain a perpetual inventory record of all materials, supplies or equipment stored in storerooms and warehouses.

§ 18-21.9 PRICE AGREEMENT CONTRACT PROCEDURE.

The head of the agency shall have the authority to submit requisitions to the Director for supplies available under the terms of a price agreement.

§ 18-21.10 EMERGENCY PURCHASES.

(a) *Emergency defined.* For the purpose of this section only, an *EMERGENCY* constitutes a situation that threatens the public health, safety or welfare, and:

(1) Is unforeseeable;

(2) Calls for immediate action; and

(3) Cannot be responded to using established procurement methods.

(b) *By Director and/or Manager.* In case of an emergency that requires the immediate purchase of supplies or contractual services, the Director and/or Manager shall be empowered to secure by open market procedure and at the lowest obtainable price, any supplies or contractual service:

(1) Without City Council approval for amounts not exceeding $10,000.00 per vendor during a six (6) month period;

(2) With City Council approval for amounts exceeding $10,000.00 per vendor during a six (6) month period.

(3) Recorded explanation. The Director and/or Manager shall immediately file a report explaining the circumstances of an emergency purchase with the City Clerk to be entered into the minutes of the City Council and remain open to public inspection.

(c) *By head of department.* In case of an emergency which may result in the loss of:

(1) *Life.* The head of any agency may purchase directly any supplies or services necessary under the circumstances then in existence; or

(2) *Property.* The head of any agency may purchase directly only those supplies or services not to exceed $10,000.00 during a six (6) month period without the prior approval of City Council.

(d) *Violation.* Any person in violation of making an unauthorized expenditure as outlined in this section shall be guilty of a misdemeanor punishable by a $500.00 fine and/or ninety (90) days in jail upon conviction of the Court.

§ 18-21.11 INSPECTION AND TESTING.

The Director may inspect, or supervise the inspection of all deliveries of supplies or contractual services to determine their conformance with the specifications set forth in the order or contract.

(a) *Inspection by agency.* The Director shall have the authority to authorize agencies having the staff and facilities for adequate inspection to inspect all deliveries made to such agencies under rules and regulations which the Director shall prescribe.

(b) *Tests.* The Director shall have the authority to require chemical and physical tests of samples of deliveries which are necessary to determine their quality and conformance with the specifications. In the performance of such tests, the Director shall have the authority to make use

~~of laboratory facilities of any agency of the City government or of any outside laboratory.~~

~~§ 18-21.12 SURPLUS SUPPLIES.~~

~~All using agencies shall submit to the Director, at such times and in such form as he shall prescribe, an inventory of all supplies which are no longer used or which have become obsolete.~~

~~(a) *Transfer.* The Director shall have the authority to transfer surplus supplies to other agencies.~~

~~(b) *Sale.* The Director shall have the authority to sell all supplies which have become unsuitable for public use, or to exchange the same for, or trade in the same on, new supplies.~~

~~(1) *Competitive bidding.* Sales under this section shall be made to the highest responsible bidder and in conformance with §§ 18-21.5 or 18-21.6 hereof whichever is applicable.~~

~~§ 18-21.13 COOPERATIVE PURCHASING.~~

~~The Director shall have the authority to join with other units of government in cooperative purchasing plans when the best interests of the City would be served thereby.~~

§ 18-21 PURPOSE AND SCOPE.

THE VISION FOR THE CITY IS A WELL-MANAGED, FINANCIALLY STABLE, AND ACCOUNTABLE GOVERNMENT FOCUSED ON CREATING AND MAINTAINING A VIBRANT AND GROWING COMMUNITY THAT WILL ATTRACT AND RETAIN RESIDENTS, BUSINESSES, STUDENTS AND VISITORS AND IMPROVE QUALITY OF LIFE. THE CITY'S MISSION IS TO ASSURE THAT RESIDENTS, BUSINESSES, STUDENTS AND VISITORS RECEIVE MUNICIPAL SERVICES IN A CUSTOMER FRIENDLY AND FINANCIALLY RESPONSIBLE MANNER.

STRUCTURING CITY OPERATIONS TO ACHIEVE THIS MISSION AND VISION HAVE REQUIRED THE ESTABLISHMENT OF LONG RANGE STRATEGIC PLANNING AND BUDGETING. EQUALLY IMPORTANT IS ESTABLISHING THE PRINCIPLES BY WHICH GOODS AND SERVICES WILL BE OBTAINED.

THE PROCESS OF OBTAINING GOODS AND SERVICES MUST BE CONSISTENT WITH THE STRATEGIC PLAN. THERE MUST BE PROPER OVERSIGHT AND TRANSPARENCY, WITH A GOAL OF OBTAINING THE GOODS AND SERVICES THAT BEST MEET THE NEEDS OF CITY DEPARTMENTS. THE PROCESS MUST ENSURE COMPETITIVE PROCUREMENT CONDUCTED IN AN ETHICAL AND TIMELY MANNER IN ORDER FOR THE CITY TO CARRY OUT ITS DUTIES. USE OF CITY RESOURCES FOR PERSONAL USE IS GROUNDS FOR TERMINATION OF EMPLOYMENT AND POSSIBLE CRIMINAL PROSECUTION.

PURCHASING GOODS AND SERVICES SUPPORTS THE BUSINESSES AND COMMUNITIES IN WHICH THE BUSINESSES RESIDE. ACCORDINGLY, WHEN FEASIBLE, IN TERMS OF QUALITY, COST, AND ACCESSIBILITY, THE CITY SHOULD MAKE GOOD FAITH EFFORTS TO PROCURE GOODS AND SERVICES FROM BUSINESSES WITH A PHYSICAL LOCATION WITHIN THE CITY LIMITS, AND IF NOT ABLE TO DO SO, TO MAKE SIMILAR EFFORTS WITH RESPECT TO BUSINESSES PHYSICALLY LOCATED IN GENESEE COUNTY AND/OR SURROUNDING COMMUNITIES.

§ 18-21.1 ASSIGNMENT OF RESPONSIBILITY.

THE FLINT CITY COUNCIL SHALL BE RESPONSIBLE FOR PERIODICALLY REVIEWING AND UPDATING THIS ORDINANCE, FOR MONITORING PURCHASING ACTIVITIES AS DESCRIBED WITHIN THIS ORDINANCE, AND APPROVING PURCHASES AS DESCRIBED WITHIN THIS ORDINANCE TO ASSURE THAT GOODS AND SERVICES OBTAINED BEST MEET THE NEEDS OF CITY DEPARTMENTS AND ARE OBTAINED IN A COMPETITIVE, TRANSPARENT, ETHICAL AND TIMELY MANNER THAT PERMITS THE CITY TO CARRY OUT ITS DUTIES.

THE MAYOR SHALL BE RESPONSIBLE FOR EXECUTIVE OVERSIGHT OF THE PURCHASING OF ALL GOODS AND SERVICES FOR THE CITY, FOR APPROVING PURCHASES AS PROVIDED IN THIS ORDINANCE, AND FOR ASSURING THAT CITY COUNCIL IS PROVIDED TIMELY INFORMATION TO ENABLE IT TO CARRY OUT ITS OVERSIGHT RESPONSIBILITIES.

THE CITY ADMINISTRATOR SHALL PROVIDE ADMINISTRATIVE OVERSIGHT OF THE PURCHASING FUNCTION, FOR APPROVING PURCHASES AS PROVIDED IN THIS ORDINANCE, AND FOR PROVIDING THE CITY COUNCIL TIMELY INFORMATION TO ENABLE IT TO CARRY OUT ITS OVERSIGHT RESPONSIBILITIES.

THE FINANCE DIRECTOR SHALL SUPERVISE THE ACTIVITIES OF THE PURCHASING DIRECTOR, AND SHALL WORK WITH THE PURCHASING DIRECTOR, DEPARTMENT HEADS AND OTHERS TO ASSURE THAT PROPER BUDGETARY AUTHORITY EXISTS FOR THE PURCHASE OF GOODS AND SERVICES.

THE PURCHASING DIRECTOR SHALL BE RESPONSIBLE FOR THE PROCUREMENT OF ALL GOODS AND SERVICES FOR THE CITY UNLESS OTHERWISE PROVIDED IN THIS ORDINANCE. THE PURCHASING DIRECTOR SHALL ASSURE THAT ALL GOODS AND SERVICES ARE OBTAINED IN A COMPETITIVE AND ETHICAL MANNER AND IN COMPLIANCE WITH THE PROCESSES ESTABLISHED IN THIS ORDINANCE. THE PURCHASING DIRECTOR SHALL ALSO APPROVE PURCHASES AS PROVIDED IN THIS ORDINANCE. THE PURCHASING DIRECTOR SHALL ALSO DEVELOP AND RECOMMEND TO THE MAYOR THE APPROPRIATE PROCESSES AND PROCEDURES TO MEET THE REQUIREMENTS OF THIS ARTICLE.

DEPARTMENT HEADS AND PERSONNEL DESIGNATED BY DEPARTMENT HEADS SHALL HAVE THE AUTHORITY TO OBTAIN GOODS AND SERVICES AS AUTHORIZED IN THIS ARTICLE. THE DESIGNATED PERSONNEL SHALL ALSO PROVIDE THE PURCHASING DIRECTOR WITH THE INFORMATION NEEDED TO ASSURE THAT THE GOODS AND SERVICES TO BE OBTAINED ARE IN THE BEST INTERESTS OF THE CITY.

ALL PERSONS WHO ARE AUTHORIZED TO PURCHASE GOODS AND SERVICES FOR THE CITY SHALL BE RESPONSIBLE FOR ASSURING THAT PURCHASES MADE IN THE BEST INTERESTS OF THE CITY, ARE OBTAINED ON A COMPETITIVE BASIS AS REQUIRED BY THIS ARTICLE, AND ARE DONE IN AN ETHICAL MANNER.

§ 18-21.2 DELEGATION OF AUTHORITY.

THERE MUST BE PROPER OVERSIGHT AND TRANSPARENCY WITH RESPECT TO THE PURCHASE OF

GOODS AND SERVICES, WITH A GOAL OF OBTAINING GOODS AND SERVICES THAT BEST MEET THE NEEDS OF CITY DEPARTMENTS. THE PROCESS MUST ENSURE COMPETITIVE PROCUREMENT CONDUCTED IN A TIMELY AND ETHICAL MANNER IN ORDER FOR THE CITY TO CARRY OUT ITS DUTIES. ALL PARTIES DELEGATED AUTHORITY WITH RESPECT TO ALL PURCHASES OF GOODS AND SERVICES ARE CHARGED WITH THE RESPONSIBILITY OF MAKING PURCHASES IN A COMPETITIVE AND ETHICAL MATTER, AND FOR ADHERING IN ALL RESPECTS TO THE CITY OF FLINT CODE OF CONDUCT POLICY.

THE AUTHORITY WITH RESPECT TO THE PURCHASE OF ALL GOODS AND SERVICES IS DELEGATED AS PROVIDED HEREIN:

DEPARTMENT HEADS AND EMPLOYEES SPECIFICALLY DESIGNATED BY DEPARTMENT HEADS, AND APPROVED BY THE PURCHASING DIRECTOR, SHALL BE ELIGIBLE TO BE ISSUED PROCUREMENT CARDS, AND ARE AUTHORIZED TO PURCHASE GOODS AND SERVICES FOR CITY PURPOSES, PROVIDED FUNDS ARE APPROPRIATELY BUDGETED AND THAT THE DEPARTMENT HEAD OR DESIGNATED EMPLOYEE FORMALLY AGREE TO ALL PROVISIONS REGARDING THE USE AND RECONCILEMENT OF THE CARDS, AS PRESCRIBED BY THE PURCHASING DIRECTOR. THE AMOUNT OF GOODS AND SERVICES PURCHASED IN ONE MONTH MAY NOT EXCEED $10,000, UNLESS SPECIFIC AUTHORIZATION IS APPROVED BY THE FINANCE DIRECTOR, CITY ADMINISTRATOR, AND MAYOR UPON THE RECOMMENDATION OF THE PURCHASING DIRECTOR. THE PURCHASING DIRECTOR MAY SUSPEND USE OF PROCUREMENT CARDS FOR FAILURE TO FOLLOW ESTABLISHED PROCESSES AND PROTOCOLS. USE OF PROCUREMENT CARDS FOR PERSONAL OR OTHER NON-CITY USE IS A VIOLATION OF THE CITY'S CODE OF CONDUCT POLICY AND MAY BE GROUNDS FOR TERMINATION AND POSSIBLE CRIMINAL PROSECUTION.

DEPARTMENT HEADS AND EMPLOYEES AUTHORIZED BY DEPARTMENT HEADS MAY REQUEST THE PURCHASE OF GOODS AND SERVICES BY FILING A PROPERLY COMPLETED REQUISITION WITH THE PURCHASING DIRECTOR. UPON RECEIPT OF THE REQUISITION, AND DOCUMENTATION THAT FUNDS HAVE BEEN PROPERLY BUDGETED, THE PURCHASING DIRECTOR SHALL CAUSE THE SOLICITATION OF REQUESTS FOR THE PURCHASE OF THE GOODS AND SERVICES TO BE MADE, FOLLOWING THE APPROPRIATE PROCESSES.

THE PURCHASING DIRECTOR SHALL ADHERE TO THE FORMAT OF THE SELECTED PROCESS AS DETAILED IN THE FOLLOWING SECTIONS:

§ 18-21.3 COMPETITIVE SEALED BIDDING.

(1) *CONDITIONS FOR USE.* ALL PROCUREMENT REQUESTS FOR THE CITY SHALL BE AWARDED BY THE USE OF COMPETITIVE SEALED BIDDING EXCEPT AS OTHERWISE PROVIDED IN SECTIONS 18-21.4 (COMPETITIVE SEALED PROPOSALS), 18-21.5 (QUALIFICATIONS BASED SELECTION), 18-21.6 (SMALL PURCHASES), 18-21.7 (PUBLIC ENTITY PROCUREMENTS), 18-21.8 (SOLE SOURCE PROCUREMENT), AND 18-21.9 (EMERGENCY PROCUREMENTS), OF THIS ARTICLE.

(2) *INVITATION FOR BIDS.* AN INVITATION FOR BIDS SHALL BE ISSUED AND SHALL INCLUDE SPECIFICATIONS AND ALL CONTRACTUAL TERMS AND CONDITIONS APPLICABLE TO THE PROCUREMENT.

(3) *PUBLIC NOTICE.* ADEQUATE PUBLIC NOTICE OF THE INVITATION FOR BIDS SHALL BE GIVEN NOT LESS THAN TEN (10) CALENDAR DAYS PRIOR TO THE DATE SET FORTH FOR THE OPENING OF BIDS. THE NOTICE MAY INCLUDE PUBLICATION ON THE CITY'S WEBSITE, ANY ELECTRONIC MEDIA SERVICE, OR NEWSPAPER OF GENERAL CIRCULATION WITHIN TEN (10) DAYS PRIOR TO BID OPENING. THE PUBLIC NOTICE SHALL STATE THE PLACE, DATE, AND TIME OF BID OPENING.

(4) *BID OPENING.* BIDS MAY BE OPENED PUBLICLY IN THE PRESENCE OF ONE OR MORE WITNESSES AT THE TIME AND PLACE DESIGNATED OR RECORDED AND PUBLISHED IN AN ELECTRONIC INVITATION FOR BIDS MANAGEMENT SYSTEM. THE AMOUNT OF EACH BID, AND ALL OTHER RELEVANT INFORMATION, AS THE PURCHASING DIRECTOR DEEMS APPROPRIATE, TOGETHER WITH THE NAME OF EACH BIDDER SHALL BE RECORDED. THE RECORD AND EACH BID SHALL BE OPEN TO THE PUBLIC.

(5) *BID ACCEPTANCE AND BID EVALUATION.* BIDS SHALL BE UNCONDITIONALLY ACCEPTED WITHOUT ALTERATION OR CORRECTION, EXCEPT AS AUTHORIZED HEREIN. BIDS SHALL BE EVALUATED BASED ON THE REQUIREMENTS SET FORTH IN THE INVITATION FOR BIDS, WHICH MAY INCLUDE CRITERIA TO DETERMINE ACCEPTABILITY SUCH AS INSPECTION, TESTING, QUALITY, WORKMANSHIP, DELIVERY, AND SUITABILITY FOR A PARTICULAR PURPOSE. THOSE CRITERIA THAT WILL AFFECT THE BID PRICE AND BE CONSIDERED IN THE EVALUATION FOR AWARD SHALL BE OBJECTIVELY MEASURABLE, SUCH AS DISCOUNTS, TRANSPORTATION COSTS, AND TOTAL OR LIFE CYCLE COSTS. THE INVITATION FOR BIDS SHALL SET FORTH THE EVALUATION CRITERIA TO BE USED.

(6) *CORRECTION OR WITHDRAWAL OF BIDS; CANCELLATION OF AWARDS.* CORRECTIONS OR WITHDRAWAL OF INADVERTENTLY ERRONEOUS BIDS BEFORE OR AFTER BID OPENING, OR CANCELLATION OF AWARDS OR CONTRACTS BASED ON BID MISTAKES, MAY BE PERMITTED WHERE APPROPRIATE. MISTAKES DISCOVERED BEFORE BID OPENING MAY BE MODIFIED OR WITHDRAWN BY WRITTEN OR ELECTRONIC NOTICE RECEIVED IN THE OFFICE DESIGNATED IN THE INVITATION FOR BIDS PRIOR TO THE DEADLINE FOR SUBMISSION OF THE BID.

(7) *LOCAL PREFERENCE.* FROM THE BIDDERS DETERMINED TO BE RESPONSIBLE, THE PURCHASING DIRECTOR, IN CONSULTATION WITH THE DEPARTMENT HEAD REQUESTING THE GOODS OR SERVICES, SHALL DETERMINE THE RECOMMENDED BID AWARD. FROM AMONG THE RESPONSIBLE BIDDERS, THE RECOMMENDED AWARD SHALL BE TO THE LOWEST BIDDER; PROVIDED, THAT IN DETERMINING THE LOWEST BID, THE PURCHASING DIRECTOR SHALL CONSIDER THE BONA FIDE BUSINESS LOCATION OF THE BIDDER. IF THE LOWEST RESPONSIBLE BIDDER IS NOT LOCATED WITHIN THE CITY LIMITS, AND THE LOWEST BID OF THE RESPONSIBLE BIDDERS LOCATED

WITHIN THE CITY LIMITS DOES NOT EXCEED THAT OF THE LOWEST NON-LOCAL BIDDER BY MORE THAN SEVEN PERCENT (7%), THEN THE PURCHASING DIRECTOR SHALL BE ALLOWED TO REQUEST THE LOWEST LOCAL VENDOR MATCH THE PRICE OFFERED BY THE LOWEST NON-LOCAL VENDOR. ADDITIONALLY, IF THE LOWEST RESPONSIBLE BIDDER IS NOT LOCATED WITHIN THE CITY LIMITS, AND THE LOWEST BID OF THE RESPONSIBLE BIDDER LOCATED WITHIN GENESEE COUNTY DOES NOT EXCEED THE BID OF THE LOWEST NON-LOCAL BIDDER BY MORE THAN THREE AND ONE-HALF PERCENT (3.5%), THEN THE PURCHASING DIRECTOR SHALL BE ALLOWED TO REQUEST THE LOWEST LOCAL VENDOR MATCH THE PRICE OFFERED BY THE LOWEST NON-LOCAL VENDOR.

(8) *APPROVAL THRESHOLDS.* THE PURCHASING DIRECTOR, IN CONSULTATION WITH THE DEPARTMENT HEAD SHALL JOINTLY RECOMMEND THE AWARD OF A BID UNDER THIS SECTION. IF THE BID AWARD IS LESS THAN $20,000, THE DECISION OF THE PURCHASING DIRECTOR SHALL BE FINAL. IF THE RECOMMENDED BID AWARD IS IN EXCESS OF $20,000, IT SHALL ALSO BE APPROVED BY THE FINANCE DIRECTOR; IF IN EXCESS OF $30,000, IT SHALL ALSO BE APPROVED BY THE CITY ADMINISTRATOR; AND, IF IN EXCESS OF $50,000, IT SHALL ALSO BE APPROVED BY THE MAYOR. ANY RECOMMENDED BID AWARDS IN EXCESS OF $75,000 SHALL ALSO BE APPROVED BY THE CITY COUNCIL.

(9) *ADJUSTMENTS TO NEGOTIATED AWARDS.* IN THE EVENT THE SUCCESSFUL BIDDER WAS FOR A PROJECT THAT EXCEEDS AVAILABLE FUNDS AS CERTIFIED BY THE FINANCE DIRECTOR, THE PURCHASING DIRECTOR IS AUTHORIZED, WHEN TIME OR ECONOMIC CONSIDERATIONS PRECLUDE RE-SOLICITATION OF WORK OF A REDUCED SCOPE, TO NEGOTIATE AN ADJUSTMENT OF THE BID PRICE WITH THE LOWEST RESPONSIBLE BIDDER, IN ORDER TO BRING THE BID WITHIN THE AMOUNT OF AVAILABLE FUNDS. ANY NEGOTIATED ADJUSTMENT SHALL BE BASED ONLY UPON ELIMINATING INDEPENDENT DEDUCTIVE ITEMS SPECIFIED IN THE INVITATION FOR BIDS.

(10) *MULTI-STEP SEALED BIDDING.* WHEN IT IS CONSIDERED IMPRACTICAL TO INITIALLY PREPARE A PURCHASE DESCRIPTION TO SUPPORT AN AWARD BASED ON PRICE, AN INVITATION FOR QUALIFICATIONS MAY BE ISSUED REQUESTING THE SUBMISSION OF UN-PRICED OFFERS TO BE FOLLOWED BY AN INVITATION FOR BIDS LIMITED TO THOSE BIDDERS WHOSE OFFERS HAVE BEEN DETERMINED TO BE TECHNICALLY ACCEPTABLE UNDER THE CRITERIA SET FORTH IN THE FIRST SOLICITATION.

§ 18-21.4 COMPETITIVE SEALED PROPOSALS.

(1) *CONDITIONS FOR USE.* WHEN THE PURCHASING DIRECTOR DETERMINES THAT THE USE OF COMPETITIVE SEALED BIDDING IS EITHER NOT PRACTICABLE OR NOT ADVANTAGEOUS TO THE CITY, A CONTRACT FOR THE PURCHASE OF GOODS OR SERVICES MAY BE ENTERED INTO BY USE OF THE COMPETITIVE SEALED PROPOSALS METHOD.

(2) *REQUEST FOR PROPOSALS.* PROPOSALS SHALL BE SOLICITED THROUGH A WRITTEN AND

PUBLICALLY NOTICED REQUEST FOR PROPOSALS FORMAT.

(3) *PUBLIC NOTICE.* ADEQUATE PUBLIC NOTICE OF THE REQUEST FOR PROPOSALS SHALL BE GIVEN IN THE SAME MANNER AS PROVIDED IN SECTION 18-21.3(3) (COMPETITIVE SEALED BIDDING, PUBLIC NOTICE). THE PURCHASING DIRECTOR WILL DETERMINE THE AMOUNT OF TIME IN WHICH REQUESTS WILL BE SOLICITED.

(4) *RECEIPT OF PROPOSALS.* PROPOSALS SHALL BE PREPARED CONTAINING THE NAME OF EACH RESPONDENT, THE NUMBER OF MODIFICATIONS RECEIVED, IF ANY, AND A DESCRIPTION SUFFICIENT TO IDENTIFY THE ITEM OFFERED. THE PROPOSALS SHALL BE OPEN FOR PUBLIC INSPECTION ONLY AFTER BEING PUBLISHED.

(5) *DISCLOSURE OF RESPONDENTS, CONTENTS.* THE CONTENTS OF ANY PROPOSAL SHALL NOT BE DISCLOSED TO COMPETING RESPONDENTS UNTIL AFTER BEING PUBLISHED.

(6) *EVALUATION FACTORS.* THE REQUEST FOR PROPOSALS SHALL STATE THE RELATIVE IMPORTANCE OF PRICE AND OTHER EVALUATION FACTORS.

(7) *DISCUSSION WITH RESPONSIBLE RESPONDENTS AND REVISIONS TO PROPOSALS.* AS PROVIDED IN THE REQUEST FOR PROPOSALS, DISCUSSIONS MAY BE CONDUCTED WITH RESPONSIBLE RESPONDENTS WHO SUBMIT PROPOSALS DETERMINED TO BE REASONABLY SUSCEPTIBLE OF BEING SELECTED FOR AWARD FOR THE PURPOSE OF CLARIFICATION TO ASSURE FULL UNDERSTANDING OF, AND CONFORMANCE TO, THE SOLICITATION REQUIREMENTS. RESPONDENTS WHO SUBMITTED PROPOSALS DETERMINED TO BE REASONABLY SUSCEPTIBLE OF BEING SELECTED FOR AWARD SHALL BE ACCORDED FAIR AND EQUAL TREATMENT WITH RESPECT TO ANY OPPORTUNITY FOR DISCUSSION AND REVISION OF PROPOSALS, AND REVISIONS MAY BE PERMITTED AFTER SUBMISSIONS AND PRIOR TO AWARD FOR THE PURPOSE OF OBTAINING BEST AND FINAL OFFERS.

(8) *LOCAL PREFERENCE.* UNLESS THE FUNDING SOURCE FOR THE CONTRACT PROHIBITS SUCH PREFERENCES, THE PREFERENCE FOR LOCAL VENDORS AS OUTLINED IN SECTION 18-21.3(7) SHALL BE CONSIDERED.

(9) *APPROVAL THRESHOLDS.* THE PURCHASING DIRECTOR, IN CONSULTATION WITH THE DEPARTMENT HEAD, SHALL EVALUATE THE PROPOSALS AND RECOMMEND AWARD OF THE CONTRACT UNDER THIS SECTION. IF THE RECOMMENDED AWARD IS FOR LESS THAN $20,000, THE DECISION OF THE PURCHASING DIRECTOR SHALL BE FINAL. IF THE RECOMMENDED AWARD IS IN EXCESS OF $20,000, IT SHALL ALSO BE APPROVED BY THE FINANCE DIRECTOR; IF IN EXCESS OF $30,000, IT SHALL ALSO BE APPROVED BY THE CITY ADMINISTRATOR; AND, IF IN EXCESS OF $50,000, IT SHALL ALSO BE APPROVED BY THE MAYOR. ANY RECOMMENDED AWARD IN EXCESS OF $75,000 SHALL ALSO BE APPROVED BY THE CITY COUNCIL.

§ 18-21.5 QUALIFICATIONS BASED SELECTION.

(1) *CONDITIONS FOR USE.* THE PURCHASING DIRECTOR MAY DETERMINE, WHEN REQUISITIONS HAVE BEEN RECEIVED, THAT PRE-QUALIFYING VENDORS FOR CONSIDERATION IS IN THE BEST INTERESTS OF THE CITY.

(2) IN SUCH CASE, THE PURCHASING DIRECTOR, IN CONSULTATION WITH THE DEPARTMENT HEAD, SHALL DEVELOP A REQUEST FOR QUALIFICATIONS THAT WILL DEFINE THE REQUEST TO BE SOUGHT AND THE NECESSARY QUALIFICATIONS A QUALIFIED RESPONDING ENTITY MUST HAVE IN ORDER TO BE QUALIFIED TO RESPOND TO A PROPOSAL REQUEST.

(3) *PUBLIC NOTICE.* ADEQUATE PUBLIC NOTICE OF THE REQUEST FOR QUALIFICATIONS SHALL BE GIVEN IN THE SAME MANNER AS PROVIDED IN SECTION 18-21.3(3) (COMPETITIVE SEALED BIDDING, PUBLIC NOTICE).

(4) *RECEIPT OF QUALIFICATIONS.* A REGISTER OF QUALIFICATIONS SHALL BE PREPARED CONTAINING THE NAME AND QUALIFICATIONS OF EACH RESPONDENT. THE REGISTER OF QUALIFICATIONS SHALL BE OPEN FOR PUBLIC INSPECTION ONLY AFTER READ PUBLICLY.

(5) *EVALUATION OF SUBMISSIONS.* THE PURCHASING DIRECTOR, IN CONSULTATION WITH THE DEPARTMENT HEAD, SHALL EVALUATE THE QUALIFICATIONS OF THE RESPONDENT AND SHALL PREPARE A LIST OF RESPONDENTS DESIGNATED AS QUALIFIED. THE PURCHASING DIRECTOR SHALL ALSO PREPARE AND MAINTAIN A LIST OF RESPONDENTS NOT DESIGNATED AS PRE-QUALIFIED, IDENTIFYING THE REASONS WHY THEY WERE NOT DESIGNATED AS PRE-QUALIFIED.

(6) THE PURCHASING DIRECTOR WILL CAUSE TO BE PREPARED A REQUEST FOR COMPETITIVE SEALED PROPOSALS AS PROVIDED IN SECTION 18-21.1, AND ISSUED TO THE QUALIFIED RESPONDENTS.

§ 18-21.6 SMALL PURCHASES.

AS PROVIDED IN THIS ARTICLE, DEPARTMENT HEADS AND SPECIFICALLY DESIGNATED EMPLOYEES MAY BE ISSUED PROCUREMENT CARDS AND MAY PURCHASE GOODS AND SERVICES NOT EXCEEDING $10,000 PER MONTH. THE PURCHASES SHALL NOT BE ARTIFICIALLY DIVIDED SO AS TO CONSTITUTE A SMALL PURCHASE UNDER THIS SECTION.

FOR PURCHASES UNDER $10,000 PER MONTH, INCLUDING PURCHASES UTILIZING PROCUREMENT CARDS, THE DEPARTMENT HEAD AND AUTHORIZED EMPLOYEE SHALL, TO THE EXTENT POSSIBLE AND PRACTICAL AND IN THE BEST INTERESTS OF THE CITY, SOLICIT COMPETITIVE QUOTATIONS TO PROVIDE THE GOODS OR SERVICES SOUGHT. WHEN POSSIBLE AND PRACTICAL, A MINIMUM OF THREE (3) WRITTEN QUOTATIONS AND COPIES OF ALL QUOTATIONS SHALL BE PROVIDED TO THE PURCHASING DIRECTOR FOR SMALL PURCHASE REQUESTS. IN THE ABSENCE OF SUFFICIENT WRITTEN QUOTATIONS, THE PURCHASING DIRECTOR MAY ELECT TO SOLICIT ADDITIONAL QUOTATIONS. THEY SHALL ALSO GIVE CONSIDERATION, WHERE POSSIBLE AND PRACTICAL, TO BUSINESSES WITH A PHYSICAL LOCATION WITHIN THE CITY, OR IF

NOT POSSIBLE, WITHIN GENESEE COUNTY.

THE PURCHASING DIRECTOR MAY ASSESS THESE PURCHASES AS TO THE FEASIBILITY OF FUTURE FORMAL COMPETITIVE PROCESSES FOR THE GOODS AND SERVICES BEING PROCURED IN THIS MANNER.

§ 18-21.7 PUBLIC ENTITY PURCHASES.

THE PURCHASING DIRECTOR IS AUTHORIZED, IF DETERMINED TO BE IN THE BEST INTERESTS OF THE CITY, TO PURCHASE GOODS AND SERVICES FOR THE CITY, RELYING ON COMPETITIVE PROCESSES UNDERTAKEN BY OTHER PUBLIC ENTITIES, INCLUDING THE FEDERAL GOVERNMENT, THE STATE OF MICHIGAN, MUNICIPALITIES, SPECIAL PURPOSE DISTRICTS AND AUTHORITIES, AND SCHOOL DISTRICTS.

THE PURCHASING DIRECTOR MAY APPROVE OR RECOMMEND THE APPROVAL OF A CONTRACT WITH THE VENDOR WHO HAS A CONTRACT WITH ANOTHER PUBLIC ENTITY FOR GOODS OR SERVICES THAT THE CITY WOULD LIKE TO PURCHASE, IF AT A MINIMUM:

(1) THE CONTRACT IS FOR THE SAME GOODS, SERVICES, OR CONSTRUCTION AND AT THE SAME PRICE, TERMS, AND CONDITIONS AS ARE IN THE CONTRACT WITH THE OTHER PUBLIC ENTITY; AND,

(2) THE CONTRACT BETWEEN THE PERSON AND THE OTHER PUBLIC ENTITY WAS AWARDED IN A MANNER CONSISTENT WITH PROCUREMENT BEST PRACTICES AS DETERMINED BY THE PURCHASING DIRECTOR.

§ 18-21.8 SOLE SOURCE PURCHASES.

A PURCHASE ORDER AGREEMENT OR FORMAL WRITTEN CONTRACT FOR THE PURCHASE OF GOODS AND SERVICES MAY BE AWARDED IN THE DISCRETION OF THE PURCHASING DIRECTOR, WITHOUT A FORMAL COMPETITIVE PROCESS WHEN, AFTER CONDUCTING A GOOD FAITH REVIEW OF AVAILABLE SOURCES AND EXISTING EQUIPMENT, THE PURCHASING DIRECTOR DETERMINES THAT:

(1) THERE IS ONLY ONE SOURCE FOR THE REQUIRED SUPPLY, SERVICE, OR CONSTRUCTION ITEM; OR

(2) THE CHOSEN SOURCE IS THE BEST CHOICE IN THE INTERESTS OF EQUIPMENT STANDARDIZATION AND EFFICIENT OPERATIONS. THE PURCHASING DIRECTOR, IN CONSULTATION WITH THE DEPARTMENT HEAD, SHALL OBTAIN A FORMAL PROPOSAL FROM THE VENDOR SPECIFIC TO THE NEEDED GOODS AND SERVICES, AND SHALL MAKE ALL GOOD FAITH EFFORTS TO SECURE A PRICE THAT IS IN THE BEST INTERESTS OF THE CITY. THE REQUESTING DEPARTMENT SHALL PRODUCE A WRITTEN EVALUATION OF THE PROPOSED SOLE SOURCE PURCHASE, DETAILING THE RATIONALE FOR THE RECOMMENDATION.

(3) THE PURCHASE FOLLOWS THE REQUIREMENTS FOR APPROVAL THRESHOLDS

OF § 18-21.3 COMPETITIVE SEALED BIDDING - SECTION (8) AND § 18-21.4 COMPETITIVE SEALED PROPOSALS - SECTION (9).

§ 18-21.9 EMERGENCY PURCHASES.

NOTWITHSTANDING ANY OTHER PROVISION OF THESE REGULATIONS, THE PURCHASING DIRECTOR MAY MAKE OR AUTHORIZE OTHERS TO MAKE EMERGENCY PURCHASES OF SUPPLIES, SERVICES, OR CONSTRUCTION ITEMS WHEN THERE EXISTS A THREAT TO PUBLIC HEALTH, WELFARE, OR SAFETY; PROVIDED THAT THE EMERGENCY PROCUREMENTS SHALL BE MADE WITH SUCH COMPETITION AS IS PRACTICABLE UNDER THE CIRCUMSTANCES. THE REQUESTING DEPARTMENT SHALL PRODUCE A WRITTEN RATIONALE OF THE CIRCUMSTANCES SURROUNDING THE NEED FOR AN EMERGENCY PURCHASE, THE COST, AND ANY EFFORTS MADE TO SECURE COMPETITIVE PRICES.

IF THE AUTHORIZED PURCHASE IS FOR LESS THAN $20,000, THE DECISION OF THE PURCHASING DIRECTOR SHALL BE FINAL, AND A NOTATION WILL BE MADE IN THE ELECTRONIC RECORD KEEPING FOR THE PURCHASE REQUEST. IF TIME PERMITS, THE PURCHASE SHOULD FOLLOW THE REQUIREMENTS FOR APPROVAL THRESHOLDS OF § 18-21.3 COMPETITIVE SEALED BIDDING - SECTION (8) AND § 18-21.4 COMPETITIVE SEALED PROPOSALS - SECTION (9).

§ 18-21.10 REPORTING AND ACCOUNTABILITY.

THE PURCHASING DIRECTOR, ON A MONTHLY BASIS, SHALL PREPARE A REPORT THAT PROVIDES TOTAL EXPENDITURES WITH SPECIFIC VENDORS TO DATE THAT HAVE EXCEEDED A TOTAL OF $10,000.00. THIS REPORT SHALL INCLUDE THE PURCHASE ORDER NUMBER, THE AMOUNT OF THE PURCHASE, THE DEPARTMENT REQUESTING THE GOODS AND SERVICES, AND A DESCRIPTION OF THE GOODS AND SERVICES.

THE REPORT SHALL BE MADE PUBLICALLY AVAILABLE VIA ELECTRONIC MEANS ON A MONTHLY BASIS. THE PURCHASING DIRECTOR SHALL BE AVAILABLE TO REVIEW THE REPORT AND PROVIDE ADDITIONAL INFORMATION AS MAY BE REQUESTED BY THE CITY COUNCIL, OR THEIR DESIGNATED COMMITTEE.

§ 18-21.11 CONTRACTS.

WHERE FINAL AGREEMENT FOR THE PURCHASE OF GOODS OR SERVICES REQUIRES A CONTRACT BINDING THE CITY, OTHER THAN THE ISSUANCE OF A PURCHASE ORDER OR USE OF A PROCUREMENT CARD, THE AGREEMENT MUST BE APPROVED BY THE CITY ATTORNEY BEFORE PRESENTING IT TO THE PERSON AUTHORIZED TO BIND THE CITY.

A MODIFICATION OF A CONTRACT MUST BE APPROVED IN THE SAME MANNER THAT THE CONTRACT WAS APPROVED. ALL CONTRACT MODIFICATIONS MUST BE IN WRITING AND APPROVED IN ADVANCE BY THE CITY ATTORNEY.

DEPARTMENT HEADS ARE RESPONSIBLE FOR MONITORING THE TERMS OF ANY AGREEMENT APPROVED FOR GOODS AND SERVICES FOR THEIR AREA OF RESPONSIBILITY. THE PURCHASING DIRECTOR AND DEPARTMENT HEADS SHALL ASSURE

THAT A CONTRACT ADMINISTRATION SYSTEM IS DESIGNED AND IMPLEMENTED TO ENSURE THAT A CONTRACTOR IS PERFORMING IN ACCORDANCE WITH THE SOLICITATION UNDER WHICH THE CONTRACT WAS AWARDED AND THE TERMS AND CONDITIONS OF THE CONTRACT, AND THAT THE DEPARTMENT IS IN COMPLIANCE WITH ALL REQUIREMENTS OF ANY APPLICABLE GRANTS.

§ 18-21.12 DUE DILIGENCE.

AS PART OF THE EVALUATION OF ANY VENDOR PROPOSING TO DO BUSINESS WITH THE CITY, THE PURCHASING DIRECTOR OR DESIGNEE MAY, AT REASONABLE TIMES, INSPECT THE PART OF THE PLANT, PLACE OF BUSINESS, OR WORKSITE OF A CONTRACTOR OR SUBCONTRACTOR AT ANY TIER THAT IS PERTINENT TO THE PERFORMANCE OF ANY CONTRACT AWARDED, OR TO BE AWARDED, BY THE CITY.

THE CITY MAY ALSO, AT REASONABLE TIMES AND PLACES, AUDIT THE BOOKS AND RECORDS OF ANY CONTRACTOR WHO HAS SUBMITTED COST OR PRICING DATA AS A PART OF ITS BID OR PROPOSAL, TO THE EXTENT THAT THE BOOKS, DOCUMENTS, PAPER, AND RECORDS ARE PERTINENT TO THE COST OR PRICING DATA FOR THREE (3) YEARS FROM THE DATE OF FINAL PAYMENT UNDER THE CONTRACT.

§ 18-21.13 REPORTING OF ANTICOMPETITIVE PRACTICES.

WHEN FOR ANY REASON COLLUSION OR OTHER ANTICOMPETITIVE PRACTICES ARE SUSPECTED AMONG ANY BIDDERS OR RESPONDENTS, A NOTICE OF THE RELEVANT FACTS SHALL BE TRANSMITTED TO THE CITY ATTORNEY'S OFFICE.

§ 18-21.14 DEBARMENT OR SUSPENSION.

THE PURCHASING DIRECTOR, WITH THE CONSENT OF THE CITY ATTORNEY AND THE APPROVAL OF THE MAYOR AND CITY COUNCIL, IS AUTHORIZED TO DEBAR A PERSON FOR CAUSE FROM CONSIDERATION FOR AWARD OF CONTRACTS. THE DEBARMENT SHALL BE FOR A PERIOD OF NOT MORE THAN THREE (3) YEARS. AFTER CONSULTATION WITH THE CITY ATTORNEY, THE PURCHASING DIRECTOR IS AUTHORIZED TO SUSPEND A PERSON FROM CONSIDERATION FOR AWARD OF CONTRACTS IF THERE IS PROBABLE CAUSE TO BELIEVE THAT THE PERSON HAS ENGAGED IN ANY ACTIVITY THAT MIGHT LEAD TO DEBARMENT. THE SUSPENSION SHALL BE FOR A PERIOD NOT TO EXCEED THREE (3) YEARS. THE CAUSES FOR DEBARMENT INCLUDE:

(1) CONVICTION FOR COMMISSION OF A CRIMINAL OFFENSE AS AN INCIDENT TO OBTAINING OR ATTEMPTING TO OBTAIN A PUBLIC OR PRIVATE CONTRACT OR SUBCONTRACT, OR IN THE PERFORMANCE OF THE CONTRACT OR SUBCONTRACT;

(2) CONVICTION UNDER STATE OR FEDERAL STATUTES OF EMBEZZLEMENT, THEFT, FORGERY, BRIBERY, FALSIFICATION OR DESTRUCTION OF RECORDS, RECEIVING STOLEN PROPERTY, OR ANY OTHER OFFENSE INDICATING A LACK OF BUSINESS INTEGRITY OR BUSINESS HONESTY THAT

CURRENTLY, SERIOUSLY, AND DIRECTLY AFFECTS RESPONSIBILITY AS A CITY CONTRACTOR;

(3) CONVICTION UNDER STATE OR FEDERAL ANTITRUST STATUTES ARISING OUT OF THE SUBMISSION OF BIDS OR PROPOSALS;

(4) VIOLATION OF CONTRACT PROVISIONS, AS SET FORTH BELOW, OF A CHARACTER THAT IS REGARDED BY THE PURCHASING DIRECTOR TO BE SO SERIOUS AS TO JUSTIFY DEBARMENT ACTION:

(A) DELIBERATE FAILURE, WITHOUT GOOD CAUSE, TO PERFORM IN ACCORDANCE WITH THE SPECIFICATIONS OR WITHIN THE TIME LIMIT PROVIDED IN THE CONTRACT; OR

(B) A RECENT RECORD OF FAILURE TO PERFORM, OR OF UNSATISFACTORY PERFORMANCE, IN ACCORDANCE WITH THE TERMS OF ONE OR MORE CONTRACTS; PROVIDED THAT FAILURE TO PERFORM OR UNSATISFACTORY PERFORMANCE CAUSED BY ACTS BEYOND THE CONTROL OF THE CONTRACTOR SHALL NOT BE CONSIDERED TO BE A BASIS FOR DEBARMENT;

(5) ANY OTHER CAUSE THE PURCHASING DIRECTOR DETERMINES TO BE SO SERIOUS AND COMPELLING AS TO AFFECT RESPONSIBILITY AS A CITY CONTRACTOR, INCLUDING DEBARMENT BY ANOTHER GOVERNMENTAL ENTITY FOR ANY CAUSE LISTED IN THESE REGULATIONS; AND

(6) FOR VIOLATION OF THE ETHICAL STANDARDS AS SET FORTH IN THE CITY OF FLINT CODE OF CONDUCT POLICY.

THE PURCHASING DIRECTOR SHALL ISSUE A WRITTEN DECISION TO DEBAR OR SUSPEND. THE DECISION SHALL STATE THE REASONS FOR THE ACTION TAKEN AND INFORM THE DEBARRED OR SUSPENDED PERSON INVOLVED OF THEIR RIGHTS CONCERNING JUDICIAL OR ADMINISTRATIVE REVIEW. ANY PERSON RECOMMENDED TO BE DEBARRED PURSUANT TO THIS SECTION SHALL BE GIVEN ADVANCE WRITTEN NOTICE AND SHALL BE AFFORDED THE RIGHT TO CONTEST THE RECOMMENDATION BEFORE THE CITY COUNCIL.

§ 18-21.15 BID PROTESTS.

(1) *RIGHT TO PROTEST.* ANY ACTUAL OR PROSPECTIVE BIDDER, RESPONDENT, OR CONTRACTOR WHO IS AGGRIEVED IN CONNECTION WITH THE SOLICITATION OR AWARD OF A PURCHASE ORDER AGREEMENT OR CONTRACT MAY PROTEST THE ACTION TO THE CITY.

(2) *PROCESS FOR FILING A PROTEST.* A PROTEST WITH RESPECT TO AN INVITATION FOR BIDS OR REQUEST FOR PROPOSALS MUST BE SUBMITTED IN WRITING TO THE PURCHASING DIRECTOR. THE PROTEST MUST BE ENTITLED "BID PROTEST" AND MUST CLEARLY

IDENTIFY THE SOLICITATION AND AWARD UNDER PROTEST, AND MUST STATE THE GROUNDS FOR THE PROTEST. THE PURCHASING DIRECTOR SHALL PROVIDE A COPY OF ANY TIMELY BID PROTEST TO THE MAYOR AND CITY COUNCIL WITHIN SEVEN (7) CALENDAR DAYS OF ITS SUBMISSION.

(3) *TIME LIMITS FOR FILING.* PROTESTS MUST BE RECEIVED BY THE PURCHASING DIRECTOR NO LATER THAN SEVEN (7) CALENDAR DAYS AFTER THE AGGRIEVED PERSON KNEW OR SHOULD HAVE KNOWN OF THE FACTS GIVING RISE TO THE PROTEST, AND IN NO EVENT LATER THAN FOURTEEN (14) CALENDAR DAYS AFTER AWARD OF THE PURCHASE ORDER AGREEMENT OR CONTRACT. FAILURE TO FILE A BID PROTEST WITHIN THESE TIME LIMITS CONSTITUTES A WAIVER OF THE PROTEST.

(4) *STAY OF PROCUREMENTS DURING PROTESTS.* IN THE EVENT A TIMELY PROTEST IS SUBMITTED TO THE PURCHASING DIRECTOR UNDER THIS SECTION, THE PURCHASING DIRECTOR SHALL NOT PROCEED FURTHER WITH THE SOLICITATION, AWARD, OR PERFORMANCE OF THE PURCHASE ORDER AGREEMENT OR CONTRACT UNTIL THE PROTEST IS SUSTAINED OR DISMISSED, OR THE CITY COUNCIL MAKES A DETERMINATION ON THE RECORD THAT THE AWARD OR PERFORMANCE OF A PURCHASE ORDER AGREEMENT OR CONTRACT WITHOUT DELAY IS NECESSARY TO PROTECT SUBSTANTIAL INTERESTS OF THE CITY; PROVIDED HOWEVER THAT IF THE POSTPONEMENT OF THE PURCHASE OF GOODS OR SERVICES IMPAIRS THE ABILITY OF THE CITY TO CARRY OUT ITS SERVICES, THE PURCHASING DIRECTOR, WITH THE APPROVAL OF THE MAYOR, MAY TAKE NECESSARY STEPS TO OBTAIN THE MINIMUM AMOUNT OF GOODS AND SERVICES NECESSARY TO ENABLE CITY SERVICES TO CONTINUE.

(5) *DECISION BY THE PURCHASING DIRECTOR.* THE PURCHASING DIRECTOR SHALL ISSUE A WRITTEN DECISION SUSTAINING OR DENYING THE BID PROTEST WITHIN FIFTEEN (15) DAYS OF RECEIPT OF A WRITTEN AND TIMELY PROTEST. A COPY OF THE PURCHASING DIRECTOR'S DECISION MUST BE PROVIDED TO THE PROTESTING BIDDER OR PROPOSER, THE MAYOR, AND THE CITY COUNCIL.

(6) *APPEAL TO THE MAYOR.* A PROTESTING BIDDER OR PROPOSER MAY APPEAL THE PURCHASING DIRECTOR'S DECISION TO THE MAYOR BY FILING A WRITTEN APPEAL WITH THE MAYOR WITHIN SEVEN (7) DAYS OF THE DATE OF THE PURCHASING DIRECTOR'S DECISION. THE MAYOR SHALL CONDUCT THE INVESTIGATION AS DEEMED NECESSARY TO RESPOND TO THE APPEAL, AND SHALL PROVIDE HIS OR HER DECISION ON THE APPEAL WITHIN SEVEN (7) DAYS.

(7) *APPEAL TO CITY COUNCIL.* A PROTESTING BIDDER OR PROPOSER MAY APPEAL THE PURCHASING DIRECTOR'S DECISION TO THE CITY COUNCIL BY FILING A WRITTEN APPEAL WITH THE CITY CLERK WITHIN SEVEN (7) DAYS OF THE DATE OF THE MAYOR'S DECISION. THE PROTESTING BIDDER SHALL BE AFFORDED AN OPPORTUNITY AT THE NEXT REGULARLY SCHEDULED CITY COUNCIL MEETING TO ADDRESS THE CITY COUNCIL AND STATE THE GROUNDS FOR THE APPEAL. NO LATER THAN THE NEXT REGULARLY SCHEDULED MEETING, CITY COUNCIL

SHALL MAKE ITS DECISION ON THE APPEAL.

§ 18-21.16 CONTRACT CLAIMS.

(1) *DECISION OF THE PURCHASING DIRECTOR.* ALL CLAIMS BY A CONTRACTOR AGAINST THE CITY RELATING TO A CONTRACT SHALL BE SUBMITTED IN WRITING TO THE PURCHASING DIRECTOR FOR A DECISION. THE SUBMISSION MUST IDENTIFY THE GROUNDS FOR THE CLAIM. THE CONTRACTOR MAY REQUEST A CONFERENCE WITH THE PURCHASING DIRECTOR ON THE CLAIM. CLAIMS INCLUDE, WITHOUT LIMITATION, DISPUTES ARISING UNDER A CONTRACT, AND THOSE BASED UPON BREACH OF CONTRACT, MISTAKE, MISREPRESENTATION, OR OTHER CAUSE FOR CONTRACT MODIFICATION OR RESCISSION.

(2) *NOTICE TO THE CONTRACTOR OF THE PURCHASING DIRECTOR'S DECISION.* THE DECISION OF THE PURCHASING DIRECTOR SHALL BE ISSUED IN WRITING WITHIN THIRTY (30) DAYS OF SUBMISSION, AND SHALL BE IMMEDIATELY MAILED OR OTHERWISE FURNISHED TO THE CONTRACTOR. THE DECISION SHALL STATE THE REASONS FOR THE DECISION REACHED, AND SHALL INFORM THE CONTRACTOR OF ITS APPEAL RIGHTS UNDER SUBSECTION (3) OF THIS SECTION. THE PURCHASING DIRECTOR SHALL CONSULT WITH THE CITY ATTORNEY PRIOR TO MAKING A DECISION DENYING THE CONTRACTOR'S CLAIM IN WHOLE OR IN PART.

(3) *FINALITY OF PURCHASING DIRECTOR DECISION; CONTRACTOR'S RIGHT TO APPEAL.* THE PURCHASING DIRECTOR DECISION SHALL BE FINAL AND CONCLUSIVE UNLESS, WITHIN SEVEN (7) CALENDAR DAYS FROM THE DATE OF RECEIPT OF THE DECISION, THE CONTRACTOR MAILS OR OTHERWISE DELIVERS A WRITTEN APPEAL TO THE CITY ADMINISTRATOR.

(4) *APPEAL TO THE CITY ADMINISTRATOR.* A PROTESTING CONTRACTOR MAY APPEAL THE PURCHASING DIRECTOR'S DECISION TO THE CITY ADMINISTRATOR BY FILING A WRITTEN APPEAL WITH THE CITY ADMINISTRATOR WITHIN SEVEN (7) DAYS OF THE DATE OF THE PURCHASING DIRECTOR'S DECISION. THE CITY ADMINISTRATOR SHALL CONDUCT THE INVESTIGATION AS DEEMED NECESSARY TO RESPOND TO THE APPEAL, AND SHALL PROVIDE HIS DECISION ON THE APPEAL WITHIN SEVEN (7) DAYS.

§ 18-21.17 AUTHORITY OF THE PURCHASING DIRECTOR TO SETTLE BID PROTESTS AND CONTRACT CLAIMS.

THE PURCHASING DIRECTOR IS AUTHORIZED TO SETTLE ANY PROTEST REGARDING THE SOLICITATION OR AWARD OF A PURCHASE ORDER AGREEMENT OR CITY CONTRACT, OR ANY CLAIM ARISING OUT OF THE PERFORMANCE OF A PURCHASE ORDER AGREEMENT OR CITY CONTRACT, PRIOR TO THE COMMENCEMENT OF AN ACTION IN A COURT OF COMPETENT JURISDICTION.

§ 18-21.18 CANCELLATION OF SOLICITATIONS FOR THE PURCHASE OF GOODS AND SERVICES.

AT ANY TIME THE CITY DETERMINES THAT A SOLICITATION FOR GOODS OR SERVICES SHOULD BE CANCELLED BECAUSE IT IS NOT IN THE BEST INTERESTS OF THE CITY TO MAKE THE PROCUREMENT, THE

PURCHASING DIRECTOR SHALL IMMEDIATELY NOTIFY THE POTENTIAL VENDORS OF THE CITY'S DECISION. HOWEVER, THE CITY SHALL HAVE NO OBLIGATION OR RESPONSIBILITY FOR ANY COSTS OR INCONVENIENCES INCURRED BY ANY POTENTIAL VENDOR, UNLESS AN AWARD HAS BEEN FORMALLY MADE AND ACCEPTED BY ISSUANCE OF A PURCHASE ORDER OR SIGNING OF A CONTRACT.

§ 18-21.19 ETHICS IN PURCHASING.

THE PROCESS OF PURCHASING GOODS AND SERVICES IS DESIGNED TO ENSURE COMPETITIVE PROCUREMENT CONDUCTED IN AN ETHICAL AND TIMELY MANNER IN ORDER FOR THE CITY TO CARRY OUT ITS DUTIES.

ALL EMPLOYEES DELEGATED AUTHORITY WITH RESPECT TO ALL PURCHASES OF GOODS AND SERVICES ARE CHARGED WITH THE RESPONSIBILITY OF MAKING PURCHASES IN A COMPETITIVE AND ETHICAL MANNER, AND FOR ADHERING IN ALL RESPECTS TO THE CITY OF FLINT CODE OF CONDUCT POLICY. VIOLATION OF THE CITY OF FLINT CODE OF CONDUCT POLICY, INCLUDING THE USE OF CITY RESOURCES FOR PERSONAL USE OR GAIN IS GROUNDS FOR TERMINATION OF EMPLOYMENT AND POSSIBLE CRIMINAL PROSECUTION.

LIKEWISE, PERSONS OR ENTITIES PROPOSING TO, OR ENGAGED IN, THE PROVISION OF GOODS AND SERVICES TO THE CITY ARE CHARGED WITH THE RESPONSIBILITY OF PROPOSING AND PROVIDING GOODS AND SERVICES IN A COMPETITIVE AND ETHICAL MANNER.

WHILE A PROCUREMENT IS PENDING, BIDDERS AND PROPOSERS SHALL NOT COMMUNICATE ABOUT THE SOLICITATION WITH ANY CITY EMPLOYEE, AGENT, OR ELECTED OFFICIAL, OTHER THAN THE PURCHASING DIRECTOR OR OTHER CITY PERSONNEL IDENTIFIED IN THE SOLICITATION.

TO THE EXTENT THAT VIOLATIONS OF THE ETHICAL STANDARDS OF CONDUCT SET FORTH IN THIS ARTICLE CONSTITUTE VIOLATIONS OF THE MICHIGAN PENAL CODE, THEY SHALL BE PUNISHABLE AS PROVIDED THEREIN. THE PENALTIES SHALL BE IN ADDITION TO THE CIVIL SANCTIONS SET FORTH IN THIS ARTICLE. CRIMINAL, CIVIL, AND ADMINISTRATIVE SANCTIONS AGAINST EMPLOYEES OR NON-EMPLOYEES THAT ARE IN EXISTENCE ON THE EFFECTIVE DATE OF THIS ARTICLE SHALL NOT BE IMPAIRED.

IT SHALL BE UNETHICAL AND GROUNDS FOR DEBARMENT AND POTENTIAL CRIMINAL PROSECUTION FOR ANY PERSON TO OFFER, GIVE, OR AGREE TO GIVE TO ANY CITY EMPLOYEE A GRATUITY, AN OFFER OF EMPLOYMENT, OR ANYTHING ELSE OF VALUE IN CONNECTION WITH ANY DECISION TO APPROVE, DISAPPROVE, OR RECOMMEND THE AWARD OF A CONTRACT, OR IN CONNECTION WITH ANY DECISION WITH REGARD TO A BID PROTEST, OR WITH INTENT TO INFLUENCE THE CONTENT OF ANY SPECIFICATIONS OR PROCUREMENT STANDARDS, OR ADVICE, INVESTIGATION, AUDIT REPORT, OR ANY OTHER ADVISORY COMMUNICATION RELATED TO A PROCUREMENT OR CONTRACT UNDER THIS ARTICLE.

IT SHALL BE UNETHICAL AND A VIOLATION OF THE CITY OF FLINT CODE OF CONDUCT POLICY AND

GROUNDS FOR POSSIBLE TERMINATION AND CRIMINAL PROSECUTION FOR ANY CITY EMPLOYEE TO SOLICIT, DEMAND, ACCEPT, OR AGREE TO ACCEPT FROM ANOTHER PERSON A GRATUITY, AN OFFER OF EMPLOYMENT, OR ANYTHING ELSE OF VALUE IN CONNECTION WITH ANY DECISION TO APPROVE, DISAPPROVE, OR RECOMMEND THE AWARD OF A CONTRACT, OR IN CONNECTION WITH ANY DECISION WITH REGARD TO A BID PROTEST, OR WITH INTENT TO INFLUENCE THE CONTENT OF ANY SPECIFICATIONS OR PROCUREMENT STANDARDS, OR ADVICE, INVESTIGATION, AUDIT REPORT, OR ANY OTHER ADVISORY COMMUNICATION RELATED TO A PROCUREMENT OR CONTRACT UNDER THIS ARTICLE.

IT SHALL BE UNETHICAL AND GROUNDS FOR DEBARMENT AND POTENTIAL CRIMINAL PROSECUTION FOR ANY PAYMENT, GRATUITY, OR OFFER OF EMPLOYMENT TO BE MADE BY OR ON BEHALF OF A SUBCONTRACTOR UNDER A CONTRACT TO THE PRIME CONTRACTOR OR HIGHER TIER SUBCONTRACTOR OR ANY PERSON ASSOCIATED THEREWITH, AS AN INDUCEMENT FOR THE AWARD OF A SUBCONTRACT OR ORDER.

§ ~~18-21.14~~ 18-21.20 SALE OR LEASE OF CITY OWNED PROPERTY.

No interest in real property of the City ~~of Flint~~ shall be disposed of, transferred, or otherwise alienated unless by ordinance or resolution of the City Council.

Sec. 2. This ordinance shall become effective the 1st **day of** May, **~~2014~~** 2015.

Adopted this 10th **day of** April, **2015 A.D.**

For Immediate Release

EM Updates Council, Requests support for Emergency Loan and District Court Consolidation; Adjusts Salaries for Mayor and Council

Flint, Michigan – April 13, 2015 – By letter to City Council issued today, Emergency Manager Jerry Ambrose congratulated City Council for their recent actions committing to restoring and maintaining the City's financial solvency. Mr. Ambrose stated that recent actions to adopt a series of ordinances requiring commitment to establishing appropriate financial reserves and an improved planning and budgeting process indicate that the Council understands the need to restore and maintain Flint's financial solvency. "While there is much yet to do, these are positive steps in the right direction," said Mr. Ambrose. "The ongoing challenge will be to adhere to the requirements the City Council has adopted themselves."

Mr. Ambrose's letter also reiterated the priority issues currently facing the City – developing a long range financial plan, beginning with the upcoming FY16 and FY17 budget; continuing to address concerns with water safety, quality and affordability; and stabilizing resources for public safety. "These are clearly the top priority issues, and ones which require the cooperation of all if they are to be successfully addressed," stated Mr. Ambrose. "Unfortunately, resources are extremely limited, and we must make decisions which address the most critical issues in a financially sound manner – and that often means we cannot do everything everybody wants."

Some of the ingredients of restoring Flint's financial solvency on a sustainable basis, according to Mr. Ambrose, include obtaining a $7 million loan to finance the accumulated

–CONTINUE–

General Fund deficit and approving the consolidation of the 67th and 68th District Courts. Both issues are pending before City Council and Mr. Ambrose is hopeful for a quick positive response. "The terms and conditions offered with this loan equate to a good deal for the City and will enable it to begin to more quickly rebuild its financial solvency. Approving the court consolidation will reduce City expenses by $8.4 million over the next 10 years and will help to provide some stability in funding other public safety services."

Mr. Ambrose also presented Council with actions he is taking to continue the progress towards transition, including an updated purchasing ordinance and an order officially defining the role of the new City Administrator as the chief administrative officer for the City. "Moving the City forward in today's environment requires professional managers, clear responsibilities, and modern practices," said Ambrose. "These actions move in that direction, and hopefully move the Council forward in truly becoming the governing body of the City, focused on policies and accountability for moving the City forward based on its vision, mission, and goals."

Recognizing the increasing role of the Mayor and Council as the City transitions to home rule with oversight by a Receivership Transition Advisory Board, Mr. Ambrose announced that he is reestablishing the salaries for Mayor and Council at the levels in place before the City was most recently placed into state receivership. He noted that Council meetings are now held twice per month, with committee meetings held once per month, and the Mayor is now much more engaged in a Chief Executive role. Continued receipt of the re-established salaries, however, will be contingent upon attainment of certain training levels. These training levels were established in prior orders of the Emergency Manager, and Councilmembers will have until November 1, 2015 to obtain it, or their salary will be reduced to the current level.

Subject: Flint Water Situation

Good afternoon Dennis –

It was great talking with you at the Michigan Policy Conference last week. I am writing to follow up. I am hoping that we can schedule a meeting with the Michigan Health Endowment Fund to discuss the possibilities of the getting a grant to help with the water situation in Flint. At least some subsidy dollars for the very poor that are paying water bills three times higher than the average citizen in this state. I can make myself available to meet in Lansing.

Thank you for your help with this critical issue. I look forward to hearing from you soon.

Enjoy your day!

Subject: Re: United Way of Genesee County Proposal

Jamie,

Thank you for sending the proposal from the United Way of Genesee County to the Michigan Health Endowment Fund, requesting a $500,000 grant to assist City of Flint residents with their water bills. Thank you, too, for sharing letters of support from Flint community leaders.

I will be sharing the proposal with the MHEF Grantmaking Committee, which is currently preparing the Fund's 2015 grants program. I anticipate that in late July, we will be announcing a program and accepting applications until mid-September. Grants will be awarded in December and early next year. As we discussed, the Grants Committee is considering inviting community foundations to identify the most pressing health and wellness issues in their regions and submit proposals to the MHEF. If our board supports this approach, the best opportunity to seek a $500,000 grant will be through your local community foundation. After the committee has prepared its program recommendation for approval by the MHEF board, I will be in touch with you about next steps.

Thanks again.

Paul

Subject: Fwd: United Way of Genesee County Proposal

Gentlemen, we do desperately need this relief for our water customers. Our plan is to provide assistance to those with a record of payment who need a bridge to a sustainable payment plan. This helps the customers and their families and also keeps another paying customer on our system as we work to stabilize. Please do see what can be done for this to be a direct grant instead of waiting months and months and then restarting at the community foundation level. Anything you can do...please.
Thanks, Dayne

Jamie,

Thank you for sending the proposal from the United Way of Genesee County to the Michigan Health Endowment Fund, requesting a $500,000 grant to assist City of Flint residents with their water bills. Thank you, too, for sharing letters of support from Flint community leaders.

I will be sharing the proposal with the MHEF Grantmaking Committee, which is currently preparing the Fund's 2015 grants program. I anticipate that in late July, we will be announcing a program and accepting applications until mid-September. Grants will be awarded in December and early next year. As we discussed, the Grants Committee is considering inviting community foundations to identify the most pressing health and wellness issues in their regions and submit proposals to the MHEF. If our board supports this approach, the best opportunity to seek a $500,000 grant will be through your local community foundation. After the committee has prepared its program recommendation for approval by the MHEF board, I will be in touch with you about next steps.

Thanks again.

Paul

Chief,
Just got a call from Wendy re the notes from the Flint meeting. I took a picture of your notes and sent them to you via text. Attached is a copy of my notes.

20150722_Meeting with Flint's Clean Water Coalition
Attendees: Rev. Wallace Hill, Rev. Allen Overton, Melissa May, Claire McClinton and Dr. Laura Sutherland (professor of Chemical Engineering at Kettering)

NOTES:

- Issue is not rust, but TTHM and lead
  - ✓ Rust…not an issue
  - ✓ TTHM should be taken care by the granular filter currently being installed
  - ✓ Lead is the issue
    - No one from the group has contacted the city
    - Lead is too small to filter
- Excess levels of chlorine increases the PH levels execrating metallic decomposition of iron, copper and lead
- KWA Pipeline
- RTAB's activity
- County Health Department have asked the city for information city not forth coming

TODO:

- Water Rates---Treasury
  - ✓ Rate structure
  - ✓ High flushing activity and rates…should result in a discount
  - ✓ How are the current rate calculated
  - ✓ RTBA reversal of the city's decision to tax the DDA.
- Lead—DHHS and DEQ
  - ✓ Dennis Muchmore will follow up with DHHS to check on the lead content in Flint water.
  - ✓ Follow up with DEQ
    - DEQ has results of testing water
  - ✓ Pastor Overton will send a complaint to the city
- KWA Pipeline:
  - ✓ Governance of KWA
  - ✓ Who paying for the buildout
  - ✓ Will the KWA water be mixed with the Flint River water

Subject: RE: RDS/DM/EC/JW/NKhouri/TSaxton/WWorkman - Local Government Update

Next week sometime can Wayne & I have a follow up conversation with you re Flint water? Wayne & I had a call with Brad W. @ DEQ. He is getting back to us re some of the items on your list. So maybe mid-week?
I think the bottom line is Wayne, Brad & I (we would "volunteer") to meet with your minister group here in Lansing [to the extent we can] provide info to some of the issues they raised with you. It may be better that you are not at the meeting. Of course that is your call but maybe let us 'peons' do it. Harvey could be there in your stead; since he knows them. I am sure whatever we convey they probably won't be happy.

Wayne-
We need to have more discussion relating to Flint water. There seem to be even more issues regarding the water than there should be. I'll have a series of questions that I really need some answers to if you can have someone who understands the problems there. The people there just seem to be getting a raw deal from the city particularly in terms of the information they are getting. I know you are as worried about their health as I am so we kind of need to get answers to some of these concerns.

Good Morning All,

Thank you, again.

Is it possible to delay the shipment of the filters until next Tuesday, August 4?

I was just informed they are creating a distribution plan in Flint so the filters can be given to the community when received. This will alleviate the church having to store the filters.

I apologize for not communicating this sooner. Please let me know if the delay is possible.

Stacie Clayton

Bob,

I hope all is well for you and I look forward to seeing you this fall at our vendor summit.

Meijer needs some help supporting the Flint Michigan community and was hoping Clorox can jump in.

They are having some issues with water quality and are looking for a donation of 1500 water filters for drinking water.

Would Clorox consider donating as a silent partner with Meijer?

Please let me know as we want to support the community.

Best Regards,

Jamie

Subject: RE: Director's Office Assignment -- Flint - need update asap

I apologize for the delay in responding more specifically to this assignment, it took some time to review our Childhood Lead Poisoning Prevention program data to see if it might contribute to the understanding of the situation in Flint with their water supply. Here is what we found:

We looked at lead testing results for May 2014-April 2015, which is the 12 month time frame just after Flint started drawing their water from the river (water source changed in April 2014).

We compared lead testing rates and lead testing results to the same time frame for the previous 3 years, to see if there were any patterns that suggested that there were increased rates of lead poisoning after the water supply was switched. Per the attached charts –

- Lead testing rates remained about the same from year to year (chart on the right).
- There was a spike in elevated blood lead tests from July-September 2014 (chart on the left, gold line).
- However that pattern was not terribly different from what we saw in the previous three years, especially in 2011-2012 (we are working with our Epidemiologist to statistically verify any significant differences).
- We commonly see a 'seasonal effect' with lead, related to people opening and closing windows more

often in the summer, which disturbs old deteriorating paint on the windows, sills and sashes. Window fans frequently blow and spread the lead dust from the deteriorating paint to other parts of the room/house. We suspect that the summer data spike may be related to this effect.

- If the home water supply lines and/or river water were contributing to elevated blood lead tests, we expected that the increased rates would extend beyond the summer, but they drop quite a bit from September to October, stayed low over the winter, and are just starting to tail up again in the spring of 2015.

So upon review, we don't believe our data demonstrates an increase in lead poisoning rates that might be attributable to the change in water source for Flint. We recognize that lead exposure via the water is only a small piece of what may be happening for families in Flint, however, we hope the information is helpful.

Subject: Re: '20150804_Meeting with Flint's Clean Water Coalition'

I agree. It's hard to get to yes or satisfaction with certain types of community advocates because no matter what you do, they will always grind an ax on something.

The reason why I did not want to discuss the kitchen filters is that the Clean Water folks, not the pastors, expressed the following issues re the filters at a meeting Overton held last week:

* The Concerned Pastors group would like filters to go only to low income families. The Coalition for Clean Water believes anyone should be able to get the filters since everyone drinks the same water no matter income.
* The Coalition believes 1500 is not nearly an adequate number to address the problem. The Pastors want to work with what they have right now and address getting more later.
* The Coalition does not consider the filters a form of relief.

Three churches will get 500 kitchen filters each to distribute to residents of Flint in need. How the pastors determine need is not our problem. Also, the talking point I gave Overton and Harris yesterday on media inquiries about the source of the filters is: 1) the donor wishes to remain anonymous; and 2) the Concerned pastors continues to work with philanthropic, corporate, federal, state and local officials to improve the quality of life for residents in the city of Flint. Now whether they use those talking point is another thing.

Re KWA. It's not what the system can produce, it's what the city wants to purchase, and they are purchasing, to my understanding, 18million gals/day. The KWA will supply to county as well.

The untreated KWA water will be mixed with the Flint River at the treatment facility. Six to eight million gals will be siphoned off from the untreated line to industry...including GM before mixing occurs at the Flint treatment facility. As a result, GM will not get Flint River water. Again this is the discussion, and I will verify the process.

I agree, I think one more meeting with the pastors and maybe the professor from Kettering (who I think is reasonable) to put closure on the outstanding questions is warranted. The other women who were there to argue for the sake of arguing should not be apart of that meeting.

Regarding more state money to Flint or democracy discussions on the question of emergency management isn't something that I have too much of an appetite for.

Best,
Harvey Hollins III, Director
Governor's Office of Urban Initiatives

On Aug 5, 2015, at 9:03 AM, Muchmore, Dennis (GOV) <muchmored@michigan.gov> wrote:

I didn't think that meeting was as useful as others. If people won't accept the factual information, I'm not sure there is much we can do about it. They're getting their own filters, we've installed six at the main and I thought there were six more coming. As for the flushing, that's part of any city's water system, and people in every community pay for it. As to the frequency, there must be a plan to reduce the number of times.

Questions:
Why does KWA only produce 18 million gals? Doesn't make sense to have a system that doesn't produce enough water.
Where do they expect to get the other from? Especially since GM doesn't want the Flint river water (even though presumably GM has been both the biggest commercial user and disposer), how do they separate out the flow?

We can't do too many more of these. The three activists in the room just want to be right, they don't want answers. No matter what we say they'll always want something else to be the answer. The Pastors and the woman form yesterday who usually sits across from me and who always lectures us (that's just a reminder of some of the old time negative racial experiences she's had and I get it) are really a strong group of people. Usually there is a black woman who comes with them, but I missed her yesterday. I really her and of course, Overton and Hill are pretty impressive people in their own right.

We are aware that Virginia Tech researchers are now testing water at various Flint homes for lead levels. We appreciate that Virginia Tech's team is working on this issue because it brings the public spotlight on an important fact: if you have lead water pipes or plumbing fixtures containing lead in your home, or a lead service connection to the city system, it is very likely you are ingesting some level of lead. That's just a fact. It's true whether you live in Detroit, Dowagiac or Decatur.

And in the City of Flint, that fact affects 15,000 or more residences.

However, we want to be very clear that the lead levels being detected in Flint drinking water are not coming from the treatment plant or the city's transmission lines. Treated water leaving the plant has no detectable levels of lead in it. The issue is how, whether, and to what extent the drinking water is interacting with lead plumbing in people's homes.

It does not appear the Virginia Tech research lab is certified, and we can't speak to the sampling methods being employed to achieve these results. The results reported so far fail to track with any of the lead sampling conducted by the city. In addition, the Virginia Tech results are not reflected by the blood lead level testing regularly conducted by the state department of community health that have not shown any change since Flint switched sources.

The state's compliance monitoring program requires the city to use certified laboratories and a standardized, federal testing protocol that looks specifically at the homes in communities most likely to experience lead problems. The latest results from Flint, obtained from two separate rounds of testing over the past year, indicated that Flint drinking water, meets state and federal safe drinking water standards for lead.

That said, the state has requested Flint to 'optimize' its water treatment to further limit exposure to lead from plumbing in homes. While statute allows several years for a drinking water system to actually undertake this process – Detroit took five years to complete its water optimization work – we are encouraging Flint water system operators to take these steps immediately and we are encouraged by the conversation so far.

Any resident who has concerns about lead in their drinking water should have their water tested at a certified laboratory and get professional consultation on how to address it. The leading cause of lead poisoning is known to be lead paint and, in some areas, environmental legacy hot spots where lead is present in soils. However, I will say it again: when homes are fitted with lead plumbing or plumbing fixtures containing lead, homeowners should assume there is some varied level of interaction between water and pipes that results in lead exposure.

Subject: lead in flint water

Brad:
I left a message with Mike Prysby on Tuesday, Sept. 1, but wanted to reach out to you also because of stories we are working on about the extent to which lead is becoming an issue in Flint drinking water.
Today, Sept. 2, researchers at Virginia Tech posted the results on an experiment with Flint water online. The report concludes that Flint River water leaches much more lead from plumbing than does Detroit.
"On average, Detroit water is 12 times (or 12X) less corrosive than the Flint River water currently in use … This is creating a public health threat in some Flint homes that have lead pipe or lead solder," the report says.
An earlier post by the same researchers says that initial water tests show "a serious lead in water problem" in Flint, partly because Flint River water is so corrosive to pipes.
Given the state's role in oversight of the city's drinking water system through DEQ and its overall oversight by state emergency managers during the past several years, I wanted to make sure I'm reaching out to the right person to respond to this information.
Could you let me know who that is?
I expect to post the first story about the experiment today and expect the issue will be getting more attention as the VT study of 300 water test kits from Flint is completed.
Thanks,

Subject: Flint Water Request
Attachments: Flint Mayor Water Request.pdf

Dear Governor,
I am renewing my call for additional funding to address Flint's water challenges. While significant progress has been made, with the fiscal stress and pending lawsuits against the City, there is a gap in the funds necessary to meet the adopted capital improvement plan and to respond to new needs with lead pipes. Attached is a letter of request. I thank you in advance for your willingness to review.

Sincerely,
Mayor Walling

CITY OF FLINT

Dayne Walling
Mayor

September 14, 2015

The Honorable Rick Snyder
Governor, State of Michigan
P.O. Box 30013
Lansing, MI 48909

RE: Call for Additional Support for Flint Water Improvement Plan

Dear Governor Snyder:

On behalf of the Flint community, I am writing with a renewed request for additional support to address Flint's water challenges to ensure that water is affordable and secure for everyone in Flint especially our vulnerable populations. I am asking for an additional $30 million in funds for Flint's infrastructure and a new healthy homes initiative.

Significant progress has been made throughout this year to increase water safety and quality and I thank you for the involvement of your office, the Michigan Department of Environmental Quality, and the Michigan Department of Treasury. A majority of items in the Water Improvement Plan are completed or underway. Most importantly, Flint is now in compliance with the Safe Drinking Water Act due in large part to the installation of the new carbon filter. The infrastructure systems are being made more secure and efficient through the State grants. Now the City is committed to following the recommendation of the Michigan Department of Environmental Quality to optimize the treatment process, reduce corrosion and further minimize risks from lead.

The need to accelerate the City's capital improvement investments remains and has been further increased by the continued financial stress and legal issues. Previously I requested support for replacement or forgiveness of payment to the Drinking Water Revolving Loan Fund due to Flint's status as a distressed community and the gap in funding in the adopted capital improvement plan. I understand that the existing federal law does not allow the existing Drinking Water Revolving Loans that Flint is carrying to be forgiven in retrospect but the need still exists. Flint owes approximately $20 Million. One solution is for the State to grant a new $20 Million that is designed as forgivable from the start. Another solution is to provide

equivalent funding through an expansion of the grant program to Michigan's Financially Distressed Cities, Villages and Townships with a supplemental budget amendment in cooperation with the State Legislature.

The community's heightened concern about lead leeching into the water from old service lines and home plumbing also needs to be addressed. We know that lead is an environmental contaminant and there have been many programs in place over the years to address sources in paint and pipes. Flint needs a new healthy homes initiative specifically focused on lead in water with $10 Million to start the process of replacing service lines for the most vulnerable households. Regardless of the source and treatment of Flint's water, this long term threat of lead in pipes needs to be removed in the interest of public health.

My approach continues to be to work with you and your appointed officials, State Senator Ananich, State Representatives Phelps and Neeley, Congressman Kildee, community groups, businesses, churches, foundations, the Flint City Council, and all of the City of Flint and State and Federal government personnel. We need every available expert and resource to address Flint's water problems.

Flint's safety is my top priority. Just as the City and State have worked together on public safety, we need additional support for fixing the water problems. We need $30 Million in new funds to repair and update the city-wide infrastructure and to assist households in becoming lead-free. The entire Flint community deserves sustainable, safe, secure and affordable water now and into the future. Thank you for the consideration Governor and I look forward to future discussions.

Sincerely,

Dayne Walling
Mayor, City of Flint

CC: Flint City Council President Joshua Freeman; Congressman Dan Kildee; State Senator Jim Ananich; State Representative Sheldon Neeley; State Representative Phil Phelps; EPA Regional Administrator Dr. Susan Hedman; Chief of Staff Dennis Muchmore

CITY OF FLINT

Dayne Walling
Mayor

January 18, 2015

The Honorable Rick Snyder
Governor, State of Michigan
P.O. Box 30013
Lansing, MI 48909

RE: Flint Water Improvement Plan

Dear Governor Snyder:

On behalf of the Flint community, I am writing to convey serious concerns about water quality and to request your support for my proposed Flint Water Improvement Plan. Access to safe and clean water is a basic human right, and, therefore, policy and budget decisions need to ensure that water is affordable and secure for everyone in Flint and all across Michigan it is essential there is City, State and Federal cooperation to address the challenges here and to meet the needs of vulnerable populations.

The Flint Water Improvement Plan is focused in five areas: safety, quality, access, investment and education. The plan puts safety and quality first because this is fundamental. It is designed to be a sustainable solution for the City of Flint and the community as we move towards a new permanent water supply from Lake Huron through the Karegnondi Water Authority. My plan offers new ideas and also builds on successful models of utility, energy and assistance programs at the State and Federal levels.

Safety & Quality

- 100% Safety is the standard
- City of Flint reports testing data to the public to assure safety and expands testing sites and frequency
- Bring on experienced river water treatment operational management in the City of Flint

Access

- Announce an amnesty program for Flint water service turn-ons and reduce the turn-on fee
- Develop a revised affordable payment plan policy to encourage customers to return
- Design Federal and State partnership to establish new Drinking Water Emergency Assistance Fund for the elderly and vulnerable families

Investment

- Accelerate water system improvements outlined in the City of Flint Capital Improvement Plan through Federal and State investments
    - State approves City of Flint's Distressed Cities Fund applications

- Federal and State support for replacement or forgiveness of payment to the Drinking Water Revolving Loan Fund due to Flint's status as a distressed community
- Federal and State grants for infrastructure improvements in alignment with the Flint Master Plan

* City Water Department implements budgeted FY15 projects including leak detection, valve repairs, new pipes and meter replacements

Education

* Develop a community partnership with universities to provide household and business customers with information on testing and conservation
* Ongoing partnership with Michigan Department of Human Services, United Way, Salvation Army and community organizations to provide information and water assistance with the Keep the Water Flowing Fund and support services
* Expand youth energy initiative to assist households with conservation and efficiency (piloted in summer 2014 with Northwestern High School students, EcoWorks and Consumers Energy)

It is also critical to restore the public confidence in Flint Water. The implementation of this plan must be accompanied by extensive community engagement including local elected officials. My objective is to work with you and your appointed officials, State Senator Ananich, State Representatives Phelps and Neeley, Congressman Kildee, community groups, businesses, churches, foundations, the Flint City Council, and all of the City of Flint and government personnel.

It is imperative that we communicate better and provide residents more information. I understand representatives from the Michigan Department of Environmental Quality will be joining a public forum this week at City Hall. This engagement going forward is vital so thank you for supporting their efforts. I think this issue of transparency is important for communities all across the State. I recommend a review of the applicable laws and policies and, at a minimum, a new requirement that water testing data be reported publicly no less than quarterly by law in all Michigan communities in Flint's population category.

Thank you for the consideration Governor. There is nothing more important in Flint right now than fixing the water problems. We must work together to identify funds to repair and update the water treatment facilities and city-wide infrastructure and to help those persons without access to clean water so that the entire Flint community has sustainable, safe, secure and affordable water now and into the future. This is an important issue for the state of our State of Michigan and I urge you to work with us to implement solutions.

Sincerely,

Dayne Walling, Mayor
City of Flint

CC: Flint City Council President Joshua Freeman; Congressman Dan Kildee; State Senator Jim Ananich; State Representative Sheldon Neeley; State Representative Phil Phelps; Flint Emergency Manager Jerry Ambrose

> Wright said construction could start in May.
> State treasury officials still must approve the city council's move because Flint has an emergency financial manager. All expenditures over $50,000 must be approved.
> Genesee County Drain Commissioner Jeff Wright has said that Flint would pay roughly $6.4 million annually for water service if it joined the pipeline – a nearly $4 million savings on what it pays Detroit for water.
> Walling previously said the city would save $19 million over eight years by

getting water from the KWA.
"It's a historic night in the City of Flint," Walling said. "The savings will be less with the capacity level approved by city council because there will be increased treatment cost for the river water."
He said the DEQ told the city it needed to get 18 million gallons per day or there would have to be additional work done at Flint's water plant.
Flint's water plant and the Flint River is currently the backup for Flint and Genesee County, however, the plant only operates four times per year.
Councilman Bryant Nolden was the lone dissenting vote.
"It was a protest vote," Nolden said. "I knew they had enough votes. I just feel like the Flint River is our best option."
Karengnondi is the regional water authority that includes Genesee, Lapeer and Sanilac counties and the cities of Flint and Lapeer.
Flint is the second municipality, behind Genesee County, to officially decide to purchase raw water through the KWA. Lapeer city officials said they intend to purchase water, but an agreement has been finalized.

FLINT, MI – Flint is one step closer to getting its water from Lake Huron as part of the Karegnondi Water Authority.

The vote, **approved 7-1 at the Flint City Council meeting Monday, March 25**, may have set in motion the end to Flint paying to get its water from Detroit.

Under the proposal, Flint would get 16 million gallons per day of raw water from Lake Huron, pipe it to Flint for treatment and then sell it to customers throughout the city. Another 2 million gallons per day would come from the Flint River and will be treated in Flint.

Mayor Dayne Walling said the Department of Environmental Quality must approve Flint's getting 2 million gallons per day from the Flint River.

Tuesday's meeting followed weeks of discussions and special meetings surrounding the resolution.

"We got there," Councilman Joshua Freeman said. "That's the important thing."

There were more than 50 people at Monday's meeting.

"Going with Karegnondi is the best decision. We have no opinion on the economics of the decision," said Rebecca Fedewa, Flint River Watershed Coalition executive director. "If we start drawing water out of the Flint River, we are at risk of having to start releasing water from our reservoirs."

Genesee County Drain Commissioner Jeff Wright said the decision must still be approved by a county water and waste advisory board. The KWA board will then be reconvened for final approval.

Wright said construction could start in May.

State treasury officials still must approve the city council's move because Flint has an emergency financial manager. All expenditures over $50,000 must be approved.

Genesee County Drain Commissioner Jeff Wright has said that Flint would pay roughly $6.4 million annually for water service if it joined the pipeline – a nearly $4 million savings on what it pays Detroit for water.

Walling previously said the **city would save $19 million over eight years** by getting water from the KWA.

"It's a historic night in the City of Flint," Walling said. "The savings will be less with the capacity level approved by city council because there will be increased treatment cost for the river water."

He said the DEQ told the city it needed to get 18 million gallons per day or there would have to be additional work done at Flint's water plant.

Flint's water plant and the Flint River is currently the backup for Flint and Genesee County, however, the plant only operates four times per year.

Councilman Bryant Nolden was the lone dissenting vote.

"It was a protest vote," Nolden said. "I knew they had enough votes. I just feel like the Flint River is our best option."

Karengnondi is the regional water authority that includes Genesee, Lapeer and Sanilac counties and the cities of Flint and Lapeer.

Massive Karegnondi water project moving forward after state OKs pipeline tap into Lake Huron

Jeff Wright

GENESEE COUNTY, MI -- The state has approved a critical permit that allows the Karegnondi Water Authority to tap into Lake Huron with a 1.5-mile underground intake.

But water authority officials are still waiting for Flint to decide if it will be part of it.

Construction on the intake -- estimated to cost $27 million -- might mark the no-turning-back point for the massive project, and county Drain Commissioner Jeff Wright said other developments make it necessary Flint to make a final decision on its involvement in the next few months.

As control of Flint has shifted from mayors and city councils to emergency managers, the city has never committed to buying a minimum volume of water from the KWA.

"The only question at this point really is whether Flint is going to be a partner," said Wright, who has met with emergency financial manager Ed Kurtz and wants to resolve the question before Kurtz leaves his position -- something likely to happen soon after the November election.
"I'd say we have a couple of months here," Wright said of Flint's deadline. He described Kurtz as positive about the city's potential involvement but said, "There's still some questions Flint is working on with Detroit and Lansing."

Kurtz said he can't predict what will happen.

"We're looking at all our options," Kurtz said Friday.
County Commissioner Ted Henry, D-Clayton Twp., said regardless of the city's participation, the pipeline can be built by the remaining partners: Genesee, Sanilac and Lapeer counties and the city of Lapeer.

"The answer is yes," Henry said. "It will be a little different but it can go,"

The drain commissioner said construction of the pipeline intake, which has already been designed, is expected to start this year, after the job is put out for bids and borrowing is authorized by the county Board of Commissioners.

Building the intake will be specialized work, part of which must be done from a barge, and will require building tunnels below the sand bottom of the lake and laying an 84-inch pipe below the surface of the water.

In addition to the state Department of Environmental Quality permit to build the intake, the KWA also needs approval from the U.S. Army Corp of Engineers, Wright said.

A 45-day public comment period on the intake permit has passed and county officials said they expect the permit to be approved within two weeks.

Among other recent developments in the pipeline project:

- The Genesee County Water and Waste Advisory Committee, made up of elected and appointed city, township and village officials, has voted unanimously to set a date for accepting public bids to build the intake.
- The same committee has approved negotiating a contract with Wade Trim to act as program manager for the pipeline project once all necessary permits have been received.
- The county has revised its estimate on the cost of the intake portion of the pipeline from $40 million to $27 million.

Wright said his office is ready to negotiate a contract for Wade Trim to oversee the pipeline work, and said he expects six or seven engineering and surveying companies to assist in getting the job done.

County officials count those jobs among the 1,000 that they say will be created by building the pipeline.

"I want to use local (people) wherever possible and keep the money here," Wright said.

The drain commissioner said the selection of Wade Trim is important to the city of Flint because it signals the start of engineering, which includes decisions about the size of pumps, motors and pipes that will be used to build the pipeline.

Flint officials have options, including the use of Flint River water, or continuing to purchase water from the city of Detroit.

Wright said the only choice for the rest of the county is build the pipeline or sign a 30-year contract with Detroit.

A KWA study claims that continuing to buy water from Detroit will cost the region $2.1 billion during the next 25 years. By building a pipeline, that cost would be $1.9 billion over the same period, the KWA Web site says.

After the initial 25-year period, the cost of water would be less than 25 percent of the projected cost of water form Detroit, according to KWA.

GOVERNOR

NICK A. KHOURI
STATE TREASURER

Flint Water Timeline (09-28-15)

June 26, 2012 – Letter from Flint EM Mike Brown to DWSD for permission to begin blending Flint River water with treated water from DWSD. The letter indicates that the DEQ is supporting this option and its implementation would save the City between $2M and $3M annually.

September 20, 2012 – Letter from Flint EM Ed Kurtz to DWSD requesting written permission to implement the blending option. Approval is requested by October 1, 2012.

October 31, 2012 – Analysis by the Flint Finance Director suggests that the annual cost to purchase water from DWSD will steadily increase to $23M per year by fiscal year 2020.

November 2012 – Treasury retains Tucker, Young, Jackson and Tull (TYJT) to evaluate the KWA proposal to the City of Flint.

November 6, 2012 – Letter from Flint Emergency Manager Ed Kurtz to State Treasurer Dillon that a proposal from DWSD is expected but that the initial assessment is that switching to KWA is in the best interest of the City of Flint.

February 2013 – TYJT issues a final report to Treasury on the comparison between Karegnondi Water Authority (KWA) and DWSD. Analysis suggests that the KWA option is the cheaper option for the City of Flint.

March 2013 – DWSD contacts the City of Flint to begin direct negotiations on a contract extension. Multiple options are provided to the Flint Emergency Manager (EM) Ed Kurtz.

March 26, 2013 – The Flint City Council endorses joining KWA.

April 11, 2013 – State Treasurer Andy Dillon authorizes Flint EM Ed Kurtz, pursuant to Section 12(3) of P.A. 436 of 2012, to enter into a contract with KWA if a final offer from DWSD is either not received for rejected in good faith based upon specific objections.

April 15, 2013 – DWSD provides a best and final offer to the City of Flint. Analyses by Flint EM Ed Kurtz, the Department of Environmental Quality and Treasury's Office of Fiscal Responsibility independently conclude that the KWA option is cheaper for the City of Flint.

April 16, 2013 –Flint EM Ed Kurtz informs the State Treasurer that the City will join KWA. This decision was officially announced May 1, 2013.

April 17, 2013 – DWSD transmits a letter to Flint EM Ed Kurtz terminating service to the City of Flint, effective April 17, 2014.

June 2013 – Groundbreaking for the Karegnondi Water Authority. Flint also requests full time use of the Flint Water Treatment Plant with Flint River water as a source.

June 28, 2013 – Financing Contract between the City of Flint and KWA is approved. Effective September 1, 2013. This document was signed by EM Mike Brown.

February 19, 2014 – The KWA Board of Directors adopts Resolution 2014-01, authorizing KWA to bond for water line construction on-behalf of the City of Flint.

April 17, 2014 – Water service from DWSD officially ends. The City of Flint also conducts two separate public forums regarding the use of Flint River water, upgrades to the City's water system and the overall cost of the switch to KWA.

April 25, 2014 – City conducts public event marking the transition to the use of Flint River water. DEQ information shows that transition complete by May 2015.

March 3, 2015 – Flint EM Jerry Ambrose provides a memorandum to Deputy State Treasurer Wayne Workman stating that a reconnection to DWSD will cost the City $10.1M/year and that water purchases could be as high as $1M/month.

March 12, 2015 – The City of Flint hires Veolia to conduct an operational evaluation of the City's water system.

Subject: Re: Progress Michigan

I don't know what they said so I can't speak to denouncing them. But everyday of inaction compounds the politics of this issue. We have secured around 30 thousand dollars for a filter program from several UAW VPs as well as 50k from GM. We are still waiting on a state emergency professional to help our community react professionally and promptly. The only person I have heard from since Monday's call is Director Wyatt and he has been asking good questions and seems like he recognizes a problem and wants solutions.

I say all that to say, we are happy to quiet critics and we think the best way to do that is progress. I feel like we offered several easy steps last week that would have shown prompt action and none of that has been realized. Further, we have seen DHHS working to discredit the pediatricians in our community rather than work to help the most vulnerable.

I would prefer you and I talk about this daily so we are working together but I have called you and Beth each twice with no return. I know we are all busy but I hope you will agree that more communication during,what we view as a crisis, is the best way to keep us moving forward together.

Subject: info concerning expediting KWA construction

POTENTIAL WAYS THE STATE MIGHT BE ABLE TO HELP KWA EXPEDITE PIPELINE CONSTRUCTION

1. Eliminate frost law restrictions (this would add two months of construction)

2. Additional financing:
   - Contracts have been let

   Reason:
   - Need cash to allow subcontracts
   - Need cash to expedite pipe production
   - Funding can come through mega or warrants to pipe manufacturer or additional rules on DWRF/SRF
   - Funding could come from the roadway funding as direct grants to local road commission to free up funds for pipeline work

3. Act 233 Agencies – State Permit – similar to public schools

   Reason:
   - Projects bigger than local community
   - Public safety of the larger community outweighs local politics
   - Big project – locals not equipped to handle
   - Benefits KWA – GLWA and others

4. State aid to local road commissioners' public right-of-way

   Reason:
   - Project is outside their ability to cope/handle
   - KWA could concentrate on building pipeline; local road commission could concentrate on clean-up

5. a. Clear requirements on road replacement/road repairs and utilities use of right-of-way
   b. No <u>at will</u> permits
   c. RC liable for shut downs for convenience
   d. Public utilities need not get local site plan and/or waivers

Dennis - in response to your earlier email; Wayne's guys came up with a ballpark estimate for reconnecting to DWSD. Let me emphasize 'ballpark'. They used your assumptions & they talked to Natasha H. after 5:00. Bottom line... the estimated cost is approx $10.5mm to reconnect until June '16.
These numbers on their surface seem much improved over previous DWSD $offers. [Is Daddow in the loop on this ?] We need to give some more thought as to whether this is all inclusive. e.g., there might be some costs from turning down operations at the plant

I am being told this can happen in a relatively short time i.e., less than a week. Which seems aggressive. Obviously that does not mean the lead concerns nor discolored water, etc goes away in a week. The pipe section they sold to the county won't be an impediment to this deal.

There apparently are no 'upfront' costs we need to worry about. In theory, it seems like it can be paid over the 9-10 months (vs a lump sum). But I am not clear Dennis on those couple ideas/sources the Mayor & Senator mentioned i.e., at this point I am not sure where the $10.5mm comes from.

My guess is we will keep refining this estimate. Let us know if you need anything else. Again, "credit " Wayne's guys for pulling this together quickly.

To: Saxton, Thomas (Treasury); Koryzno, Edward (Treasury); Byrne, Randall (Treasury)
Subject: RE: follow up

City's usage is 14 MGD/Day

Timeline is 9 months until June 2016

Fixed Cost is $662,100 for 9 months or $5,958,900

Commodity Rate is $501,383/month

Total Monthly Cost is $1,163,483

Cost until June 2016 is $10,471,347

The City does not know the cost to move the water plant into stand-by mode. However, they have indicated that there might be some reduced costs as lower chemical costs will be incurred.

I'm confused by this spreadsheet. At this morning's meeting the supplemental (apart from the filters) discussed was for $6m to reconnect plus $1.5m for 10 FTEs, 8 of which I understood to be in MDHHS for nurse case managers and lead abatement investigators. This spreadsheet seems to be $1.5m short of this morning's conversation. I don't have a funding source for the positions in FY 2016. If we're absorbing within existing resources I'll need a GF transfer and work project to capture FY '15 lapse.

Subject: DRAFT City of Flint Solution
Importance: High

Colleagues,

Please find attached summary of where the State Budget Office believes we are based on this morning's meeting hosted by Director Wyant. This reflects the State commitment of resources towards provision of filters, reconnecting to Detroit Water & Sewage, and home/school/other inspections. Your quick review would be appreciated, since the Governor wants to share with legislative leaders yet today. I have included your budget officers to assist in the review.

Open issues are: (1) where to place the appropriation for the Flint re-connect and (2) whether (and what) boilerplate we may need/want.

Thanks.

Nancy Duncan
Deputy State Budget Director
517-373-0870

Here is the letter from the Genesee Co Drain Commission. My interpretation of the contents would be their estimate is $13.2mm (vs the $12mm discussed this morning).

They included their contract with the City. Sec 5.7 references prevailing rates the City would be charged; that is different than the rates reflected in the $13.2mm. So that contract may need to be modified.

They also raise some other items (under *Procedure to Activate Supply* -- p.3) that may have cost implications.

GENESEE COUNTY DRAIN COMMISSIONER'S OFFICE

JEFFREY WRIGHT
COMMISSIONER

MEMORANDUM

DATE: October 7, 2015

TO: Wayne Workman, Deputy Director, Treasury Department
Randall Byrne, State Administrative Manager

FROM: John F. O'Brien, P.E., Director

SUBJECT: Letter Dated September 30, 2015
Wolfson to Henderson

My staff and I have reviewed the letter referenced above and have prepared this quick memorandum to explain the economics concerns and ramifications of the temporary cessation of the Flint water treatment operations and the return to DWSD/GLWA supply.

This memorandum is broken down into three parts: economics, procedure and concerns.

Economics

Prior to April 2014, Flint held a water contract with DWSD. Flint also had the franchise rights to DWSD water for Genesee County. Therefore, Genesee County received DWSD water via the Flint. The water rate was calculated on that joint demand. In 2013-2014, the allocated cost was $25,303,062 or $738,066 per month plus $13.01 per mcf.

In 2013, DWSD terminated the Flint contract effective April 2014. The Flint chose to go to the Flint River as its source water until KWA water was made available. With the contract terminated, the franchise was terminated and the county had to go to DWSD for water because Flint could no longer supply DWSD water and the Flint River and the Flint water treatment plant does not have the capacity to serve both utilities.

DWSD established a new rate for GCDC that included significant non-contract and non-member charges to access the water. GCDC also acquired approximately 9 miles of water main pipe from the Flint. (The Detroit water meter at the county line between Lapeer and Genesee and the Flint water plant is approximately 11 miles into the county.) The pipeline is of no use to Flint under the Flint River supply or KWA supply scenario. As part of the purchase agreement, language was included for emergency reconnection for Flint to DWSD through this water line.

GCDC water rates with DWSD are as follows:

	Fixed Monthly	Commodity
July 2013 – April 2014 (Flint Contract)	$346,863	$13.01
May 2014 – June 2014	$423,400	$15.18
July 2014 – June 2015	$1,149,400	$3.89
July 2015 – Present	$900,000	$11.86

As you can see, the fixed monthly fees and commodity fees have had significant swings. This is because under the Flint contract, only 40% of revenue was fixed. GCDC went to 80% and are now 60% for the current billing period.

Upon reviewing DWSD's letter of September 2015, DWSD went back to the 2013-2014 rate, added 4% for FY 14-15 and added approximately 11.3% for FY 15-16. This would create a water revenue requirement for a combined Flint/Genesee supply. In Section 1 d) of the letter, they state they would subtract GCDC current payments from that volume, leaving the amount to be paid by Flint. Remember, GCDC is paying the non-contract/non-customer penalty charges.

The reported rate would be $662,100 monthly fixed and $8.93/mcf commodity. Based on 15 million gallons a day and a 30 day month, the monthly charge would be:

$662,100 + 15,000,000 gal x 30 days x 1 mcf / 7,480 gallons x $8.93 / mcf

$662,100 + $537,232.62 = $1,199,332.62 per month

Flint, over the last two seasons, has seen periods of water flow in the 20 to 25 mgd range due to water main breaks. This period has lasted 2 to 3 months. What is the additional cost if the monthly average was 21 mgd?

6,000,000 x 30 / 7,480 x $8.93 / mcf = $214,893.04 per month

The only way for DWSD to provide water to Flint is a common meter at the county line and flow through a county water main. As previously stated, the Flint and GCDC have a contract regarding this potential circumstance (see 5.7 attached).

Assuming the fixed rate by DWSD is correct, the cost with the current commodity would be:

$662,100 + 15,000,000 x 30 / 7,480 x $11.86 = $1,375,602.67

And again, with water main breaks, the additional monthly cost would be $285,401.00.

Paragraph 1 d) of the DWSD letter recognizes this issue in the last sentence: "Depending on how water is provided to the combined GCDC/Flint customer, alternative rate structures may be appropriate."

We can back into that alternate rate based on our knowledge of the DWSD rate structure. DWSD wants 60% of its revenue from fixed rate.

		Volume per month
GCDC fixed	$900,000	49,428 mcf
Flint fixed	$662,100	50,590 mcf
TOTAL	$1,562,100	100,018 mcf

Total commodity required is $1,041,400
Rate based on volume $10.41would be the alternative rate

The adjusted rate for Flint would then be:

50% of fixed rate plus $10.41 per mcf
$781,050 + $15,000,000 + 30 / 7,480 x $10.41 = $1,407,320

And again, at this rate, the water main break situation could add $250,508 per month

Therefore, Flint's expected bill for DWSD supplied water for a nine month period with 2 months of high flow would be $13,166,896.

Procedure to Activate Supply

1. Agreement with DWSD and common rate for joint GCDC/Flint water supply would be required. Agreement needs to include separate billings to Flint and GCDC, Flint to pay directly to DWSD based on meter readings at Baxter and Potter and Station 2 on Flint plant site. GCDC makes no representation to the water quality - that is between Flint and DWSD. The agreement needs a termination transfer protocol for Flint exiting and GCDC remaining.

2. Separate agreement with Flint: back up supply was anticipated on an emergency basis. Nine months to a year of service requires a more detailed agreement. Water outage due to line break and cost to repair, etc. The agreement needs a termination clause if Flint is still on DWSD when GCDC is ready to turn on its water treatment plant in the fall of 2017.

3. The 72-inch line will be required to be reactivated. This will require flushing, pressure testing, and BAC-T sampling.

4. Station 2 meter needs to be calibrated and GCDC will need access to control the valves and read the meters.

5. Flint needs to reactivate the Dort Reservoir.

6. Flint should perform a significant water flush of the distribution system just prior to the switch over.

Flint Distribution System

The TTHM and lead issues here arising due to the water quality at the residential tap: Everyone agrees that the water leaving the water plant is clean, clear, and lead-free. At the residential tap, it has been shown to contain lead, is often brown in color, and has an odor. These are all indications of problems in the distribution system. The distribution system was built for a population of 250,000 people and major industrial use. Current population is below 100,000 and there is limited industrial use.

If Flint does not continue to make improvements/modifications to the distribution system, the problem at the residential tap will continue.

Concerns

Will the lead sampling protocols change based on Flint's switch back to DWSD?

What happens to water treatment plant personnel during this 9-month period? Will they be laid off or carried as an additional expense?

When Flint switches to KWA, will the staff be capable of treating the water or will the learning curve begin again?

What is the Desired Outcome?

It is the understanding of GCDC that all of the current samples that have been compiled at the Flint Water Treatment Plant have all tested within EPA and MDEQ guidelines. The emergency appears to be in the distribution of the water, which includes lead service leads to several residences located throughout Flint and not in the treatment of the water. As the treated water leaving the Flint Water Treatment Plant is within EPA and MDEQ guidelines, GCDC is confused as to what the emergency is at this time or why Flint would need to purchase water from DWSD. *The quality of the water leaving the Flint Water Treatment Plant is as safe to drink as the water that would be transmitted by DWSD to Flint.*

Given the facts as they have been provided to GCDC, if DWSD begins to supply Flint with water via GCDC, the elevated lead levels will not immediately disappear and Flint will be paying an additional million dollars plus a month over what it is currently paying to provide the same clean potable water to its residents. Additionally, by Flint receiving water from DWSD via GCDC, Flint will not be performing corrosion control measures on the DWSD treated water. This is important because once Flint begins to treat the raw water provided by KWA, the lead issue may resurface and continue until the corrosion control measures that will need to be restarted take effect, which GCDC estimates may take up to eight (8) months to establish the necessary film to separate the distribution system from the supply water.

The DWSD letter purposely pits Flint against Genesee County customers by offering a lower rate to Flint than is currently being offered to GCDC. And the delivery point is the same.

These are our quick thoughts on the matter. As time progresses, we will have more time to understand the issues and most likely additional concerns will present themselves.

Should you have any questions, do not hesitate to contact this office at your convenience.

WATER TRANSMISSION MAIN

ACQUISITION AGREEMENT

BY AND BETWEEN

CITY OF FLINT

AND THE

GENESEE COUNTY DRAIN COMMISSIONER AS COUNTY AGENCY

DATED MAY 30, 2014

approval, clearance, waiver, order or authorization of any person, organization, or entity; and (iii) do not conflict with, or result in any breach of, or default or loss of any right under (or an event or circumstance that, with notice or the lapse of time, or both, would result in a default), or the creation of any encumbrance pursuant to, or cause or permit the acceleration prior to maturity of any amounts owing under any indenture, mortgage, deed of trust, lease or other agreement to which the County Agency is a party, which failure, violation, conflict or breach would, in the aggregate, materially hinder or impair the consummation of the transactions contemplated by this Agreement.

5.4 Litigation. As of the Execution Date, there is no action, suit or proceeding pending or threatened against or affecting the County Agency before any governmental entity in which there is a reasonable possibility of an adverse decision which could have a material adverse effect upon the ability of the County Agency to perform its obligations under this Agreement or which in any manner questions the validity of this Agreement.

5.5 Due Diligence and Inspection. The County Agency acknowledges that it is being afforded the opportunity to conduct due diligence and investigation with respect to the transaction contemplated by this Agreement. The County Agency represents and warrants that it has conducted any and all such legal, factual, and other examinations, inquiries, investigations, and inspections, including conducting any tests, studies and examinations, that it, in its sole discretion, has determined necessary to complete such due diligence inspection to determine that the subject matter of this Agreement is suitable for the County Agency's intended use.

5.6 Environmental Matters. The County Agency represents and warrants that it has conducted any and all such legal, factual, and other examinations, inquiries, investigations, and inspections, including conducting any tests, studies and examinations, that it, in its sole discretion, has determined necessary to complete such due diligence inspection to have full knowledge of the environmental condition of the subject matter of this Agreement. County Agency shall enter into this Agreement subject to any and all environmental conditions present upon the subject matter of this Agreement.

5.7 Emergency Water Supply. The County Agency warrants that it will provide, to the extent the Detroit Water and Sewerage Department has available capacity, treated water through the water main that is the subject matter of this Agreement in an emergency situation to Flint until such time as the Karegnondi Water Authority Water Transmission Pipeline construction is completed (which is estimated to be completed by May 2017) and the Karegnondi Water Authority is providing raw water to its customers.

The emergency supply of treated water to the Flint by the County Agency during the construction of the Karegnondi Water Authority Water Transmission Pipeline shall be at the prevailing rate and any additional charges, fees, special charges, and penalties, as billed by the Detroit Water and Sewerage Department to the County Agency.

If Flint shall need an emergency water supply after the Karegnondi Water Authority Water Transmission Pipeline has been installed and is operational, the County Agency will provide, to the extent the County Agency has available capacity, treated water through the water main that is the subject matter of this Agreement in an emergency situation to Flint. The emergency supply of treated water to Flint by the County Agency after the Water

Transmission Pipeline has been installed and is operational, shall be at the prevailing rate and any additional charges, fees, special charges, and penalties, if applicable, as billed by the Detroit Water and Sewerage Department to the County Agency.

ARTICLE 6
COVENANTS OF FLINT

Flint covenants and agrees with the County Agency as follows:

6.1 Operation and Maintenance of the Water Main until Closing. Between the Execution Date of this Agreement and the Effective Date of this Agreement, Flint shall:

a. Operate the Water Main in the ordinary course of business; and

b. Maintain all books and records relating to the operation of the Water Main in the ordinary course of business; and

c. Fix any known breaks or leaks in the Water Main, except those set forth on Exhibit E; and

e. Promptly notify the County Agency of any emergency or other change in the normal course relating to the Water Main (or communications indicating that the same may be contemplated.

6.2 Litigation and Claims. Flint shall promptly inform the County Agency in writing of any Claims of which Flint is or becomes aware that are or might reasonably be expected to become the subject of litigation affecting the Water Main or the transactions contemplated by this Agreement.

6.3 Notice of Changes. Flint shall inform the County Agency in writing if it becomes aware that any representation or warranty made by Flint in this Agreement has ceased to be accurate or if Flint becomes aware of the occurrence of any breach of any covenant or other agreement required by this Agreement to be performed or complied with by Flint.

ARTICLE 7
COVENANTS OF THE COUNTY AGENCY

The County Agency hereby covenants and agrees with Flint as follows:

7.1 Cooperation. Subject to the terms and conditions of this Agreement, the County Agency shall cooperate with Flint to use its best efforts to secure all necessary consents, approvals, authorizations, exemptions and waivers from all persons and entities as shall be requested by Flint or required to be obtained in order to consummate the transactions contemplated hereby.

7.2 Litigation and Claims. The County Agency shall promptly inform Flint in writing of any claims (or communications indicating that the same may be contemplated) of which the County Agency is or becomes aware that are or might reasonably be expected

On Flint, you may want to reach out to Jim Lukaszewski (Luke-ah-sheff-ski) for critical help. I've work a fair bit with him, know him, etc. He could be very helpful on guidance – the issue is getting worse (note Erin Brockovich is now targeting). http://www.e911.com/

The other that I might suggest is Peter Sandman. I've also worked with him – know him, too. He is an outrage management expert. Has a different way of navigating issues and is very well regarded. Different approach than Jim. http://psandman.com/

I think you guys need someone like either/both of these guys to help provide some forest for trees help, messaging help, etc. I don't like the way the issue is being handled, reported, etc. You need some help.

Subject: RE: letter from John O'Brien

I agree with Dennis… Consistent with what I think we (Wayne & I) said at the DEQ meeting yesterday… the county drain commission has more knowledge & experience running a water system than we (Treasury) do. That is why we were trying to get some outside verification. We were not able to get an outside engineering firm engaged due to the timeframe. Our fallback was Jeff Wright – the drain commissioner. He calculated $13.2mm. We did a 'back of the envelope' analysis of $10.5mm late last week. That was based off an email we rec'd from Dennis that summarized the DWSD/City proposal. We were not a part of the $12mm calculation that is in the 'public' realm now. I believe that was a result of a meeting DEQ/Dan had with the City earlier this week.
John indicated yesterday he would recommend/prefer to err on the side of caution for the amount requested from the legislature. Plus, keep in mind whatever number you choose assumes completion of KWA in June. If the project slips a month (& it very well could given it is a major capital project) the cost of the reconnect is going to go up a $1mm+ per month.
If it is possible I would recommend using the $13.2mm (hoping the project will be done as scheduled) given the county is in the best position to make that estimate. We don't have any info that would contradict that number.

Here is the letter from the Genesee Co Drain Commission. My interpretation of the contents would be their estimate is $13.2mm (vs the $12mm discussed this morning).

They included their contract with the City. Sec 5.7 references prevailing rates the City would be charged; that is different than the rates reflected in the $13.2mm. So that contract may need to be modified.

They also raise some other items (under *Procedure to Activate Supply* -- p.3) that may have cost implications.

I agree with Dennis… Consistent with what I think we (Wayne & I) said at the DEQ meeting yesterday… the county drain commission has more knowledge & experience running a water system than we (Treasury) do. That is why we were trying to get some outside verification. We were not able to get an outside engineering firm engaged due to the timeframe. Our fallback was Jeff Wright – the drain commissioner. He calculated $13.2mm. We did a 'back of the envelope' analysis of $10.5mm late last week. That was based off an email we rec'd from Dennis that summarized the DWSD/City proposal. We were not a part of the $12mm calculation that is in the 'public' realm now. I believe that was a result of a meeting DEQ/Dan had with the City earlier this week.
John indicated yesterday he would recommend/prefer to err on the side of caution for the amount requested from the legislature. Re: Increase in average day and maximum peak day by GCDC

Dear Mr. Wolfson:

The Genesee County Drain Commissioner's Office, Division of Water and Waste Services ("GCDC") has been working diligently to fulfill the demands of the various state and federal agencies, Governor Snyder, and the people of the City of Flint ("Flint"), to provide Flint with water from the Detroit Water and Sewerage Department ("DWSD"). These efforts include placing approximately seven (7) miles of the seventy-two inch (72") water transmission pipeline ("Pipeline") that GCDC purchased from Flint back into service, pressurizing the Pipeline, disinfecting the Pipeline, flushing the Pipeline, and performing Bac-T testing on the water inside of the Pipeline. Once these efforts have materialized and GCDC has received two (2) negative Bac-T tests, GCDC will be in a tactical position to furnish DWSD water to Flint as early as midweek.

On October 8, 2015, I sent you a letter after GCDC received a formal request from Flint for GCDC to provide DWSD water to Flint pursuant to a previous written agreement between GCDC and Flint. As of today, I have not received your response. In the October 8, 2015, letter I requested the following:

> GCDC has received a formal request from Flint to receive DWSD water via GCDC per GCDC's contract with Flint. GCDC's rates are currently based on 12 mgd average day and 25 mgd maximum peak day. Does DWSD have the capacity to increase demand to GCDC to 28.5 mgd average day and 51 mgd peak day? If so, could you please provide GCDC with the rates for 28.5 mgd average and 51 mgd peak day through June 30, 2016?

Attorney Anthony Chubb from Flint has provided me with a proposed WATER SERVICE CONTRACT BETWEEN CITY OF DETROIT AND CITY OF FLINT ("Contract"). This Contract makes the assumption that Flint has a separate connection to the DWSD water distribution system. The interconnect between the DWSD water system and the Flint water system is owned by GCDC. Flint does not have a separate connection to the DWSD water distribution system. Any water that Flint receives

from DWSD is required to flow through GN-01. Additionally, GCDC has received no communication from DWSD on this subject since the Flint water issue surfaced. Simply stated, DWSD has the ability to service Flint with water only through the interconnect owned by GCDC.

GCDC is working diligently to move forward with Flint receiving DWSD water; however, GCDC cannot do anything until it has an agreement with DWSD and Flint as to how the DWSD water will be transmitted to Flint. Right now, Flint is requesting GCDC to provide DWSD water GN-01 pursuant to the written agreement between GCDC and Flint. Additionally, Flint has also request DWSD to provide Flint with water with the understanding that DWSD has no way to transmit the water to Flint. There is no question that Flint wants and eventually will be serviced with DWSD water; however, DWSD and Flint cannot continually ignore the fact that GCDC owns and operates the interconnect between DWSD and Flint.

GCDC has been working diligently to assist Flint in receiving DWSD water; however, DWSD to date has been unwilling to provide GCDC the information it needs so that Flint may switch over the DWSD water. When you have prepared your response, please send it to kkilby@mcgrawmorris.com or contact Director John O'Brien at 810-732-7870.

Sincerely,

MCGRAW MORRIS P.C.

Re: Increase in average day and maximum peak day by GCDC

Dear Mr. Wolfson:

GCDC has received a formal request from Flint to receive DWSD water via GCDC per GCDC's contract with Flint. GCDC's rates are currently based on 12 mgd average day and 25 mgd maximum peak day. Does DWSD have the capacity to increase demand to GCDC to 28.5 mgd average day and 51 mgd peak day? If so, could you please provide GCDC with the rates for 28.5 mgd average and 51 mgd peak day through June 30, 2016?

As you are aware, time is of the essence. I would respectfully ask that if at all possible you could provide answers to the above two (2) questions stated above by 5:00 p.m. today. It is anticipated that if DWSD has the capacity and all of the issues between Flint and GCDC are resolved, GCDC anticipates providing Treated Water to Flint within the next seven (7) days.

If you should have any questions or concerns regarding this communication, please feel free to contact me at 810-569-0352 or via email at kkilby@mcgrawmorris.com.

Sincerely,

MCGRAW MORRIS P.C.

Dan has put together an action plan from the DEQ perspective. We have provided contact names for the items on his list that need to be joint DEQ/DHHS. We are potentially adding items to that list but need to work through our plan as we will have to work with local providers, the hospital, health plans, etc. We are doing that today. We are looking at testing, home lead investigations, but NOT remediation. That would still be the responsibility of the homeowner. I would expect that will be the next demand.

I've heard some grumbling around the supplemental. Some members feel it should be a loan, others worry that we are setting a precedent that the state will be asked to pay for similar upgrades in the future. We'll know more quickly on how they are going to react.

Jarrod has scheduled a phone call for tomorrow.

That's what I know.

Water Quality Report
March 12, 2015

FROM
Veolia North America

TO
Emergency Manager Gerald Ambrose

Executive Summary

The City of Flint changed water sources, transitioning from Detroit's system to the Flint River. This change created water treatment challenges that have resulted in water quality violations. Aging cast-iron pipe has compounded the situation, leading to aesthetic issues including taste, odor and discoloration. Public interest and scrutiny of the drinking water system intensified following the distribution of required public notices of violation.

The City of Flint has made a number of good decisions regarding treatment changes that have improved water quality. However, this is a very complex water quality issue and the City is seeking additional advice on what to do to ensure healthful drinking water for the community.

Veolia appreciates the City's decision to seek independent third parties to review current treatment processes, maintenance procedures and actions taken to date, and provide ideas for improvement. We are pleased to present this final report to the City of Flint following our experts' 160-hour assessment of the water treatment plant, distribution system, customer service and communications programs, and capital plans and annual budget.

This report provides recommendations and a roadmap for improvement, though our engagement was limited in scope. Our assessment included reviewing actions taken by the City to date, validating the City's plans going forward, and making recommendations for ideas not being considered.

Although a review of water quality records for the time period under our study indicates compliance with State and Federal water quality regulations, Veolia, as an operator and manager of comparable utilities, recommends a variety of actions to address improvements in water quality and related aesthetics including: operational changes and improvements; changes in water treatment processes, procedures and chemical dosing; adjustments in how current technologies are being used; increased maintenance and capital program activities; increased training; and, an enhanced customer communications program.

We are also providing a recommended schedule and estimated costs for implementing changes. It is our desire to help Flint residents and public officials better understand the current situation so that informed decisions can be made to ensure safe drinking water for the city's customers.

Review of Actions Taken to Date

To address water quality issues, the city has made operational changes, sought help from the State, hired engineering firm Lockwood, Andrews & Newnam, Inc. (LAN) to provide additional advice, and hired Veolia for an assessment from a utility operator's perspective. The City has also reached out to different specialty vendors (chemical suppliers, filter companies and tank aeration companies) for information about products to help with the TTHM issues. These are logical steps to take.

Flint is not alone in dealing with TTHM problems, as many utilities across the country are facing this challenge. The City appears to be following standard steps that many of those communities are taking to successfully correct the problem.

Although the primary focus of this review was based on solving the TTHM problem, the public has also expressed its frustration over discolored and hard water. Those aesthetic issues have understandably increased the level of concern about the safety of the water.

The review of the water quality records during the time of Veolia's study shows the water to be in compliance with State and Federal regulations, and, based on those standards, the water is considered to meet drinking water requirements.

The City has been proactive in its efforts to reach out to the medical community, to set up a phone number and email address to receive complaints, to post State Water Quality reports, to provide the list of EPA required water tests, and offer to test the water at customers' homes.

From our review, these numerous efforts demonstrate how the city is trying to be transparent and responsive beyond what many other communities might do in similar circumstances.

State Report

The Michigan Department of Environmental Quality (MDEQ) has requested specific actions be taken related to the total trihalomethane (TTHM) issues. The February 2015 report from LAN (*Operational Evaluation Report TTHM Formation Concern*) indicated apparent reasons for the elevated levels of TTHM in the distribution system. These generally relate to high Total Organic Carbon (TOC) in the water source, improperly operating equipment both in the plant and the distribution system, less-than-optimal plant TOC removal and old cast-iron pipe in the distribution system. **Our assessment confirms that these reasons are likely given our on-site laboratory testing and analysis, as well as our first-hand observations.**

Due to time constraints, LAN's report to the State was submitted prior to Veolia's final analysis and recommendations, and contained a number of key initial and contingent steps the City should consider, including:

Initial Actions

- Hire a Third Party Water Quality Expert to Complete Independent Audit
- Obtain a THM Analyzer
- Carry Out Jar Testing
- Water Plant Optimization Softening
- Water Plant Optimization Disinfection of Filter Beds (Pre-Chlorination)
- Water Plant Optimization Polymer Aid to Coagulation and Flocculation
- Increase Water Main Flushing
- Water Modeling Cedar Street Pump Recirculation
- Water Modeling West Side Pump Recirculation
- Broken Valve Locations
- Increase Flushing

Contingent Actions

- Fix Ozone System
- Start Feeding Coagulant and Flocculation Polymer
- Convert to Lime and Soda Ash Softening
- Change Disinfection to Chloramine or Chlorine Dioxide Temporarily
- Install Pre-Oxidant at Intake
- Replace Filter Media Implement Advanced Treatment
- Increase Main Flushing
- Continue Valve Replacement
- Emphasize Cast Iron Pipe Replacement

Veolia's Recommendations

While many of Veolia's recommendations match the initial assessment provided by LAN, our approach, as an operator and manager of comparable utilities, considers a more comprehensive solution. These improvements include operational changes, differences in water treatment regimes and chemical dosing, increased maintenance, and increased training.

- **Addition of Permanganate** – The addition of a permanganate chemical will help reduce ozone demand as well as chlorine demand. The reduction of ozone is needed to help eliminate the possibility of violating the bromate limit. The addition of the chemical will require state approval, submission of design documents for approval, procurement of the equipment and installation. The State has indicated they will work with the City on expediting review and approval of any requested changes. The required dosage of permanganate is estimated to range from 0.5 mg/L to 1.2 mg/L with a corresponding price of $160,000 to $320,000 per year. (Please note – The water in the river is dynamic which means it will change with weather, seasons and other factors. The estimates provided are based on bench testing at a given time and as such require the operators to test water and to verify chemical dosages on a frequent basis.)
- **Reduction of Ozone Feed** – Treating water is a delicate balance - increasing ozone to fix the TTHM problem can raise bromate levels to a point of violation. The introduction of permanganate is being recommended to reduce the demand for ozone so that feed rates will not exceed 5 mg/L. The current ozone dosing has been as high as 8 mg/L and, as such, if allowed to continue, will increase the risk of violating the bromate levels.
- **Increase of Ferric Chloride** – Four coagulants were tested by Veolia -ferric chloride, ferric sulfate, polyaluminum chloride (PACl) and aluminum chlorohydrate (ACH). Ferric chloride and ACH were found to be the best choice of product for effectiveness in removing TOC, a precursor to TTHM formation. Current ferric chloride dosages are too low and dosages of 100 mg/L or more are recommended. Again, please note, that the amount of chemical needed changes with the nature of the river and as such, water must be tested multiple times a day with corresponding changes in chemical dosages. This increase to 100 mg/L is twice what is currently being fed and much higher than what had previously been fed last year. The increase in chemical costs could be up to $1,000,000 per year. This change in dosage (using ferric chloride) can be made immediately without state permit review.
- **Reduction of Lime** – Lime is currently being overfed. A higher dosage of lime does not necessarily mean better treatment. A review of different dosages with jar testing indicates that the current dosage of 280 mg/L can be reduced to 230 mg/L. This represents a potential range of savings of up to $270,000 per year. This change can be made immediately. It should be noted that the current softening equipment is in poor condition, which does complicate the treatment process with a poor balance of flow between the two basins, weirs that are not level causing bypassing with the softener basins, and simply old mechanical equipment that periodically breaks down. This equipment is not going to be needed when a change to lake water occurs. Addition of soda ash to help further reduce hardness in cold weather might require dosages up to 40 mg/L with an annual chemical cost up to $320,000. There have also been some questions or complaints from the public regarding hard water. The water entering the plant is currently 360 mg/L and the plant is reducing that level of hardness to about 210 mg/L. Optimization of the dosage can reduce the hardness

further to about 180 mg/L. This reduction however has been sporadic as equipment breakdowns and high flows have caused problems keeping the softening process on-line. As we have noted before, the dosage needs to be adjusted daily or more often based on process control monitoring. The raw water hardness in the summer is much less than in the winter. For illustration purposes, the difference could be 360 mg/L in raw water in winter compared with 220 mg/Lin the summer.

- **Eliminate Pre-Chlorination on the Filters** – The reduction of pre-chlorination on the filters during the summer months can help reduce TTHM formation. This action has to be considered carefully with procedures documented and reviewed for engineering principles. As such, it will take time for the design engineer to determine what could be done to assure the proper chlorine contact time and document that other safety protocols in water are met. This requires state approval. Any submission should be considered along with a possible change in filter media. If Granulated Activated Carbon (GAC) is installed then the pre-chlorination would be stopped or drastically reduced because of the chlorine impact on the GAC filter media. Veolia's initial investigation into changes in chlorine feed point indicate that the recommended action can be accomplished while maintaining the required regulatory contact time for disinfection.
- **Change Filters to Granulated Activated Carbon (GAC)** – The object of the other changes being made is to reduce the TOC before chlorine is added into the process. The plant by design is limited on the amount of TOC removal possible. A maximum removal of only 60% is likely if the plant is properly optimized. The change of filter media to GAC would provide the best reduction possible and provide better than 90% removal dramatically reducing the potential for TTHM formation and thus ensuring compliance with that parameter for the water system. The change in filter media; however, is complicated requiring approval by the state, design of the changes, procurement of the media and a contractor to install it. That will take time and is likely in a range of $1.5 million (more or less) in cost. The use of GAC also requires more testing and monitoring of the media and the TOC than with the current media. GAC will accumulate TOC and begin to become in effective after a period of time. Depending upon the level of TOC reaching the filters this could be as short as 3 months and as long as 9 months. The amount of TOC is dependent upon the river water quality and operation of the other plant processes. Once the ability of the filters to remove TOC is diminished, the GAC media has to be replaced if river water continues as a source. The change to lake water will not require TOC removal and the media could continue to be used as filter media for that new water source.
- **Corrosion Control** – The primary focus of this study was to assure compliance with the TTHM limits. That is not the only problem facing the city and its customers though. Many people are frustrated and naturally concerned by the discoloration of the water with what primarily appears to be iron from the old unlined cast iron pipes. The water system could add a polyphosphate to the water as a way to minimize the amount of discolored water. Polyphosphate addition will not make discolored water issues go away. The system has been experiencing a tremendous number of water line breaks the last two winters. Just last week there were more than 14 in one day. Any break, work on broken valves or hydrant flushing will change the flow of water and potentially cause temporary discoloration.
- **Eliminate a Storage Tank** - The water system has more storage than it requires, due to excess capacity in the water lines in combination with the storage tanks. The City has already employed LAN to update the hydraulic model. The hydraulic model should be used to help determine if water levels can be lowered further and even to remove some storage tanks from service. That decision may need to be made

seasonally. For example demand during water main breaks last week required extensive amounts of water. The excess storage is more a problem with TTHM formation for the system in summer than winter.

- **Prioritize Valve Replacement** - The hydraulic model shows long water age in portions of the system that appear to be contributing to the TTHM problems. LAN has updated the model to include the location of broken valves and that added information is being used to identify other system problems. The City has a contract for valve turning and repair work that should be focused on known broken valves, particularly in sections of the distribution system with old water age. This activity however must wait until warmer weather in fear of causing problems in the water system with lines freezing.
- **Target and Increase Flushing** – Flushing the fire hydrants can be useful in cleaning out lines to minimize discolored water complaints and also helping reduce the age of water. This DOES NOT mean just opening hydrants. The hydraulic model needs to be used to determine which hydrants should be opened and for how long to ensure the lines are properly cleaned. For example, this might require 15 minutes or even several hours of flushing depending on location. The flushing of hydrants also needs to include records of hydrant condition, color of water initially and after periodic increments plus chlorine residual testing. All of that information will help provide information to the engineers on the effectiveness of the procedure. Each crew doing the work should be trained to help explain the process to the public and also warn neighborhoods about flushing so that staining of laundry can be avoided.
- **Change to Lake Water** – The changes being made now to the water plant will not be the same changes required to treat lake water once it becomes available. A thorough analysis and plan needs to be made in preparation of that switch. This is going to need to include changes in how the plant is operated, like eliminating lime softening and reducing the dosages of many chemicals. Consideration will also have to be given to algae treatment when lake water is being used.
- **Operating Programs** – All of the changes discussed above are based on testing and techniques proposed by engineers and skilled operators of both LAN and Veolia. The staff will need further training and implementation of detailed protocols to successfully implement the changes and to ensure long-term success at the plant. This means the City needs to implement a series of programs to ensure success in these changes.
    - **Process Control Management Plan** (PCMP) – The amount of testing and resulting changes in chemical dosages, along with monitoring the impact on the water, will require a well-documented process that all operators follow. An example of this is jar testing, which is used by the operators to identify the most effective chemicals and dosages to optimize treatment. The staff understands the basic treatment process but needs further practice and training to become proficient in the use of routine process control to adjust for water quality. This is commonly referred to as a PCMP and is used as a standard operating procedure so that the operators on the day shift can communicate with the night shift, that operators are following the same treatment plan for water, that the adjustments are unified between different shifts and different people, that a desired water treatment quality is defined and variations from it signal alarms and that the staff knows what to do when the water quality setpoints begin to drift away from its desired quality levels.
    - **Lab QA/QC** – The operation of the water plant is dependent upon accurate lab results. Standard operating procedure needs to be set and lab technicians trained in that process. EPA and the State

set procedures and standards to be met and the staff should strive to meet those standards. The City has already purchased a TTHM analyzer but should also consider a TOC analyzer that can be an online continuous device to provide immediate information on influent and effluent levels of TOC. Part of the lab records should be historical review of data to help operators better understand the changes they make in the plant.

- **Maintenance Management** – The key to water equipment is having all the equipment effectively maintained and functioning properly. The current capital program is fixing many broken pieces of equipment and updating the plant to current standards. This however must be followed with a rigorous maintenance program that ensures the proper preventive maintenance, is able to predict when maintenance is needed to keep equipment functioning properly and responsive to changes in flows and source water quality.
- **Training** – The changes being suggested are new to the staff and as such training needs to be provided in what the changes involve, why they are being made, the impact on the water quality, and how best to run the plant. A good demonstration of skill level is for the staff to become certified by the State as a licensed water plant operator. Many utilities now require all operators to hold at least the minimum certification level as a starting point and offer incentives to increase their certification level.

- **Communication Program** – The city should lay out an immediate, written strategy for communicating with the public in the short-term, as well as a 6-to-12 month strategy that contemplates known, future events like the KWA pipeline and switch to lake water. A wide range of activities are underway to work with the public but a comprehensive and coordinated effort, with a strategic focus, will help the utility and its customers.
  - **Dedicated Communications Personnel** – The City has a single, dedicated public information officer, tasked with providing service to all of city government. The current focus on communications support for Public Works, and the anticipated needs over the next several years, indicate the city would benefit from the hiring of a staff person in Public Works who could establish a communications program designed to provide clear and concise information to a broad audience though a number of different channels. In the interim, the city could hire a communications intern, local communications firm, or somebody with experience who is able to provide reduced or no-cost services for the immediate future.
  - **Communications Planning – Public Notification** – The City should be congratulated on its efforts to keep the public informed. It is posting its monthly reports on the web page to provide transparency, though these reports are highly technical – and may be too technical for the customer base at large. They are valuable to those customers who do want this level of detail. The city should create a single-page dashboard of information that outlines the water utility's performance for the previous month, post the dashboard on the website, print copies for distribution at customer service or other reception areas, and be provided during speaking engagements or other events. This dashboard should be easy to understand, and include:
    - The number of water quality tests conducted the previous month
    - The number of violations reported

- Whether these results are in or out of compliance
- Information about other proactive measures such as main and hydrant replacements, or other programs to improve performance of the water utility
- Benchmarking information so the reader has a greater understanding of how Flint compares with other similar utilities in the region and across the country

- **Public Meetings** –There should be additional, proactive coordination with neighborhood, community and civic groups to provide speakers on timely topics. Given the list of numerous responsibilities, the Public Works director cannot do it alone – the city should identify three or four other staff members, knowledgeable about the water utility who can also speak to various groups, provide information and answer questions. The development of an outreach strategy to target key neighborhood, community and civic groups also will advance the communications effort and the dissemination of information in both the short and long term.
- **Standard tools** – Work crews in the field are often the faces of the utility – the city should create standardized tools for communicating with the public that can be easily and quickly delivered to the community in the event of main breaks, flushing or pre-planned capital improvements. Tools should include:
  - Door hangers for individual distribution
  - Yard signs with simple messaging to be placed near work-sites
  - A simple tri-fold brochure with useful information about the utility and appropriate contact information
  - Specific flyers about a range of topics
  - Infographics about how the water system works, from the intake to the customer's site
- **Change in Billing Format** – The City currently has no real way to reach all customers on a regular basis and provide information. The city should consider changing from a billing postcard to using an envelope and bill stuffer. Monthly or bi-monthly bill inserts are typically used to provide educational material for customers and are standard ways to provide information. Understandably, budget considerations must be taken into account.
- **Use Public Affairs Programming and Opportunities** – The news media has been covering this topic quite extensively – there are other media-related opportunities that may reach a wider audience. Taking advantage of these opportunities will help the city relay information to its customers and the community.
  - Participate in regular editorial-board meetings to provide background information and updates on key milestones or events.
  - Identify a local weekly television program and offer to provide guests to speak about key milestones or upcoming events.

Conclusions and Next Steps

The focus of this report is to help assure TTHM compliance and then improve general water quality. The City had good results in its most recent TTHM tests, although that is to be expected with the changes made to date and the cooler weather which contributes to low TTHM formation. Warm weather will be a different situation both in the nature of the Flint River water quality and in the formation of TTHM. With those changes coming, the City needs to act quickly to make improvements before additional testing takes place this spring and summer. The summary below provides the recommended actions, a priority for their implementation and projected costs either operational or capital. The costs are rough orders of magnitude and will vary with changes in water quality, operational decisions, and engineering choices being made and in some cases require State approval. Although a priority is assigned many of these actions can take place simultaneously.

Priority	Action	Annual Operational Cost	One Time Capital Cost
1	Implement operating programs for process control, lab QA/QC, maintenance, and training. These programs are needed regardless of the TTHM issue and will help with transition to lake water. The City has decided upon a central maintenance software and the water system should be the first to utilize this program since costs are already budgeted. These programs should be initiated immediately.	$ 25,000	$ 250,000 - $ 350,000
2	Contract with your engineer and initiate discussions with the State on the reduction of chlorine prior to the filters and changing the filter media to GAC. This activity has the longest time frame for design and approval, but also is extremely critical to assuring reduced TTHM production. The current filter cleaning and maintenance project needs to be adjusted to take into consideration the change in filter media both to dispose of the anthracite instead of cleaning and to install the GAC. This entire project needs to be done by early July to assure a flow of water throughout the system. Several months are required for the engineering design, State approval, bidding of work and installation of GAC and as such needs to begin now.	$ 0	$1,500,000
	Contract with your engineer and initiate discussions with the State on the addition of 0.5 to 1.2 mg/L of either potassium permanganate (dry) or sodium permanganate (liquid). This will take time to get approved and to implement. The use of liquid tanks at the raw water pump station may be the quickest and least expensive alternative for a temporary measure.	$ 160,000 - $ 320,000	$ 50,000

	Contract with your engineer and initiate discussions with the State on the addition of a corrosion control chemical. This action can be submitted and discussed with the state at the same time as the other chemical and filter changes saving time and effort. A target dosage of 0.5 mg/L phosphate is suggested for improved corrosion control.	$ 50,000	$ 50,000
3	Increase the ferric chloride dosage to 100 mg/L depending on river water TOC levels. (Lower TOC levels can be treated with less ferric chloride.) This change can be made now and is allowed by the State.	$ 1,000,000	$ 0
	Reduce the ozone feed rate to 5 mg/. This change can be done now and does not require State approval.	($50,000 – $100,000	$ 0
	Reduce the lime dosage to minimize hardness levels after softening. This will eliminate magnesium removal during treatment, but will also reduce total hardness. A reduction in carbon dioxide dosing for recarbonation treatment also is expected due to the reduction in lime feed. This change can be made now and does not require State approval.	($270,000)	$ 0
4	Confirm with the engineer when the revised hydraulic model will be completed and if necessary for time to focus on areas of longest water age if that would speed up the effort. Identify impact of reducing tank levels or eliminating a tank seasonally to improve water age. Include with this effort a list of hydrants to flush along with time required to assure drawing fresh water through the system. The engineer has been assigned this task already and confirmation of the timing of a delivery is needed.	$ 0	Already Contracted
	Ask the engineer to identify closed valves on a map that are impacting water age and that can be bid for replacement as soon as weather permits. Have the engineer identify areas of the system where the valve contractor should be focused on finding and fixing closed valves.	$ 0	Already Budgeted
5	Implement the recommendations in the communications program including a person assigned to public works education, using envelopes instead of cards along with bill stuffers for education and provide training for staff. Envelopes and bill stuffers are expensive and might be done periodically and not every month. The cost of TTHM notices, Annual Water Quality Reports and City notices should be figured into if any additional costs would exist. Many of these changes are underway now by the City.	Position Being Budgeted	

Notes

- The costs provided are rough order of magnitude which final engineering will firm up but will fluctuate with final decisions on engineering, operating technique and water quality.
- The change from river to lake water will dramatically cut the chemical costs as less is needed once the change occurs. This means that potassium permanganate will likely not be needed, ferric will drop as much as it went up, ozone levels will be lower and little lime will be needed.

Results Expected

The real question is what changes can be expected from these results in lowering the TTHM, improving the aesthetics and preparing for the change to lake water.

- **TTHM** – The City has already made great strides in reducing the TTHM levels with the changes already made. The additional suggestions by Veolia will further reduce TTHM in the water and help get the city released from the notices being provided to customers.
- **Hardness** – The hardness entering the plant this winter is 360 mg/L with the current system reducing it to 210 mg/L and optimization will reduce to about 180 mg/L. During the summer the levels will be lower probably in the 140 mg/L to 150 mg/L range. The target set by the current best operating practices is 120 mg/L to 150 mg/L.
- **Discolored Water** – The discolored water is caused by the old unlined cast iron pipe. The water from the plant can have an impact on discolored water, but a greater concern is the breaks and construction work that disrupt the flow of water causing discoloration. A polyphosphate is suggested to help bind the old cast iron pipe reducing instances of discolored water. This along with improve flow of water and programmed hydrant flushing will help, BUT WILL NOT eliminate discolored water occurrences.
- **Change to Lake Water** – The recommendations include the suggestion of programs to help the staff better manage the treatment process, additional testing to adjust the plant and additional lab monitoring, a maintenance program focused on keeping equipment properly functioning and more training for staff to improve their skill level. Those actions will prepare the staff for the change of water sources when it comes next year in addition to developing a thorough plan for the switch.

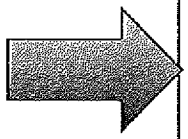
VEOLIA
City of Flint, MI
City Council Public Works Committee
Interim Water Quality Report

Veolia Scope of Work

Week 1

- Provide a review of current actions
- Engage staff, visit facilities and analyze data
- Make interim report



Week 2

- Carry out more detailed study of initial findings
- Make recommendations for Improving water quality
- Provide a plan, cost and schedule for change

Items of Note

- **Not in scope** – studying why the change from DWSD or the history of the utility
- **What we found** – A very frustrated community and a staff trying to solve the problem, having some success but frustrated with the pace of change

Everybody Is Checking the Safety of Water

- City, state, news media, universities and other groups
- Safe = compliance with state and federal standards and required testing
  - *Latest tests show water is in compliance with drinking water standards*
  - *Monthly report available on web page*
- More than 20,000 tests required annually for city
- Strict testing requirements in place (what and how to test)

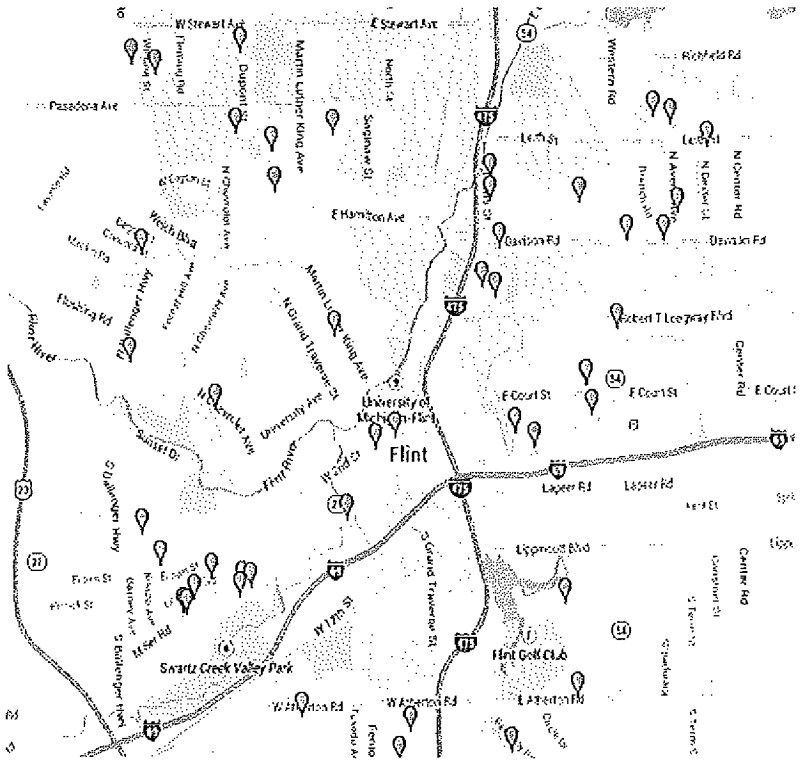
Why TTHM Notices?

- TTHM is formed as a result of the reaction between chlorine and organic material in the water
- City is required to test quarterly at 8 sites
  - *Last summer, several sites had more TTHM than allowed*
- City has reduced levels of TTHM and now all sites are in compliance
  - *Customer notification letters are required until tests are in compliance an average of four quarters*
- It will take at least 2 more quarters to lower average
  - *Even a change to DWSD water doesn't solve problem*
- Flint is not alone – hundreds of communities are facing TTHM issues

Why Discolored Water?

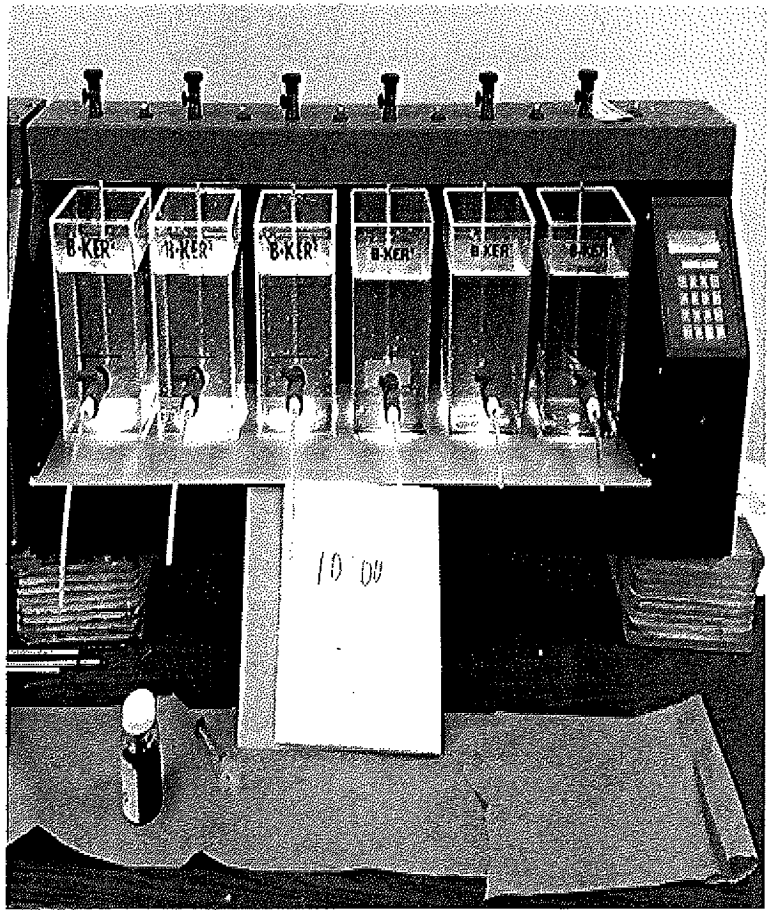
- Old cast iron pipes
- Always has been some discolored water problems – mostly after water breaks
- Efforts to reducing TTHM didn't help discoloration
  - *Doesn't mean the water is unsafe but it is not appealing and raises questions*
- City will test the water at your home – call 787-6537 or email flintwater@cityofflint.com
- Tracking customer complaints is important

Location of water quality complaints
The last 12 months – fewer than you think



Water Quality Can Be Improved

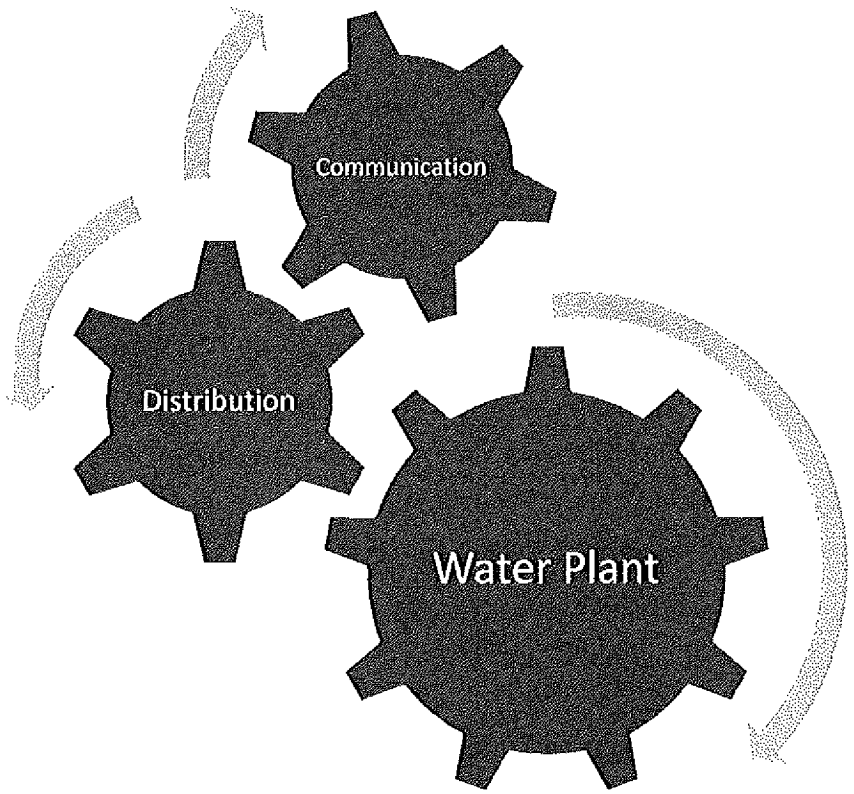
- Adjust the chemicals being fed – stop some, increase some and change some
- Provide better monitoring of water quality to help make adjustments
- Continue repair or replacement of broken parts
- Reduce the over capacity of the distribution system
- Do a better job explaining what is happening
- Do a better job of asking for help



VEOLIA

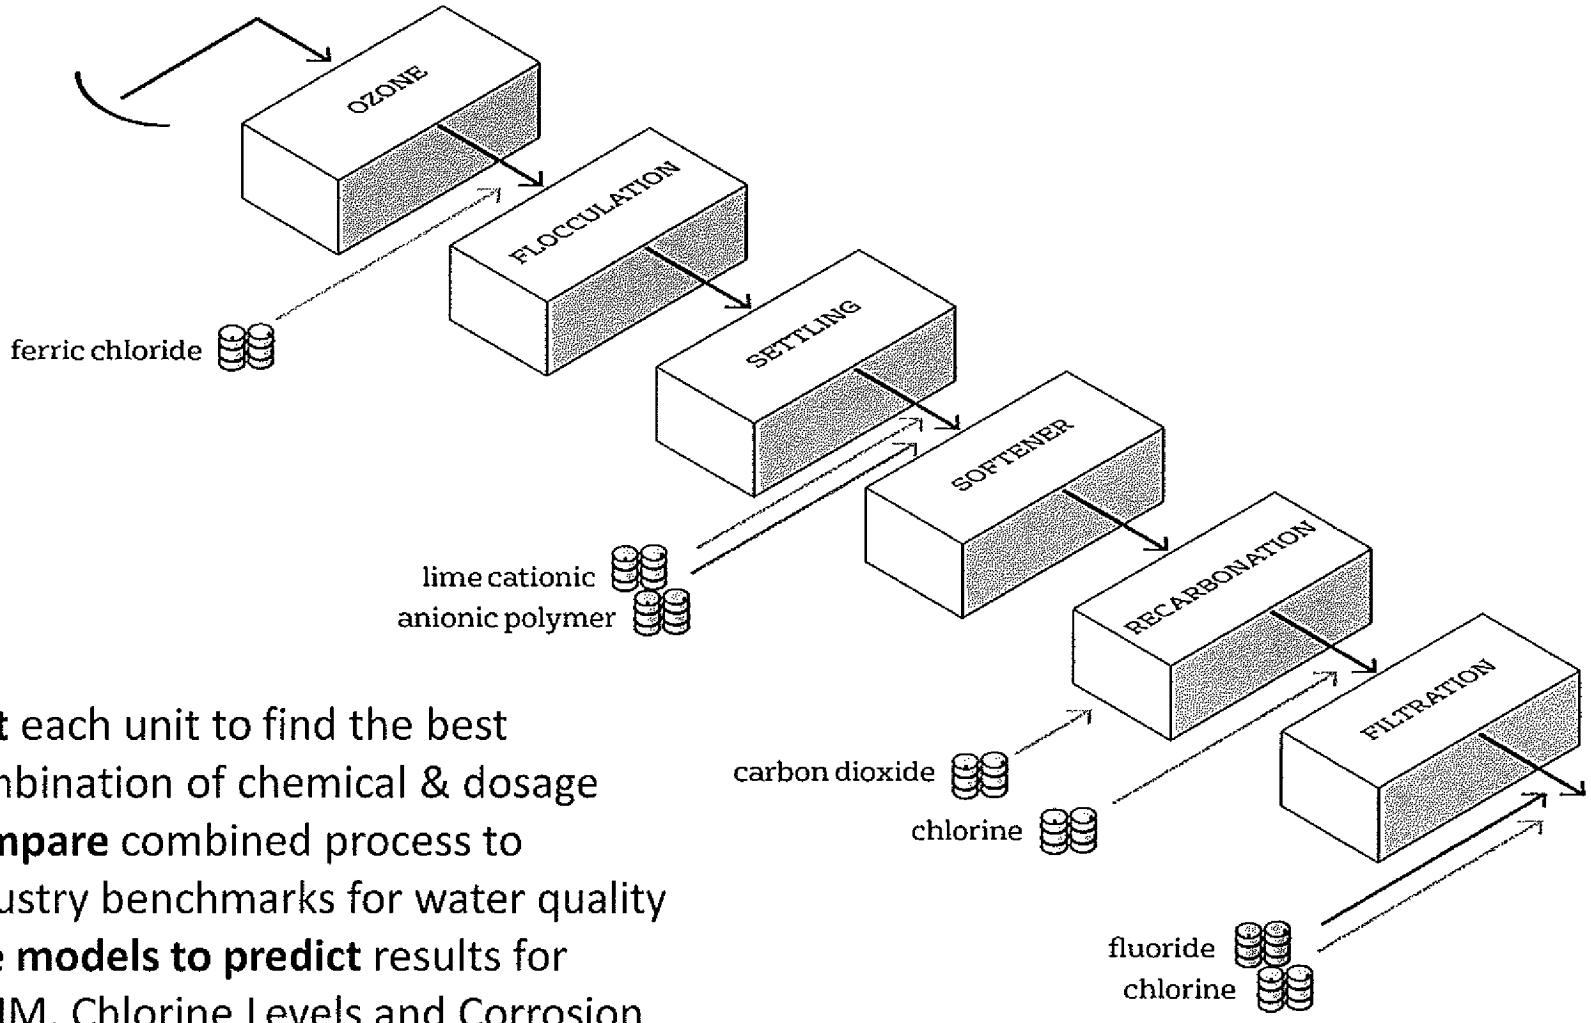
Further Explanation of Solutions

Solution Involves Coordination of 3 Activities



- Water plant improvements
  - *Optimize chemical dosages*
  - *Consider different chemicals*
  - *Change dosing points*
  - *Install granulated activated carbon*
  - *Complete plant upgrades*
  - *Implement best mgt practices*
- Distribution system improvements
  - *Fix broken valves*
  - *Ask for customer feedback*
  - *Reduce tank storage*
  - *Target line flushing*
  - *Run a hydraulic model*
- Better communication with customers
  - *Engage advisory committees*
  - *More accessible utility*
  - *Make it easy to access information*
  - *Better customer communication*

Optimize Plant Processes



- **Test** each unit to find the best combination of chemical & dosage
- **Compare** combined process to industry benchmarks for water quality
- **Use models to predict** results for TTHM, Chlorine Levels and Corrosion

Complete Plant Construction & Re Prioritize Capital

Cost effective plan in budget

- Complete water plant renovation
  - *Target SCADA and instrumentation in plant*
- Speed up valve turning contract & provide money for replacements
- Speed up hydraulic model update to reduce tank volume
- Evaluate installing of granulated activated carbon on filters

Weather can impact timing

Digging up a water valve for repair
Need good weather to start

Implement Best Management Practices

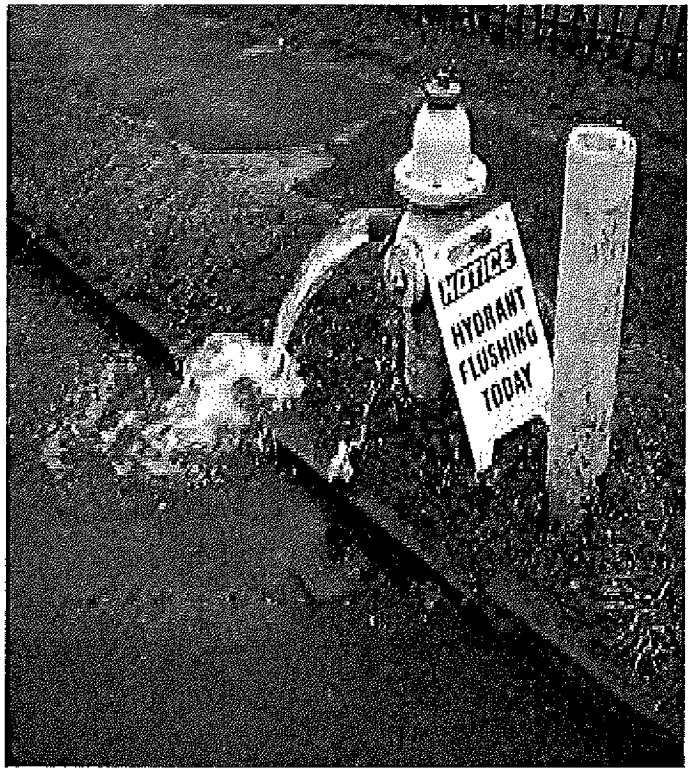
<u>Activities to Help Operators Maintain Good Water Quality</u>

- Process Control Management Plan
- Lab QA/QC Program
- Computerized Maintenance Management System
- Asset Management System
- Training and Certification Program
- Vulnerability Plan

Distribution System Improvements

- Speed up flow of water from plant to homes – 2 weeks plant to house
  - *Find closed valves & open them*
  - *Replace broken valves*
  - *Update hydraulic model*
  - *Reduce system storage*
- Track customer complaints
  - *Test customer water*
  - *Spot flush hydrants to clean areas of stagnant water in the system*

Flushing out discolored water



VEOLIA

Improving Customer Service

Make It Easy to Access Information and People

Develop a proactive customer communication plan

- Create advisory committees to help direct efforts and improve flow of information
- Establish a single point of contact to manage all water quality complaints
- Provide additional customer service training to staff
- Expand neighborhood and community outreach
- Change monthly billing statements from card to envelope with information

Example - Communicate in the field

NOTICE: ANNUAL FLUSHING PROGRAM

We are conducting our annual flushing program to enhance your water quality and clean the distribution system.

DC Water crews will be flushing hydrants in your area 10:00 p.m. to 6:30 a.m. on the following dates:

9/24 **through** 9/30

IMPORTANT INFORMATION

- Your water supply will not be shut off during hydrant flushing.
- You may notice slight water discoloration or low water pressure.
- During this time, customers can continue normal water usage, including drinking, bathing and laundry (unless water is discolored).

If you experience discolored water during this period:

- Run your cold water taps for 15 minutes. If it does not clear up, please contact our Drinking Water Division.
- Do not run your hot water. If you experience discolored water from your hot water tap for several hours, then it is recommended to drain and flush your water heater tank.

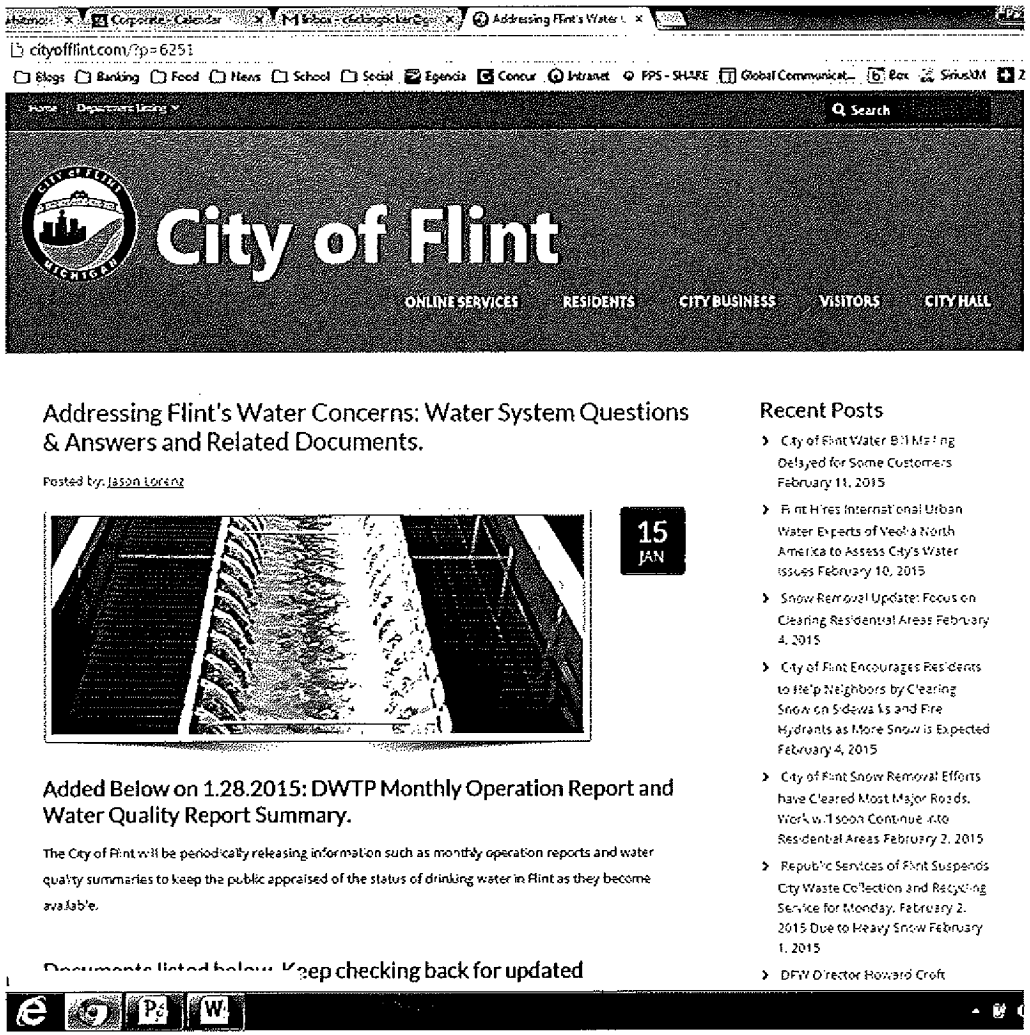
Provide field crews with additional communications tools to use to address questions or concerns from the public

Create door hangers, flyers, or yard signs to notify neighborhoods about main breaks, hydrant flushing, or system maintenance that may affect the public

Create a business card or other contact card with the name and phone number of the single point of contact with the Department of Public Works who is managing information flow

****sample door hanger provided by DC Water & Sewer Authority***

Clear, concise information is key



- **Simplify the reports on the web page dedicated to addressing water system questions**
  - ***Create a single-page, easy to understand report for the public***
  - ***Use charts or provide other examples to demonstrate water quality testing and system or treatment plant improvements underway***
  - ***Provide name, phone number and email address for identified point of contact so customers can request more information***
  - ***Continue to provide Monthly Operation Report and Water Quality Report Summary for those customers interested in more technical information***
  - ***Use site to provide additional notice of field work that may impact customers***

VEOLIA

What Is Next

Next Steps

Week 1

- Provide a review of current actions
- Engage staff, visit facilities and analyze data
- Make interim report

Week 2

- Carry out more detailed study of initial findings
- Make recommendations for Improving water quality
- Provide a plan, cost and schedule for change

Questions Being Heard

REMEMBER

We just started. Might not have an answer yet to your question

- **When will water improve -** The water has improved with current actions. More changes will occur over weeks and months because of safety reviews
- **Date of next update and final report** – An update will be provided next week and a report the following week.
- **Time frame for implementing recommendations –** The City is already started. Others a few days and some weeks or months due to State approval being required or weather.
- **Cost of changes** – Don't know yet but we are aware of the financial concerns

More Questions Being Heard

- **How are TTHM formed –** It's the reaction of chlorine to organics (leafs, dirt) in the water.
- **How to reduce TTHM –** Reduce organics before introducing chlorine and shorten time chlorine has to react with the organics
- **What causes discoloration –** Older lines, the iron parts of the system will leach iron into the water causing the discoloration. Other times its just air built up.
- **Why no discoloration with DWSD –** There was. Flint had a bad time with breaks of old line and is doing lots of construction. This stirred up the water and caused discoloration.

More Questions Being Heard

- **Can you test my water** – The city will test your water for free. But, only 2 of 20 people have taken the city up on the offer since it began offering the service.
- **Medical problems** – Some people may be sensitive to any water. Talk to your doctor. The City is communicating with the medical community.
- **Confidence that future problems will be avoided** – Recommendations will include putting programs in place to better respond to water changes and assure quality

VEOLIA

Water Quality Report
March 12, 2015

FROM
Veolia North America

TO
Emergency Manager Gerald Ambrose

Executive Summary

The City of Flint changed water sources, transitioning from Detroit's system to the Flint River. This change created water treatment challenges that have resulted in water quality violations. Aging cast-iron pipe has compounded the situation, leading to aesthetic issues including taste, odor and discoloration. Public interest and scrutiny of the drinking water system intensified following the distribution of required public notices of violation.

The City of Flint has made a number of good decisions regarding treatment changes that have improved water quality. However, this is a very complex water quality issue and the City is seeking additional advice on what to do to ensure healthful drinking water for the community.

Veolia appreciates the City's decision to seek independent third parties to review current treatment processes, maintenance procedures and actions taken to date, and provide ideas for improvement. We are pleased to present this final report to the City of Flint following our experts' 160-hour assessment of the water treatment plant, distribution system, customer service and communications programs, and capital plans and annual budget.

This report provides recommendations and a roadmap for improvement, though our engagement was limited in scope. Our assessment included reviewing actions taken by the City to date, validating the City's plans going forward, and making recommendations for ideas not being considered.

Although a review of water quality records for the time period under our study indicates compliance with State and Federal water quality regulations, Veolia, as an operator and manager of comparable utilities, recommends a variety of actions to address improvements in water quality and related aesthetics including: operational changes and improvements; changes in water treatment processes, procedures and chemical dosing; adjustments in how current technologies are being used; increased maintenance and capital program activities; increased training; and, an enhanced customer communications program.

We are also providing a recommended schedule and estimated costs for implementing changes. It is our desire to help Flint residents and public officials better understand the current situation so that informed decisions can be made to ensure safe drinking water for the city's customers.

Review of Actions Taken to Date

To address water quality issues, the city has made operational changes, sought help from the State, hired engineering firm Lockwood, Andrews & Newnam, Inc. (LAN) to provide additional advice, and hired Veolia for an assessment from a utility operator's perspective. The City has also reached out to different specialty vendors (chemical suppliers, filter companies and tank aeration companies) for information about products to help with the TTHM issues. These are logical steps to take.

Flint is not alone in dealing with TTHM problems, as many utilities across the country are facing this challenge. The City appears to be following standard steps that many of those communities are taking to successfully correct the problem.

Although the primary focus of this review was based on solving the TTHM problem, the public has also expressed its frustration over discolored and hard water. Those aesthetic issues have understandably increased the level of concern about the safety of the water.

The review of the water quality records during the time of Veolia's study shows the water to be in compliance with State and Federal regulations, and, based on those standards, the water is considered to meet drinking water requirements.

The City has been proactive in its efforts to reach out to the medical community, to set up a phone number and email address to receive complaints, to post State Water Quality reports, to provide the list of EPA required water tests, and offer to test the water at customers' homes.

From our review, these numerous efforts demonstrate how the city is trying to be transparent and responsive beyond what many other communities might do in similar circumstances.

State Report

The Michigan Department of Environmental Quality (MDEQ) has requested specific actions be taken related to the total trihalomethane (TTHM) issues. The February 2015 report from LAN (*Operational Evaluation Report TTHM Formation Concern*) indicated apparent reasons for the elevated levels of TTHM in the distribution system. These generally relate to high Total Organic Carbon (TOC) in the water source, improperly operating equipment both in the plant and the distribution system, less-than-optimal plant TOC removal and old cast-iron pipe in the distribution system. **Our assessment confirms that these reasons are likely given our on-site laboratory testing and analysis, as well as our first-hand observations.**

Due to time constraints, LAN's report to the State was submitted prior to Veolia's final analysis and recommendations, and contained a number of key initial and contingent steps the City should consider, including:

Initial Actions

- Hire a Third Party Water Quality Expert to Complete Independent Audit
- Obtain a THM Analyzer
- Carry Out Jar Testing
- Water Plant Optimization Softening
- Water Plant Optimization Disinfection of Filter Beds (Pre-Chlorination)
- Water Plant Optimization Polymer Aid to Coagulation and Flocculation
- Increase Water Main Flushing
- Water Modeling Cedar Street Pump Recirculation
- Water Modeling West Side Pump Recirculation
- Broken Valve Locations
- Increase Flushing

Contingent Actions

- Fix Ozone System
- Start Feeding Coagulant and Flocculation Polymer
- Convert to Lime and Soda Ash Softening
- Change Disinfection to Chloramine or Chlorine Dioxide Temporarily
- Install Pre-Oxidant at Intake
- Replace Filter Media Implement Advanced Treatment
- Increase Main Flushing
- Continue Valve Replacement
- Emphasize Cast Iron Pipe Replacement

Veolia's Recommendations

While many of Veolia's recommendations match the initial assessment provided by LAN, our approach, as an operator and manager of comparable utilities, considers a more comprehensive solution. These improvements include operational changes, differences in water treatment regimes and chemical dosing, increased maintenance, and increased training.

- **Addition of Permanganate** – The addition of a permanganate chemical will help reduce ozone demand as well as chlorine demand. The reduction of ozone is needed to help eliminate the possibility of violating the bromate limit. The addition of the chemical will require state approval, submission of design documents for approval, procurement of the equipment and installation. The State has indicated they will work with the City on expediting review and approval of any requested changes. The required dosage of permanganate is estimated to range from 0.5 mg/L to 1.2 mg/L with a corresponding price of $160,000 to $320,000 per year. (Please note – The water in the river is dynamic which means it will change with weather, seasons and other factors. The estimates provided are based on bench testing at a given time and as such require the operators to test water and to verify chemical dosages on a frequent basis.)
- **Reduction of Ozone Feed** – Treating water is a delicate balance - increasing ozone to fix the TTHM problem can raise bromate levels to a point of violation. The introduction of permanganate is being recommended to reduce the demand for ozone so that feed rates will not exceed 5 mg/L. The current ozone dosing has been as high as 8 mg/L and, as such, if allowed to continue, will increase the risk of violating the bromate levels.
- **Increase of Ferric Chloride** – Four coagulants were tested by Veolia -ferric chloride, ferric sulfate, polyaluminum chloride (PACl) and aluminum chlorohydrate (ACH). Ferric chloride and ACH were found to be the best choice of product for effectiveness in removing TOC, a precursor to TTHM formation. Current ferric chloride dosages are too low and dosages of 100 mg/L or more are recommended. Again, please note, that the amount of chemical needed changes with the nature of the river and as such, water must be tested multiple times a day with corresponding changes in chemical dosages. This increase to 100 mg/L is twice what is currently being fed and much higher than what had previously been fed last year. The increase in chemical costs could be up to $1,000,000 per year. This change in dosage (using ferric chloride) can be made immediately without state permit review.
- **Reduction of Lime** – Lime is currently being overfed. A higher dosage of lime does not necessarily mean better treatment. A review of different dosages with jar testing indicates that the current dosage of 280 mg/L can be reduced to 230 mg/L. This represents a potential range of savings of up to $270,000 per year. This change can be made immediately. It should be noted that the current softening equipment is in poor condition, which does complicate the treatment process with a poor balance of flow between the two basins, weirs that are not level causing bypassing with the softener basins, and simply old mechanical equipment that periodically breaks down. This equipment is not going to be needed when a change to lake water occurs. Addition of soda ash to help further reduce hardness in cold weather might require dosages up to 40 mg/L with an annual chemical cost up to $320,000. There have also been some questions or complaints from the public regarding hard water. The water entering the plant is currently 360 mg/L and the plant is reducing that level of hardness to about 210 mg/L. Optimization of the dosage can reduce the hardness

further to about 180 mg/L. This reduction however has been sporadic as equipment breakdowns and high flows have caused problems keeping the softening process on-line. As we have noted before, the dosage needs to be adjusted daily or more often based on process control monitoring. The raw water hardness in the summer is much less than in the winter. For illustration purposes, the difference could be 360 mg/L in raw water in winter compared with 220 mg/Lin the summer.

- **Eliminate Pre-Chlorination on the Filters** – The reduction of pre-chlorination on the filters during the summer months can help reduce TTHM formation. This action has to be considered carefully with procedures documented and reviewed for engineering principles. As such, it will take time for the design engineer to determine what could be done to assure the proper chlorine contact time and document that other safety protocols in water are met. This requires state approval. Any submission should be considered along with a possible change in filter media. If Granulated Activated Carbon (GAC) is installed then the pre-chlorination would be stopped or drastically reduced because of the chlorine impact on the GAC filter media. Veolia's initial investigation into changes in chlorine feed point indicate that the recommended action can be accomplished while maintaining the required regulatory contact time for disinfection.
- **Change Filters to Granulated Activated Carbon (GAC)** – The object of the other changes being made is to reduce the TOC before chlorine is added into the process. The plant by design is limited on the amount of TOC removal possible. A maximum removal of only 60% is likely if the plant is properly optimized. The change of filter media to GAC would provide the best reduction possible and provide better than 90% removal dramatically reducing the potential for TTHM formation and thus ensuring compliance with that parameter for the water system. The change in filter media; however, is complicated requiring approval by the state, design of the changes, procurement of the media and a contractor to install it. That will take time and is likely in a range of $1.5 million (more or less) in cost. The use of GAC also requires more testing and monitoring of the media and the TOC than with the current media. GAC will accumulate TOC and begin to become in effective after a period of time. Depending upon the level of TOC reaching the filters this could be as short as 3 months and as long as 9 months. The amount of TOC is dependent upon the river water quality and operation of the other plant processes. Once the ability of the filters to remove TOC is diminished, the GAC media has to be replaced if river water continues as a source. The change to lake water will not require TOC removal and the media could continue to be used as filter media for that new water source.
- **Corrosion Control** – The primary focus of this study was to assure compliance with the TTHM limits. That is not the only problem facing the city and its customers though. Many people are frustrated and naturally concerned by the discoloration of the water with what primarily appears to be iron from the old unlined cast iron pipes. The water system could add a polyphosphate to the water as a way to minimize the amount of discolored water. Polyphosphate addition will not make discolored water issues go away. The system has been experiencing a tremendous number of water line breaks the last two winters. Just last week there were more than 14 in one day. Any break, work on broken valves or hydrant flushing will change the flow of water and potentially cause temporary discoloration.
- **Eliminate a Storage Tank** - The water system has more storage than it requires, due to excess capacity in the water lines in combination with the storage tanks. The City has already employed LAN to update the hydraulic model. The hydraulic model should be used to help determine if water levels can be lowered further and even to remove some storage tanks from service. That decision may need to be made

seasonally. For example demand during water main breaks last week required extensive amounts of water. The excess storage is more a problem with TTHM formation for the system in summer than winter.

- **Prioritize Valve Replacement** - The hydraulic model shows long water age in portions of the system that appear to be contributing to the TTHM problems. LAN has updated the model to include the location of broken valves and that added information is being used to identify other system problems. The City has a contract for valve turning and repair work that should be focused on known broken valves, particularly in sections of the distribution system with old water age. This activity however must wait until warmer weather in fear of causing problems in the water system with lines freezing.
- **Target and Increase Flushing** – Flushing the fire hydrants can be useful in cleaning out lines to minimize discolored water complaints and also helping reduce the age of water. This DOES NOT mean just opening hydrants. The hydraulic model needs to be used to determine which hydrants should be opened and for how long to ensure the lines are properly cleaned. For example, this might require 15 minutes or even several hours of flushing depending on location. The flushing of hydrants also needs to include records of hydrant condition, color of water initially and after periodic increments plus chlorine residual testing. All of that information will help provide information to the engineers on the effectiveness of the procedure. Each crew doing the work should be trained to help explain the process to the public and also warn neighborhoods about flushing so that staining of laundry can be avoided.
- **Change to Lake Water** – The changes being made now to the water plant will not be the same changes required to treat lake water once it becomes available. A thorough analysis and plan needs to be made in preparation of that switch. This is going to need to include changes in how the plant is operated, like eliminating lime softening and reducing the dosages of many chemicals. Consideration will also have to be given to algae treatment when lake water is being used.
- **Operating Programs** – All of the changes discussed above are based on testing and techniques proposed by engineers and skilled operators of both LAN and Veolia. The staff will need further training and implementation of detailed protocols to successfully implement the changes and to ensure long-term success at the plant. This means the City needs to implement a series of programs to ensure success in these changes.
    - **Process Control Management Plan** (PCMP) – The amount of testing and resulting changes in chemical dosages, along with monitoring the impact on the water, will require a well-documented process that all operators follow. An example of this is jar testing, which is used by the operators to identify the most effective chemicals and dosages to optimize treatment. The staff understands the basic treatment process but needs further practice and training to become proficient in the use of routine process control to adjust for water quality. This is commonly referred to as a PCMP and is used as a standard operating procedure so that the operators on the day shift can communicate with the night shift, that operators are following the same treatment plan for water, that the adjustments are unified between different shifts and different people, that a desired water treatment quality is defined and variations from it signal alarms and that the staff knows what to do when the water quality setpoints begin to drift away from its desired quality levels.
    - **Lab QA/QC** – The operation of the water plant is dependent upon accurate lab results. Standard operating procedure needs to be set and lab technicians trained in that process. EPA and the State

set procedures and standards to be met and the staff should strive to meet those standards. The City has already purchased a TTHM analyzer but should also consider a TOC analyzer that can be an online continuous device to provide immediate information on influent and effluent levels of TOC. Part of the lab records should be historical review of data to help operators better understand the changes they make in the plant.

- **Maintenance Management** – The key to water equipment is having all the equipment effectively maintained and functioning properly. The current capital program is fixing many broken pieces of equipment and updating the plant to current standards. This however must be followed with a rigorous maintenance program that ensures the proper preventive maintenance, is able to predict when maintenance is needed to keep equipment functioning properly and responsive to changes in flows and source water quality.
- **Training** – The changes being suggested are new to the staff and as such training needs to be provided in what the changes involve, why they are being made, the impact on the water quality, and how best to run the plant. A good demonstration of skill level is for the staff to become certified by the State as a licensed water plant operator. Many utilities now require all operators to hold at least the minimum certification level as a starting point and offer incentives to increase their certification level.

- **Communication Program** – The city should lay out an immediate, written strategy for communicating with the public in the short-term, as well as a 6-to-12 month strategy that contemplates known, future events like the KWA pipeline and switch to lake water. A wide range of activities are underway to work with the public but a comprehensive and coordinated effort, with a strategic focus, will help the utility and its customers.
  - **Dedicated Communications Personnel** – The City has a single, dedicated public information officer, tasked with providing service to all of city government. The current focus on communications support for Public Works, and the anticipated needs over the next several years, indicate the city would benefit from the hiring of a staff person in Public Works who could establish a communications program designed to provide clear and concise information to a broad audience though a number of different channels. In the interim, the city could hire a communications intern, local communications firm, or somebody with experience who is able to provide reduced or no-cost services for the immediate future.
  - **Communications Planning – Public Notification** – The City should be congratulated on its efforts to keep the public informed. It is posting its monthly reports on the web page to provide transparency, though these reports are highly technical – and may be too technical for the customer base at large. They are valuable to those customers who do want this level of detail. The city should create a single-page dashboard of information that outlines the water utility's performance for the previous month, post the dashboard on the website, print copies for distribution at customer service or other reception areas, and be provided during speaking engagements or other events. This dashboard should be easy to understand, and include:
    - The number of water quality tests conducted the previous month
    - The number of violations reported

  - Whether these results are in or out of compliance
  - Information about other proactive measures such as main and hydrant replacements, or other programs to improve performance of the water utility
  - Benchmarking information so the reader has a greater understanding of how Flint compares with other similar utilities in the region and across the country

- **Public Meetings** –There should be additional, proactive coordination with neighborhood, community and civic groups to provide speakers on timely topics. Given the list of numerous responsibilities, the Public Works director cannot do it alone – the city should identify three or four other staff members, knowledgeable about the water utility who can also speak to various groups, provide information and answer questions. The development of an outreach strategy to target key neighborhood, community and civic groups also will advance the communications effort and the dissemination of information in both the short and long term.
- **Standard tools** – Work crews in the field are often the faces of the utility – the city should create standardized tools for communicating with the public that can be easily and quickly delivered to the community in the event of main breaks, flushing or pre-planned capital improvements. Tools should include:
  - Door hangers for individual distribution
  - Yard signs with simple messaging to be placed near work-sites
  - A simple tri-fold brochure with useful information about the utility and appropriate contact information
  - Specific flyers about a range of topics
  - Infographics about how the water system works, from the intake to the customer's site
- **Change in Billing Format** – The City currently has no real way to reach all customers on a regular basis and provide information. The city should consider changing from a billing postcard to using an envelope and bill stuffer. Monthly or bi-monthly bill inserts are typically used to provide educational material for customers and are standard ways to provide information. Understandably, budget considerations must be taken into account.
- **Use Public Affairs Programming and Opportunities** – The news media has been covering this topic quite extensively – there are other media-related opportunities that may reach a wider audience. Taking advantage of these opportunities will help the city relay information to its customers and the community.
  - Participate in regular editorial-board meetings to provide background information and updates on key milestones or events.
  - Identify a local weekly television program and offer to provide guests to speak about key milestones or upcoming events.

Conclusions and Next Steps

The focus of this report is to help assure TTHM compliance and then improve general water quality. The City had good results in its most recent TTHM tests, although that is to be expected with the changes made to date and the cooler weather which contributes to low TTHM formation. Warm weather will be a different situation both in the nature of the Flint River water quality and in the formation of TTHM. With those changes coming, the City needs to act quickly to make improvements before additional testing takes place this spring and summer. The summary below provides the recommended actions, a priority for their implementation and projected costs either operational or capital. The costs are rough orders of magnitude and will vary with changes in water quality, operational decisions, and engineering choices being made and in some cases require State approval. Although a priority is assigned many of these actions can take place simultaneously.

Priority	Action	Annual Operational Cost	One Time Capital Cost
1	Implement operating programs for process control, lab QA/QC, maintenance, and training. These programs are needed regardless of the TTHM issue and will help with transition to lake water. The City has decided upon a central maintenance software and the water system should be the first to utilize this program since costs are already budgeted. These programs should be initiated immediately.	$ 25,000	$ 250,000 - $ 350,000
2	Contract with your engineer and initiate discussions with the State on the reduction of chlorine prior to the filters and changing the filter media to GAC. This activity has the longest time frame for design and approval, but also is extremely critical to assuring reduced TTHM production. The current filter cleaning and maintenance project needs to be adjusted to take into consideration the change in filter media both to dispose of the anthracite instead of cleaning and to install the GAC. This entire project needs to be done by early July to assure a flow of water throughout the system. Several months are required for the engineering design, State approval, bidding of work and installation of GAC and as such needs to begin now.	$ 0	$1,500,000
	Contract with your engineer and initiate discussions with the State on the addition of 0.5 to 1.2 mg/L of either potassium permanganate (dry) or sodium permanganate (liquid). This will take time to get approved and to implement. The use of liquid tanks at the raw water pump station may be the quickest and least expensive alternative for a temporary measure.	$ 160,000 - $ 320,000	$ 50,000

	Contract with your engineer and initiate discussions with the State on the addition of a corrosion control chemical. This action can be submitted and discussed with the state at the same time as the other chemical and filter changes saving time and effort. A target dosage of 0.5 mg/L phosphate is suggested for improved corrosion control.	$ 50,000	$ 50,000
3	Increase the ferric chloride dosage to 100 mg/L depending on river water TOC levels. (Lower TOC levels can be treated with less ferric chloride.) This change can be made now and is allowed by the State.	$ 1,000,000	$ 0
	Reduce the ozone feed rate to 5 mg/. This change can be done now and does not require State approval.	($50,000 – $100,000	$ 0
	Reduce the lime dosage to minimize hardness levels after softening. This will eliminate magnesium removal during treatment, but will also reduce total hardness. A reduction in carbon dioxide dosing for recarbonation treatment also is expected due to the reduction in lime feed. This change can be made now and does not require State approval.	($270,000)	$ 0
4	Confirm with the engineer when the revised hydraulic model will be completed and if necessary for time to focus on areas of longest water age if that would speed up the effort. Identify impact of reducing tank levels or eliminating a tank seasonally to improve water age. Include with this effort a list of hydrants to flush along with time required to assure drawing fresh water through the system. The engineer has been assigned this task already and confirmation of the timing of a delivery is needed.	$ 0	Already Contracted
	Ask the engineer to identify closed valves on a map that are impacting water age and that can be bid for replacement as soon as weather permits. Have the engineer identify areas of the system where the valve contractor should be focused on finding and fixing closed valves.	$ 0	Already Budgeted
5	Implement the recommendations in the communications program including a person assigned to public works education, using envelopes instead of cards along with bill stuffers for education and provide training for staff. Envelopes and bill stuffers are expensive and might be done periodically and not every month. The cost of TTHM notices, Annual Water Quality Reports and City notices should be figured into if any additional costs would exist. Many of these changes are underway now by the City.	Position Being Budgeted	

Notes

- The costs provided are rough order of magnitude which final engineering will firm up but will fluctuate with final decisions on engineering, operating technique and water quality.
- The change from river to lake water will dramatically cut the chemical costs as less is needed once the change occurs. This means that potassium permanganate will likely not be needed, ferric will drop as much as it went up, ozone levels will be lower and little lime will be needed.

Results Expected

The real question is what changes can be expected from these results in lowering the TTHM, improving the aesthetics and preparing for the change to lake water.

- **TTHM** – The City has already made great strides in reducing the TTHM levels with the changes already made. The additional suggestions by Veolia will further reduce TTHM in the water and help get the city released from the notices being provided to customers.
- **Hardness** – The hardness entering the plant this winter is 360 mg/L with the current system reducing it to 210 mg/L and optimization will reduce to about 180 mg/L. During the summer the levels will be lower probably in the 140 mg/L to 150 mg/L range. The target set by the current best operating practices is 120 mg/L to 150 mg/L.
- **Discolored Water** – The discolored water is caused by the old unlined cast iron pipe. The water from the plant can have an impact on discolored water, but a greater concern is the breaks and construction work that disrupt the flow of water causing discoloration. A polyphosphate is suggested to help bind the old cast iron pipe reducing instances of discolored water. This along with improve flow of water and programmed hydrant flushing will help, BUT WILL NOT eliminate discolored water occurrences.
- **Change to Lake Water** – The recommendations include the suggestion of programs to help the staff better manage the treatment process, additional testing to adjust the plant and additional lab monitoring, a maintenance program focused on keeping equipment properly functioning and more training for staff to improve their skill level. Those actions will prepare the staff for the change of water sources when it comes next year in addition to developing a thorough plan for the switch.

Resourcing the world

Hey Brad:
Where is the DEQ at with approving Flint's activation of the sections of Flint and Genesee County transmission pipe?
Howard Croft said yesterday that the city's line is disinfected and ready.
Also, I made a note to expect the corrosion control plan this week. Any word on that?
Thanks,

Be aware that the GCDC hasn't reached an agreement with GLWA to reconnect their transmission pipes. Lawyers are still talking.

Not much more than what's in the news. I made a couple of

- City Council voted to approve their $2 million to use GLWA
- People are still upset, believing that DEQ is covering up their mistake.
- Most elected officials are pointing fingers at the state.
- Bottled water delivery has slowed a tad.
- Various groups are still delivering water filters, a big filter distribution occurred over the weekend.
- Mayor Walling and his challenger Weaver are debating tonight.

Subject: Flint telephone call this morning

Tom and Wayne:

During our telephone call today, Mayor Walling indicated that they have received the go ahead from the Drain Commissioner and are performing the bacti tests on the eight mile waterline. If all goes well, they may be able to begin to use DWSD water soon. The Mayor wanted to know if they can use DWSD water before the Legislature takes action on the $6M assistance package? Please advise.

Thanks,
Randy

Subject: Contract for Water

Gentlemen, I have asked City Administrator Natasha Henderson to reach out to you at Treasury Wayne about the contract for Detoit water. The Mott Foundation has questions about payments and ensuring all parties are contributing to the monthly costs as well as how an escrow fund would work to ensure funds are solely for this purpose. Time is of the essence as you know and the City is prepared to do all things necessary for the water to begin flowing as quickly as possible as we have agreed. Thanks for your tremendous efforts on this and we look forward to finalizing the agreements hopefully today or tomorrow.

--

For Immediate Release

RTAB Approves Resolution for the Use of $2 Million in Fund Balance to Reconnect to Detroit Water

Flint, Michigan – October 14, 2015 – The City of Flint's Receivership Transition Advisory Board has today approved a resolution that directs $2 Million in fund balance from the Water and Sewer funds be used to fund Flint's portion of the reconnection to Detroit as the City's water source. The Board voted unanimously to approve the measure which will compliment commitments by Governor Snyder in the amount of $6 million and the Charles Stewart Mott Foundation in the amount of $4 million, respectively, for a total reconnection cost of $12 million.

"Flint is one step closer to switching back to Detroit water with the board's approval," said Mayor Dayne Walling. "Now we need approval from the state treasurer and support from the state legislature and I urge them to act immediately." Approval from the legislature is required to finalize the negotiations with the Great Lakes Water Authority, formerly Detroit Water and Sewerage (DWSD). Once the contract between the Authority, Genesse County and the City are complete, Flint can once again begin receiving treated Lake Huron water from Detroit.

Subject: RE: Contract for Water

Mayor, The state appropriation is being made to the DEQ. I have copied Director Wyant and his Chief Deputy Jim Sygo on this. We recommend a conference call with DEQ, Mott and the City to agree on payment procedures. It will be necessary to have a list of expenditure amounts for water and any other equipment, services and supplies that will total up to the $12,000,000 budget. Treasury will participate and help any way, but it is important DEQ , Mott and the City agree on the process. We can participate in a call today or Friday. Wayne

Subject: Contract for Water

Gentlemen, I have asked City Administrator Natasha Henderson to reach out to you at Treasury Wayne about the contract for Detoit water. The Mott Foundation has questions about payments and ensuring all parties are contributing to the monthly costs as well as how an escrow fund would work to ensure funds are solely for this purpose. Time is of the essence as you know and the City is prepared to do all things necessary for the water to begin flowing as quickly as possible as we have agreed. Thanks for your tremendous efforts on this and we look forward to finalizing the agreements hopefully today or tomorrow.

Subject: contract between Flint and Genesee County
Attachments: SKM_C554e15101515460.pdf

Drain Commissioner Jeff Wright wanted you to have a copy of the contract signed today.

LICENSE TO TRANSMIT WATER

This License to Transmit Water ("License") entered into on October 14, 2015, (the "License Date" and "Effective Date") is made between the City of Flint, a Home Rule City (the "City"), and the Genesee County Drain Commissioner, as County Agency, a county agency pursuant to the County Public Improvement Act 342 of 1939, as amended, ("GCDC"). The City and GCDC may be referred to individually as a "Party" or collectively as the "Parties."

RECITALS

WHEREAS, the City has requested the Detroit Water and Sewerage Department ("DWSD") to provide the City with potable water; and

WHEREAS, DWSD water distribution system has no physical connection to the City water distribution system; and

WHEREAS, GCDC is currently purchasing potable water from DWSD and GCDC is receiving DWSD water at the water meter GN-01 near Baxter and Potter Roads, located in Genesee County and more fully set forth in Exhibit 1 (hereinafter known as "GCDC/DWSD Connection"); and

WHEREAS, GCDC has a physical connection to the City water distribution system near Center Road and Pierson Road in Genesee Township, Genesee County, Michigan, which is more fully set forth in Exhibit 2 (hereinafter known as "GCDC/City Connection"); and

WHEREAS, GCDC owns nine (9) miles of water transmission pipeline ("Pipeline") that connects the GCDC/DWSD Connection to the GCDC/City Connection; and

WHEREAS, GCDC has the ability to allow Flint to transmit water through the Pipeline from the GCDC/DWSD Connection to the GCDC/City Connection so DWSD may service the City with DWSD treated potable water; and

WHEREAS, this License shall govern the terms and conditions of Flint transmitting water through the Pipeline from the DWSD/GCDC Connection to the GCDC/City Connection; and

WHEREAS, the Parties hereto acknowledge and agree that DWSD may assign its contract to provide potable water to the City to another entity, including, but not limited to, the Great Lakes Water Authority, and, if DWSD assigns its contract to provide water to the City, all reference to DWSD in this License shall be replaced by the party to whom DWSD assigns its contract.

NOW, THEREFORE, THIS LICENSE is hereby made and mutually entered into by the City and GCDC for the mutual consideration stated herein and the Parties agree to the following:

1. **Adoption of Recitals.** All of the matters stated in the Recitals of this License are true and correct and are hereby incorporated into the body of this License as though fully set forth in their entirety herein. However, in cases of conflict, provisions of this License shall prevail over the matters stated in the Recitals.

2. **Contract for Water.** As a condition precedent to this License being effective, the City shall enter into a contract with DWSD for DWSD to supply the City with water and said contract shall require the City to pay DWSD directly for all water consumed by the City and any applicable charges, fees, or other amounts charged by DWSD. The City shall hold GCDC harmless from any and all debts the City incurs from receiving water from DWSD and any and all costs that DWSD may impose on GCDC as a result of the City receiving water from DWSD.

3. **Term.** The Parties hereto understand and acknowledge that GCDC needs the Pipeline to transmit its potable water to its customers once GCDC starts receiving raw water from KWA. The Parties agree and acknowledge that this License shall expire sixty (60) days after the City has received notice from KWA that raw water is available for the City for treatment; however, the City may request GCDC to extend this License until GCDC starts receiving raw water from KWA. The City shall not transmit water through the Pipeline after GCDC begins to transmit its potable water to its customers. The City acknowledges and consents to GCDC terminating any water transmission in the Pipeline for the benefit of the City once GCDC begins to produce and sell its potable water to its customers. The City may terminate this License by providing GCDC with thirty (30) days written notice of termination.

4. **Consideration.** In exchange for GCDC allowing the City to transmit water through the Pipeline, the City shall pay GCDC one dollar ($1.00) per month for the term of this License. The City is allowed to pay the first nine (9) months in a lump sum payment.

5. **Meters and Billing.** The City hereby grants GCDC complete access to and upon verbal request by GCDC complete control of Station 2, including, but not limited to, all meters, valves, structures, and appurtenances until the Karegnondi Water Authority ("KWA") has notified the City that water is available to the City for treatment or GCDC has provided the City with thirty (30) days notice that GCDC no longer requires access to Station 2. GCDC shall have the meter calibrated within fifteen (15) days of the execution of this License and all costs for the calibration shall be the responsibility of the City. The City shall be entitled to all data, meter reads, and other information that is collected by GCDC at Station 2. The City shall be responsible for all utility costs associated with the operation of Station 2. The City shall be responsible for all repairs to the meter and meter pit. GCDC shall notify DWSD of the monthly meter read for Station 2.

6. **Transmission of Water.** GCDC shall use reasonable diligence to allow the City regular and uninterrupted transmission of water through the Pipeline from the GCDC/DWSD Connection to the GCDC/City Connection; however, Flint shall hold harmless and indemnify GCDC for any damages, breach of contract, or otherwise for interruption of service or curtailment of supply for any cause beyond the control of GCDC. These could include, but are not limited to, Acts of God, strikes, lockouts or other industrial disturbances, acts of public enemy, orders of any kind of the Government of the United States or the State, or any civil or military authority, insurrection, riots, epidemics, landslides, lightning, earthquake, fires, hurricanes, storms, floods, washouts, droughts, arrests, restraint of government and people, civil disturbances, explosions, breakage or accidents to machinery, pipelines or canals, partial or failure of the Pipeline or appurtenances. The City shall further hold GCDC harmless from any claim for damages related to continuity of service by third parties, including DWSD, for GCDC's inability to allow the transmission of water due to any cause beyond the control of GCDC.

7. **Water Quality.** The City shall hold GCDC harmless from any water quality related claim for damages by third parties, including DWSD, served by the City, which are asserted against, or are imposed upon or incurred by GCDC and which result from, relate to, or arise out of a claim regarding the treatment of water or the quality of water.

8. **Volume Available.** The City shall hold GCDC harmless in the event that DWSD cannot meet the volume demands of both GCDC and the City. GCDC shall be entitled to receive the quantity of water requested by GCDC and the City shall be entitled to any remaining volume of water. The City shall notify GCDC daily of its anticipated water volume for that day and GCDC shall be responsible for notifying DWSD of the water volume demands for both GCDC and the City.

9. **Pipeline Malfunction.** If the Pipeline shall malfunction for any reason while the City is transmitting water through the Pipeline, GCDC shall notify the City within two (2) hours of verifying the Pipeline malfunction. Thereafter, the malfunction shall be promptly repaired by GCDC and a detailed invoice for one-half (1/2) of the total cost of the repair shall be submitted to the City. The City shall have thirty (30) calendar days to process and authorize the payment for the repair to GCDC. Payment shall be made to GCDC within thirty–two (32) calendar days by either check or wire transfer. Wire transfer instructions are available from the GCDC Chief Financial Officer. The City shall indemnify and hold GCDC harmless for any and all claims from the City or third parties that relate to the City not being able to supply water to its customers due to the malfunction.

10. **Severability.** The Parties hereto specifically agree that in case any one or more of the sections, subsections, provisions, clauses or words of this License or the application of such sections, subsections, provisions, clauses or words to any situation or circumstance should be, or should be held to be, for any reason, invalid or unconstitutional, under the laws or constitutions of the State or the United States of America, or in contravention of any such laws or constitutions, such invalidity, unconstitutionality or contravention shall not affect any other sections, subsections, provisions, clauses or words of this License or the application of such sections, subsections, provisions, clauses or words to any other situation or circumstance, and it is intended that this License shall be severable and shall be construed and applied as if any such invalid or unconstitutional section, subsection, provision, clause or word had not been included herein, and the rights and obligations of the Parties hereto shall be construed and remain in force accordingly.

11. **Governing Law and Venue.** It is specifically agreed among the Parties to this License that Genesee County, State of Michigan is the place of performance of this License. In the event that any legal proceeding is brought to enforce this License or any provision hereof, the same shall be brought in the Genesee County Circuit Court.

12. **Interpretation and Construction.** For purposes of interpretation and construction of this License, both the City and GCDC shall be deemed to have been the drafter of this License and this License shall not be construed against any Party to this License.

13. **Modification.** This License shall not be modified, altered, or amended except through a written amendment signed by the Parties.

14. **No Third Party Beneficiaries.** This License is not intended to confer upon any person or entity, other than the Parties hereto, any rights or remedies of any kind or nature whatsoever.

15. **Notices.** Other than invoices and payments, any notice, communication, request, reply or advice (herein severally and collectively, for convenience, called "Notice") herein provided or permitted to be given, made or accepted by any Party to any other Party must be in writing and may be given or be served by depositing the same in the United States mail postpaid and registered or certified and addressed to the Party to be notified, with return receipt requested, or by delivering the same to an officer of such Party, or by prepaid telegram when appropriate, addressed to the Party to be notified. Notice deposited in the mail in the manner described above shall be conclusively deemed to be effective, unless otherwise stated herein, from and after the expiration of three (3) days after it is so deposited. Notice given in any other manner shall be effective only if and when received by the Party to be notified. For the purposes of notice, the addresses of the Parties shall, until changed as hereinafter provided, be as follows:

To GCDC: **Genesee County Drain Commissioner's Office, Division of Water and Waste Services, G-4610 Beecher Road, Flint, Michigan 48532.**

To the City: **City of Flint, 1101 South Saginaw Street, Flint, Michigan 48502.**

The Parties hereto shall have the right from time to time and at any time to change their respective addresses and each shall have the right to specify as its address any other address by at least fifteen (15) days written notice to the other Party hereto.

IN WITNESS WHEREOF, the Parties hereto acting under authority of their respective governing bodies have caused this License to be duly executed in several counterparts, each of which shall constitute an original, all as of the day and year first above written, which is the License and Effective Date.

RESOLUTION NO.: _____

PRESENTED: 10-12-15

ADOPTED: _____

RESOLUTION AUTHORIZING THE CITY ADMINISTRATOR TO TAKE NECESSARY ACTION TO CONVERT TO THE DETROIT WATER SYSTEM

BY THE CITY ADMINISTRATOR:

In order to promote the health, safety and welfare of this community, it is in the best interests of the City of Flint for the Detroit Water and Sewer Department (DWSD) to supply the City with treated water pending completion of the Karegnondi Water Authority; and

In order for DWSD to supply the City with water, it will be necessary to utilize pipe owned by the Genesee County Drain Commission (GCDC); and

The City, DWSD and GCDC are actively negotiating the terms of the necessary agreements to ensure this transition occurs as soon as possible; and

IT IS RESOLVED that the City Administrator is hereby authorized to enter into agreements with DWSD and GCDC for conversion to the Detroit Water System.

APPROVED AS TO FORM:

Peter M. Bade, City Attorney

Jody N. Lundquist, Chief Financial Officer

FOR THE CITY OF FLINT:

Natasha L. Henderson, City Administrator

Good Morning Gentlemen,

Jim has placed a call to Senator Levin asking him if he would be interested in serving in some capacity on the Flint water review but they have not connected. To be fair to the Governor he wanted to make him aware that he would like Senator Levin to have a role in the process.

Thanks,

Andy

SENATE MINORITY LEADER

State of Michigan
Executive Office of the Governor
P.O. Box 30013
Lansing, MI 48909

Governor Snyder,

You have stated you have plans to formalize an investigation into the Flint water crisis using an outside group of experts. As we have discussed, we should take care to appoint an individual who is highly qualified to investigate.

To that end, I request that you appoint former Senator Carl Levin as chair of any panel you create. As you are surely aware, Sen. Levin served as the chair of the Permanent Subcommittee on Investigations during his tenure in the Senate, in addition to a number of other government oversight subcommittees.

Even now, Sen. Levin is sharing his passion for aggressive government oversight at Wayne State University, where he teaches students how to use investigatory tools to improve public policy, and serves as chair of the new Levin Center. I cannot think of an individual better suited to restoring trust in our state government.

Please strongly consider my suggestion and help us take steps to ensure a thorough and accurate investigation.

Sincerely,

Jim Ananich
Senate Democratic Leader
District 27

Let me know what time works. They should certainly be involved but I think for our community to feel respected and restore trust it will take someone like Senator Levin. He has longstanding relationships with the community and is trusted.

Larry is awesome but he admittedly is not the person to thoroughly review employee policies within a department? How a culture got so bad in the City of Flint and DEQ's water departments that no one thought they should step up and try and stop this. This is as much HR and bureaucracy knowledge as it is lead issues.

I think we see this as two parts.

One being policy, which Sikkema/Kolb et al will do great at.

Two being oversight, ensuring all the bad actors from state and local government are held accountable and that the people of Flint get the answers they are so desperately are searching for.

We believe this group lacks the ability in the latter department. That's why Levin doing something would be tremendous. He seemed generally interested.

To: Wurfel, Sara (GOV) <WurfelS@michigan.gov>
Subject: state money for detroit water

Sara:
I was at a City Council meeting last night when Flint City Administrator Natasha Henderson said the state has only wired Flint $2 million of the $6 million approved by the state Legislature.
She said the city has been told it will receive an additional $2 million in January and another $2 million in April.

Henderson said she's asked that the money be sent immediately because the city was required to pay Detroit the entire $12 million upfront, before the water was reconnected, and its water and sewer fund balance has dropped significantly as a result.
Several council members also spoke about this, and Council President Josh Freeman called the payment plant "beyond ridiculous" given the city's financial position.
Is there someone who can talk to us about this?

MICHIGAN HOUSE OF REPRESENTATIVES

SHELDON A. NEELEY

ASSISTANT DEMOCRATIC WHIP

STATE REPRESENTATIVE

COMMITTEES:
HEALTH POLICY
LOCAL GOVERNMENT
TRANSPORTATION AND INFRASTRUCTURE

October 22, 2015

Department of the Treasury
State of Michigan

Dear Treasurer Nick A. Khouri,

I write to you today concerning a serious matter involving the city of Flint and its switch to the Detroit water system.

Flint prepaid an escrow account of $10 million for the switch and the state was obligated to significantly assist in this payment. The Detroit Water Authority required this set-up prior to restoration of the water service to Flint. As a result, the city has expended substantial resources beyond their commitment in order to activate restoration of service.

Furthermore, the Ruth Mott Foundation will not release their supplemental funds because they subscribe to the plan of release for state funds.

I am asking you and the Department of the Treasury to release the remaining agreed upon funds, otherwise the city of Flint will face financial hardships even more disastrous than it has previously seen.

For the Love of the Community,

Sheldon A. Neeley, State Representative
34th District

Natasha,
Your proofs were received by Treasury and we have been directed to wire the remaining $4 million tomorrow. I have left a message for Kimberly at the Mott Foundation advising her of the
wire transfer that the state will be making tomorrow. AS we do not control disbursement from Mott, you will need to work directly with them.

Ms. Henderson,

Please find attached the City of Flint RTAB reports for the period ended September 30, 2015. Budget amounts reflect amendments that had been adopted by Council and approved by the RTAB prior to September 30. Per our conversation with Mayor Walling last month, I have added rows illustrating Fund Balance for each fund as required by ordinance.

In your review of the attached report, please let me know if you have any questions or if any additional information is required.

Best regards,

Jody N. Lundquist

I am not sure how you are reading that?... I see $10mm going to DWSD from Flint.
Just keep in mind we are sending them $4mm. We already sent them $2mm. They were to put in $2mm of their own & $2mm was suppose to come from Mott. And can't say for sure but Mott may have only kicked in $1mm at this point. [but that is between the City & Mott] Sygo was going to call Mott to let them know what we are doing.

Subject: RE: Question for you...

Great to see the Op-Ed, I'm tired of seeing good people getting kicked around without a chance to set the record straight.

Frankly, the everyday Flint citizen has been very poorly served by these folks, and without help the city would have been bankrupt and my guess the problem exacerbated. Every single one of us is very disappointed and disheartened by the lead issue, and no one, especially you and I, thinks lead is acceptable at any level even though the feds recognize that a certain level is to be expected. A regular Flint citizen has every right to be ticked off by the findings, and I certainly don't blame them for being irritated they have this problem, need bottled water and filters, etc., but it's the old pipes that are the problem.

Lead doesn't magically appear or disappear because of the Flint River water, which we all, including you, expressed a lot of reservation about using. But, the river was always the back-up long before EM's and state involvement, and the locals went forward with the same understandings. Frankly, the response to the "dirty" water and the smell obviously precipitated chemical cures which may or may not have facilitated the leaching. Some of the levels will be relieved by the Lake Huron water, but not the essential issue in old cities throughout the country where the only resolution to lead levels is getting rid of old houses with lead issues and old pipes. Quite an undertaking, but without a viable city it could never be tackled.

Subject: New reports on Flint and local government issued by MSU
Attachments: beyond state takeovers.pdf; flint EM years.pdf

Good Morning,

Please find attached some new reports from MSU regarding the Flint EM years (2011-2014) which is a follow-up to our 2011 report on Flint.

Find here the original Flint report:
https://www.cityofflint.com/wp-content/uploads/Reports/MSUE_FlintStudy2011.pdf

The second report documents the role of state government in the fiscal affairs of Local Government. In particular, you will note:

- Page 9, figure 4 that Michigan escalated its local tax limitations more than almost any state except Colorado
- Page 11, figure 5, Michigan is a stick state in regards to local aid
- Page 14, figure 6, MI is ranked as being high cost and high revenue pressure (meaning revenue restrictions) which is the worst of both worlds

Our research points to the fact that Michigan policies are a major part of the cause of local fiscal distress, not the only cause but a major contributing factor. This is the first time we are aware of being able to quantify this conventional wisdom and place it in the fifty state context.

Thank you

Eric

Executive Summary

One provocative pattern to emerge from the Great Recession is that instances of acute local fiscal distress have clustered in certain states and not others. As recently as last year in Michigan, a state appointed Emergency Manager was operating in each of 17 local governments and school districts. A recent California Policy Center report suggests that more than a dozen cities and counties in California – a state that has already experienced three recent, high-profile municipal bankruptcies and a near-bankruptcy in San Jose, the "capital of Silicon Valley" – are on the cusp of defaulting on general obligation bonds

With the generous support of the C.S. Mott Foundation and Michigan State University, we have engaged in a multi-pronged, multi-method research program to assess the crucial but often overlooked role of state governments in shaping the ways in which cities respond to financial difficulties. This report, based on our analysis of a unique, nearly half-century-long dataset of state and local financial and policy information and correspondence with state officials, analysts and legal experts involved in state-local fiscal affairs, elaborates several key findings:

- **Municipal fiscal distress is not simply a *local* problem. State laws and policies provide state governments with extraordinary influence over the ability of cities to balance revenue and expenditure flows.** The common perception that critical taxing and spending decisions are largely within a city government's control tends to conceal this fundamental detail about American state-local fiscal relations.
- **The ways in which state lawmakers act on this influence varies from state to state and over time.** We refer to the complex mix of laws and policies that prescribe the powers, rights and capacities of local lawmakers to respond to their financial conditions as the **state context for local fiscal distress.** Section 1 of this report assesses key elements of this state context for the lower 48 states since 1970.
- **Some states incubate local financial stress by simultaneously driving up spending pressures on their cities while curtailing their capacity to raise critical revenue.** Since the 1970s, the proliferation of state-imposed tax revenue limitations, coupled with recurring cuts to state aid, has fostered a system that limits a city's ability to fund critical services. Some state governments further undermine the fiscal capacity of their cities via state laws and policies that engender steep expenditure-side pressures (e.g., devolving program responsibilities or driving up labor costs). We classify these states as **incubators of fiscal distress.**
- **Michigan incubates financial stress among its local governments.** Michigan's particular mix of stringent limitations on local revenue and its relatively low level of financial assistance to cities, coupled with spending pressures stemming from spiking local service burdens and increased labor costs, creates conditions that drive up the potential for local fiscal distress.
- **Because state governments can foster dramatically different state contexts for local fiscal stress, there is no single model policy for state intervention in distressed cities or for prevention of local fiscal distress.** A policy that does not address a state's unique context is unlikely to help cities escape financial trouble over the long term. State lawmakers must decide which legal and political tradeoffs they are willing to make to support city fiscal health. Michigan lawmakers, for instance, must recognize that the state context contributes to the problem of local fiscal distress. An aggressive intervention policy does little to curtail the consequences of this state-imposed context. Section 2 of this report draws policy lessons from comparable states in an effort to illustrate alternative approaches to state involvement in local fiscal affairs.

This report's practical recommendations are aimed at assisting the C.S. Mott Foundation, state and local officials, and Michigan residents in identifying a more effective policy and legal approach to local fiscal crises. These are not overly startling recommendations, yet they are easy to neglect because policymakers tend to focus more on short-term political gain rather than the histories and unintended consequences of policies that, over time, become increasingly difficult to alter. Some key recommendations:

- **Creating a state agency that coordinates services to local governments and offers technical support and fiscal monitoring.**
- **Raising awareness among citizens and state decision makers that the causes of fiscal distress are not solely at the local level. Though state governments are certainly part of the solution, they can be a big part of the problem as well.**

Introduction

A recent spate of research and media reports suggest that as the fiscal consequences of the Great Recession continue to subside, state and local fiscal conditions are on the upswing. American cities and locales, however, are not yet out of the woods. A recent analysis from the National League of Cities strikes the proper tone of caution when reporting that, though indeed *state* governments have recovered (albeit slowly), "...*local* fiscal health has not yet fully returned to pre-recession levels. ... While tax revenues continue to improve, increases in service costs, long-term infrastructure needs, employee wages, and pension and healthcare obligations, along with decreased levels of state and federal aid, continue to constrain the [local] fiscal outlook" (McFarland and Pagano, 2014, p. 1, emphasis added).

One thought-provoking pattern to emerge from the aftermath of the Great Recession is that the fiscal outlook seems to be particularly bleak among local governments in certain states. The city of Detroit's bankruptcy proceedings may have indicated that Michigan is something of a hotbed for local financial disaster. Yet a far more damning indicator is the prevalence of financial distress among the state's other local governments. As recently as last year, 17 local governments and school districts were operating under the control of a state-appointed emergency financial manager. Recently, Michigan's most populous county, Wayne, was recently designated for financial emergency status as well. Michigan does not stand alone. News from California, a state that has already seen four cities enter the municipal bankruptcy process since 2008, is equally discouraging. The authors of a recent report conducted for the California Policy Center argue that more than a dozen cities and counties in California are statistically far more likely than "a typical U.S. city or county" to enter bankruptcy proceedings or default on general obligation bonds, with several cities – such as Compton, King City, Sutter Creek and Ione – are a whopping 20 to 40 times more likely to experience acute financial crisis (Joffe and Larkedring, 2015).

What is it with local governments in these states? When it comes to urban fiscal problems, there is much blame to go around. Some blame a mixture of national and global economic forces beyond the control of state and local policymakers. Others contend that the cities facing severe budget crises have only themselves to blame. The goal of this report is to refocus attention on the crucial but often overlooked role of state governments in determining the ways in which cities respond to financial difficulties. How and in what specific ways do state governments structure this local response? Is it possible to assess the fiscal value that all states – via their mix of policies, laws and institutions – may add to or take away from local fiscal decision making? Is it truly more challenging to gain and maintain fiscal sustainability in certain states than it is in others? And in light of this consideration of the role that state governments play in structuring local fiscal decision making, in what ways do state governments choose to – or choose not to – internalize their role in the design and administration of their fiscal distress intervention policy? In other words, can we identify policy self-awareness among state governments that place particularly onerous fiscal pressures on their local lawmakers?

To respond to these important questions, we, with the generous support of the C.S. Mott Foundation and Michigan State University, set out on a multi-pronged, multi-method research program at a critical time in which a new era seems to be dawning for state-local fiscal relations. This report summarizes the findings of the first stage of this ongoing project.

Section 1 of this report develops an indicator for the state context for local fiscal distress based on the mix of state laws and policies that directly influence the revenue and spending decisions of local governments. This section uncovers a number of compelling patterns in the state imposition of revenue and spending pressures over the past quarter-century. Chief among these patterns is that, although a number of states have taken measures to severely limit the revenue capacity of their local governments (thus reducing the resources available to maintain critical services) and several states have devolved greater service responsibilities (and higher spending burdens) to their local governments, only a small handful of states simultaneously drive up spending pressures while aggressively curtailing local governments' capacity to raise revenue. Taken independently, state-imposed revenue- and expenditure-side pressures can play a determinative role in local fiscal decision making. Taken together, as in states such as Michigan and California, they incubate local fiscal distress and can serve to foster fundamental budgetary imbalances that more fiscally challenged local communities are ill-equipped to overcome.

In Section 2, we draw on interpersonal communications with key personnel in several states to assess key elements of state policies for intervening in fiscally distressed local governments. We set out to identify similarities in intervention policies – of which Michigan's is the poster child – and to learn how other states approach local fiscal crises differently. From our work with the state officials, we illustrate how state governments can more effectively align policy with the nature of the problems faced by cities in distress, as well as how state-imposed constraints hamper cities' abilities to balance revenues and expenditures over the long-term. In Section 3, we combine the lessons from Sections 1 and 2 to outline recommendations that can assist the C.S. Mott Foundation, state and local officials, and Michigan residents in identifying a more effective approach to local fiscal crises.

Section 1: Assessing How States Set the Context for Local Fiscal Distress: Revenue Squeezes and Expenditure-side Pressures

Two essential powers that local officials enjoy are their authority to raise revenues and their power to allocate those revenues as they see fit via public expenditures. In local media and policy research, city officials are sometimes lauded for what are perceived as exciting local policy outcomes, such as when a city makes a significant move up the "America's Greenest Cities" or "Child Well-being and Health" rankings. More commonly, they are chastised for decisions deemed detrimental to the city's future, such as providing generous benefits to the municipal workforce, slashing essential services, enacting a rigid historical preservation agenda or raising licensing fees. Yet the common perception that critical taxing and spending decisions – and, by extension, the apportionment of blame and credit associated with the outcomes of such decisions – are largely within a city government's control conceals a fundamental detail about American state-local fiscal relations: state laws and policies provide state governments with extraordinary influence over nearly every aspect of city budgeting. From the type and level of financial assistance that state governments deliver to state-imposed controls over local revenues; to the growing practice and use of state mandates, preapproval and preemption; to minimum service standards; to the formal or informal consultations, advice or technical assistance that state governments may (or may not) provide, local governments in America, in the words of influential legal scholars Gerald Frug and David Barron (2008, p. 75), simply "do not have anything like the kind of local fiscal autonomy often attributed to them."

States influence local governments' capacity to balance revenue and expenditure flows in a variety of ways. In this report, we focus on two core dimensions of this state context for local financial distress.[1] The first is the degree to which states participate in adding or reducing local revenue capacity via the policy balance between the buoyancy of state-granted aid and shared revenue, and the severity of state-imposed controls over city tax revenues. Although most states exhibit a relatively balanced policy approach to local revenue capacity, some state governments have responded to local revenue challenges by granting greater access to state intergovernmental aid while mostly suppressing financial controls over local taxes. These are revenue "carrot" states. Another group – revenue "stick" states, of which Michigan is a prime example – have responded to local revenue challenges by ratcheting financial controls while offering thin or uncertain compensatory aid. Simply put, we expect it to be far more challenging to maintain a sustainable fiscal outlook in states that simultaneously suppress own-source revenue capacity and transfer very little aid to municipalities, particularly during national or state economic downturns.

State policies and actions also burden the opposite end of local budgetary processes: decisions over public expenditures. Few, if any, local spending responsibilities exist because cities choose to take them on. The state decides.[2] Spending pressures can be subtler. For instance, local labor costs, which account for a large slice of most cities' budgets, are heavily influenced by state policies and regulations concerning municipal employees' wages and level of retirement and health care benefits.[3] This basic fact should give pause to those who instinctively attribute chronic local fiscal distress to "profligate spending on public employees" (Greenhut, 2012, pp. 1-2) or "spiraling labor and pension costs" (Rozansky, 2012). To borrow again from Frug and Barron's seminal work (2008, p. 199), "Although cities are often criticized for granting overly generous pensions and health care to their employees, sometimes they become supporters of municipal employees' benefits because the state requires them to do so." Our more general argument here is that it is foolish to claim to correctly diagnose the causes of local fiscal distress without careful examination of the spending context in which states place their cities. In this paper, we aim to capture a large slice of this expenditure-side context by assessing state public sector collective bargaining policies (specifically, those covering municipal police, firefighters, teachers and other local employees) and public employee union membership coverage.

1 Formally defined as the complex, multidimensional, legal-policy frameworks that prescribe the powers, rights and capacities of local lawmakers to respond to their financial conditions.

2 Via specific provisions (or the absence of such provisions) regarding local statutory authorization, budgetary constraints or more general interpretations of local governments' home rule authority.

3 For instance, Michigan, even after the adoption of right-to-work legislation in late 2012, mandates binding arbitration for public safety officers in the event that involved parties in a labor contract dispute cannot reach an agreement. Massachusetts pays out benefits to local employees through the State-Boston Retirement System via formulas established by state law. Illinois law does not mandate city or employee benefit or contribution levels, instead favoring local flexibility in the control over pension costs.

The final segment of this section considers how these revenue- and expenditure-side pressures interact within and across all U.S. state governments. As one might expect (or at least hope), these two competing dimensions tend to work against one another. States that are more revenue stick (meaning local tax limitation increases outpace the distribution of state aid) tend not to impose equally exacting expenditure-side pressures, at least in relation to local labor costs. For many states that do drive up labor and service costs via their mixture of policies, these costs are at least partially offset via a more resilient and vibrant aid environment, coupled with limited own-source revenue restrictions. A few states, such as Michigan and California, place strict limits on local own-source revenues while at the same time providing only meager intergovernmental aid and imposing costly labor and service obligations. We contend that these states have structured local fiscal policymaking in a way that effectively incubates local financial distress. These state contexts are the most egregious in hampering the exercise of local fiscal power; yet the nature of the problem for cities may be much worse – state-imposed budgetary imbalances can engender recurring structural deficits and diminished local service capacity, particularly among the states' older, industrial urban areas.

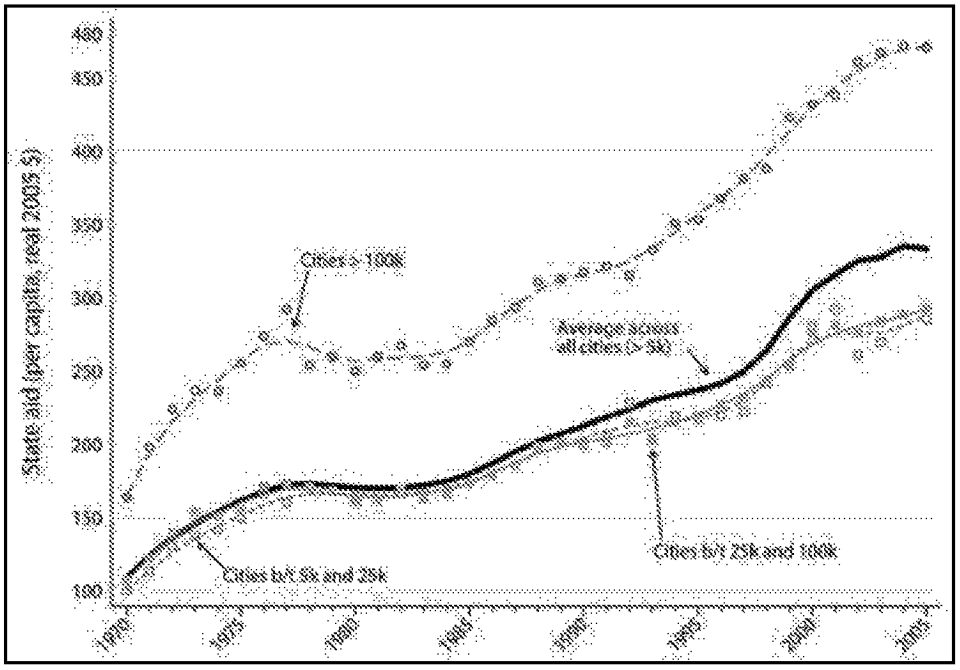
(1) Squeezing Local Revenue Capacity: Thin and Fragile State Aid; Escalating Local Tax Limits

State governments, by virtue of their superior constitutional position, have sweeping legal powers to regulate local finance. Central to our assessment of the state's role in local fiscal distress are state controls over the two dominant sources of city revenue: state aid and local taxes. Local governments occupy a weak position in the American federal system, causing local officials to rely heavily on, in the words of one analyst, "whatever sources of income the states are willing to let them tap into" or "whatever financial assistance" the states are willing to provide (Berman, 2003, p. 89). Sbragia (1983) aptly refers to the condition of American federalism as "the municipal money chase," and in the absence of a vibrant federal aid environment in the United States, state aid – in the form of shared taxes (typically sales, income and gasoline) and restricted or unrestricted grants – continues to be a major source of local government revenue, accounting for roughly a third of local revenue, on average, during the past two decades (Berman, 2003; Urahn et al., 2012).[4]

The importance of a well-designed state aid system is hard to overstate. It allows local officials greater flexibility in responding to economic pressures and the service needs of residents. This flexibility is particularly valuable during periods of economic downturn. Because local governments vary widely in their tax bases and in their ability to raise critical own-source revenues, influential research illustrates the equalizing potential of state aid, particularly in helping to smooth out revenue gaps between wealthier and poorer local jurisdictions (Pelissero, 1984; Stein and Hamm, 1987). In the past few decades, very few states target aid to local governments as a function of local need (Stein and Hamm,

4 Though formulas for the distribution of local aid can vary significantly across states (as well as within states over time), all states provide some form of aid to local governments – often from a historical exchange in which cities would forgo the right to collect certain taxes in exchange for the states returning revenues from those taxes in some form. States typically allocate shared revenue for specific purposes or link it to particular functions of local government. Some shared revenue, however, is unhindered by such state restrictions and can be spent as local lawmakers see fit.

Figure 1. Mapping the Average State Aid Environment Since 1970

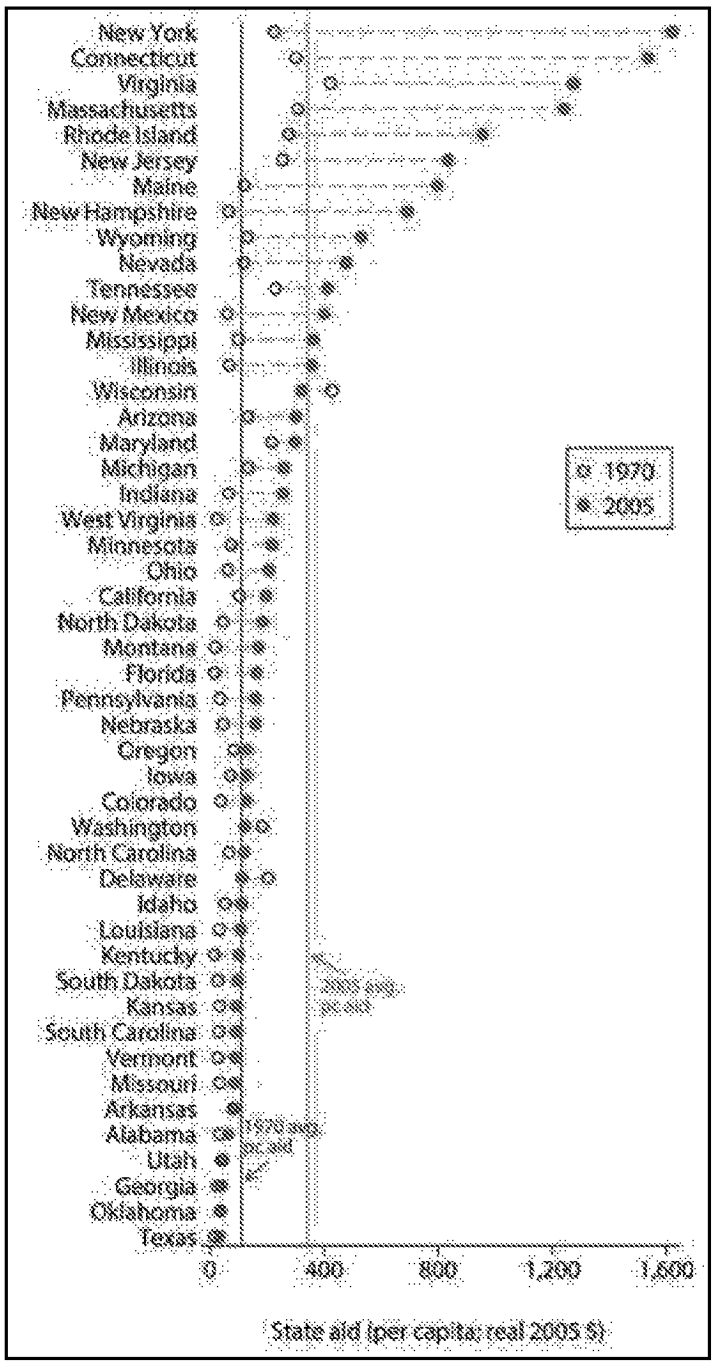


1994). The level of state aid that is available can make it possible for certain jurisdictions – for instance, older, industrial cities experiencing significant job loss coupled with a much reduced tax base – to at least afford minimum levels of services and possibly respond to growing service demands on the heels of a crippling state or national recession (see Ladd and Yinger, 1994).

How then can we characterize the critical state aid portion of the state-controlled revenue environment for American cities? Figure 1, which illustrates trends in per capita state aid to three classes of city governments, shows a steady upward trend in transfers (per capita) received from state governments. Though it is beyond the scope of this project to analyze specific revenue-sharing rules and aid formulas over time and across state contexts, our city financial data allow us to compare important trends in what the Census of Governments classifies as "Total Intergovernmental Revenue from the State Government."[5] In other words, we plot data indicating the fiscal outputs of these rules and decisions. As Figure 1 illustrates, the positive trend over time is particularly strong for cities with populations over 100,000.[6] On average, it would seem that state governments have helped at least larger cities meet increasingly difficult financial conditions through the extension of intergovernmental transfers.

Figure 2, which compares levels and growth of per capita state aid across the contiguous 48 states, paints a bleaker portrait. Consistent with the findings presented in Figure 1, 43 of the 48 states exhibit positive growth rates, meaning that roughly 90 percent of the lower 48 states provided higher levels of aid in the current era than in the early 1970s (mean increase = 256 percent). Figure 1, however, masks the considerable unevenness with which state governments deliver aid. This unevenness is on display in Figure 2, where fewer states provide above average levels of aid, and most states exhibit relatively flat growth in the distribution of state aid.[7]

Figure 2. The Uneven Development of State Aid Environments



5 This includes state grants-in-aid, regardless of basis of distribution; local share of state-collected taxes; payments in lieu of taxes on state property; and reimbursement for services performed for state government (e.g., care of state prisoners in local jails, construction or maintenance of state highway facilities, etc.) (U.S. Bureau of the Census, 2006).

6 In 1970, these cities received roughly $160 per capita (in real 2005 dollars) in state intergovernmental revenue; in 2005, the most recent year in our time series, average per capita aid was $470. Though the growth rate for small and medium-sized cities is not as steep, the steady uptick in average per capita state aid exemplifies a healthier state aid environment than in the past.

7 As is indicated by the maroon-colored vertical line, the average per capita aid provided to local governments in 2005 was just over $340. Texas, Oklahoma, Georgia and Utah provided around $40 per person, on average. New York, Connecticut, Virginia, Massachusetts and Rhode Island, on the other hand, distributed intergovernmental revenue at an annual rate at or around $1,000 per resident.

One key reason for this unevenness is that state aid tends to ebb and flow with changing state-level economic conditions (Berman, 2003, pp. 100-102). More generally, state intergovernmental aid – particularly those discretionary resources distributed via statutory aid policies and unprotected by state constitutions – is inextricably linked to state legislative budget battles. State legislatures and governors, scrambling to balance their own budgets, are simply more likely to risk citizen backlash from significant aid cuts during periods of widespread budget shortfalls. What is more, state lawmakers across the country seem to be looking with decreasing favorability on the idea of, in the derisive words of one Wisconsin legislator, "being an ATM machine for local governments" (Rinard, 1999, p. 1).

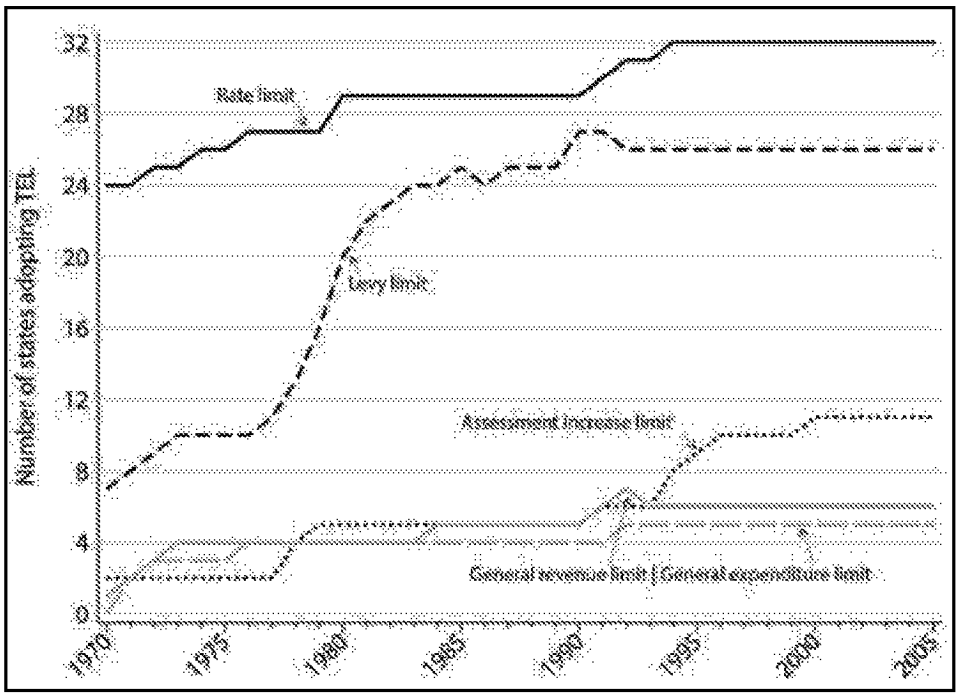
Figure 2, however, illustrates that not all states have chosen to respond to their revenue difficulties by making cuts to intergovernmental aid. A study from Pew's American Cities Project reports that Connecticut, which provides one of the more vibrant aid environments in the country, chose to slightly bolster intergovernmental aid to its local governments on the heels of the Great Recession (in fiscal year 2010) and has not reported a cut since then. Nebraska, on the other hand, canceled all funding to its local governments in 2011; Maryland, California, Arizona, Nevada, Minnesota, Texas, Virginia and Wyoming made 5 to 6 percent cuts that same year. All else being equal, we would expect it to be far less onerous to balance revenue and expenditure flows in city governments in states such as Connecticut, New York or Massachusetts – i.e., states where key state decision makers seem less inclined to shift service costs to local governments via cuts in state aid during times of state financial stress – than in cities facing similar sets of environmental, political or managerial conditions in states that provide lower or more volatile levels of intergovernmental aid.

State policies regarding levels and delivery of state aid are but one piece of an increasingly complex set of structures that govern local revenue capacity. In a classic textbook on American intergovernmental relations, Stephens and Wikstrom (2006, p. 196) remark, "Without doubt, the most important mechanism that the state has for influencing the political behavior of local officials involves financial assistance." This may have been true in the 1970s or 1980s, and to be sure it is a fundamental tenet of traditional models of fiscal federalism, but the most important mechanism for controlling local fiscal behavior in the past quarter-century is the tax and expenditure limit (TEL) – a label that broadly captures state attempts to limit the taxing and/or spending authority of its local governments through constitutional amendment or legislative enactment.

State governments have long imposed some manner of TEL.[8] Figure 3 tracks the adoption of TELs since 1970 across the four most common categories: *rate limits* – which are overall or specific tax rate limits that set the ceiling on the aggregate tax rate, which cannot be exceeded without a vote of the electorate; property tax *levy limits*, which constrain the total amount of revenue that can be raised from the property tax (independent of the property tax rate); *assessment increase limits*, which cap the growth rate of assessed values and is intended to control the ability of local government to raise revenue either by reassessment of property or through escalation of property values; and

8 For instance, the first states to establish property tax rate limits were Rhode Island (1870), Nevada (1895), Oklahoma (1907) and Ohio (1911).

Figure 3. Proliferation and Layering of TELs Since 1970

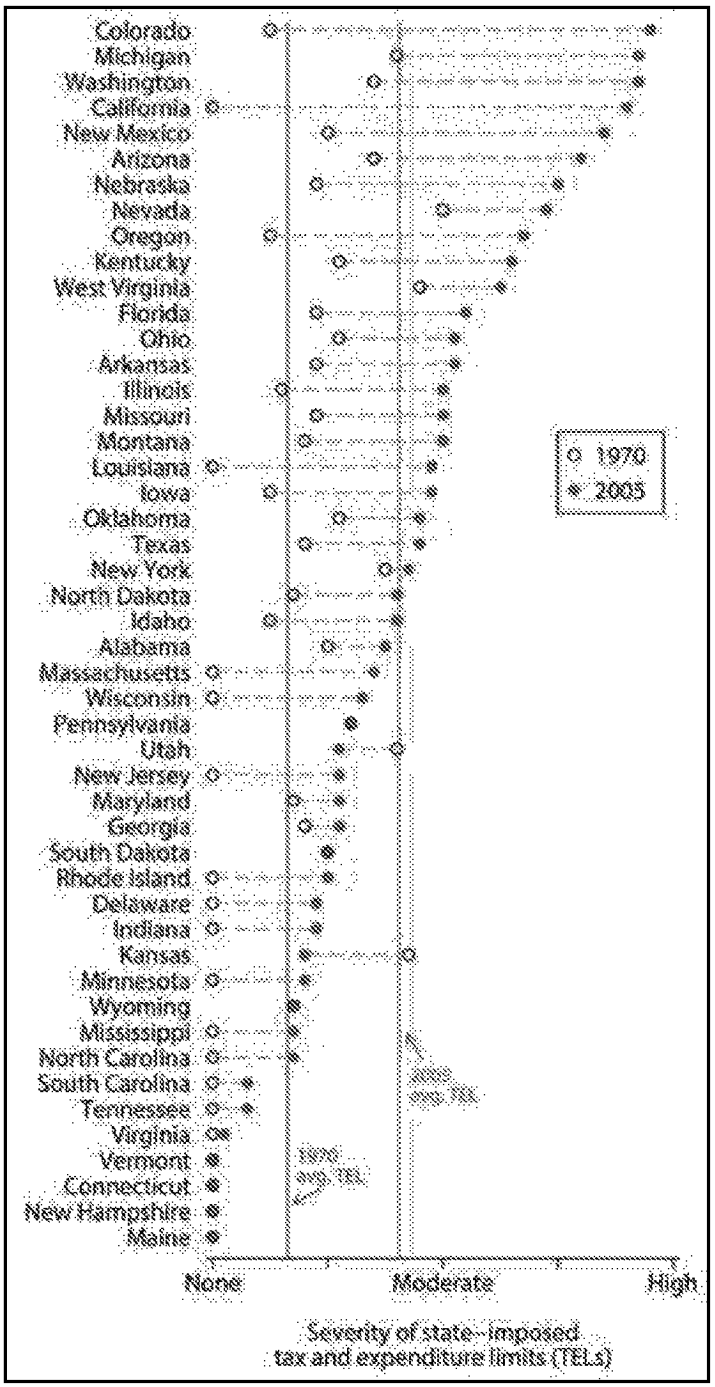


limits on *general revenue* or *general expenditure* increases, which set the maximum growth rate of total revenue or total spending.

Whereas a great deal of research has shown that the appearance of even a single TEL constrains the capacity of local officials to generate revenues on their own (see Poterba and Rueben, 1995; Shadbegian, 1996, 1999; it is the accumulation or layering of fiscal constraints that can be particularly damaging to the revenue capacity of local lawmakers.[9] In single-TEL states, for instance, raising assessments might be employed to circumvent property tax rate limits and vice versa; in states that impose only an assessment cap, this single limitation could potentially be overcome by adopting a higher rate. These methods of circumvention were common early in the 1970s, when 24 of the 29 states adopting some form of TEL imposed only one constraint (mostly rate limits), and a mere five states imposed two revenue TELs. Today, at least 27 of the contiguous 48 states impose multiple revenue TELs. Nineteen states impose two, and eight states – Arizona, California, Colorado, Michigan, Nebraska, Nevada, New Mexico and Washington – apply three local tax limitations.

The number of TELs in a state does not necessarily capture the severity of the limitation(s), though it is reasonable to expect a higher frequency of TELs to create a more restrictive local tax environment. Figure 4 displays a measure of TEL severity (see appendix regarding our research approach beginning on page 25), with the open point illustrating the severity of the state's TEL in 1970, the closed (maroon) point plotting restrictiveness in 2005, and the dashed horizontal line representing the change in severity of the state's tax limitations.[10] Figure 4 reveals some noteworthy patterns that illustrate the reality of state policy choices regarding local tax structures. Michigan, a state that imposes one of the more onerous sets of revenue restrictions, achieved this status via a one-two punch of major constitutional amendments enacted by voters: the Headlee Amendment in 1978 and Proposal A in 1994.[11] The Headlee Amendment capped local property tax millage rates to the rate of inflation. Proposal A – a constitutional amendment quite similar to Proposition 13 in California, a state with a similarly restrictive fiscal relationship with its locales – further limited local property tax revenue growth

Figure 4. TEL Escalations by State



9 Rising adoption rates are on display in Figure 3. So, too, is the increasingly common phenomenon of TEL layering, meaning the imposition of state-imposed controls on multiple elements of the local tax structure. And those controls are growing: in 1970, 29 of the contiguous 48 states had at least one revenue TEL; today, some 41 of 48 states have at least one local revenue limit.

10 The measure of TEL severity, initially proposed by Amiel, Deller and Stallmann (2009), indexes six key characteristics: the type of TEL (see discussion above), if the TEL is statutory or constitutional, growth restrictions, method of TEL approval, TEL overrides and exemptions, and method of override. For a more detailed discussion of this measure, see Amiel, Deller, and Stallmann (2009) and Maher and Deller (2013).

11 Constitution of the State of Michigan, Sections 25-33.

by changing the system of assessment to cap individual property values and prohibiting cities from "rolling up" a millage to the rate of inflation if actual property value growth was lower than inflation.[12] Taken together, these two large TEL ratchets, which came 17 years apart and layered on top of an already aggressive property tax rate limit, placed tremendous pressure on local lawmakers' ability to generate critical revenue (Brunori et al., 2008). Contrast Michigan's approach to that of Massachusetts's Prop 2½, a similarly infamous state-imposed TEL, which was passed by referendum in 1980 and effectively caps local property tax levies at 2.5 percent of real property value. Massachusetts's relatively moderate position on the severity index owes much to the state's choice to apply no corresponding rate, revenue or assessment limits on local lawmakers.

TELs, taken alone, are neither inherently good nor bad. They have been alternately portrayed as necessary evils for taming "Leviathan" city governments (Brennan and Buchanan, 1979; Craw, 2008; Downes and Figlio, 1999), or as just plain evils that stifle cities' abilities to pursue innovative visions for their futures (Frug and Barron, 2008).[13] However, over three decades after the tax revolt movement took hold in a major way in states such as California and Michigan, the widespread adoption of local TELs depicted in Figures 1 and 2 has had two overarching effects: the first is the loss of local revenues; the second is decreasing local reliance on property taxes.[14] There is little evidence to suggest that TELs, however, promote local fiscal sustainability. The reason is that local spending mostly goes unaffected by revenue limits (Dye and McGuire, 1997), particularly in the absence of state-imposed spending lids, which exist in only a small handful of states.[15]

In sum, the proliferation of state-imposed TELs has helped to create a national state-local fiscal system that is simply less conducive to local governments' abilities to fund their own activities.[16] States with more aggressive local TELs – such as Michigan, Colorado and California – hinder the revenue capacity of their local governments. This capacity is vital during even the most moderate of economic downturns because service demands tend to rise and state aid tends to drop. Revenue slack, however, was particularly vital during the most recent recession. In previous downturns, home prices mostly remained stable, thus steadying property tax revenues (particularly in relation to sales and income taxes). In the 2009 recession, property tax revenues, already slowed in certain states via state-imposed TELs, plummeted in simultaneity with state aid. The good news, as we illustrate below, is that a relatively small number of states impose such crippling revenue constraints from both ends: meaning states that both limit own-source revenue capacity while also providing far from vibrant levels of state aid. The bad news is that, for local officials who must operate within those state environments, even small declines in revenues can present tremendous budgetary challenges.

Mapping the Revenue Squeeze: Revenue "Carrot" and Revenue "Stick" States

As property tax revenues continue to erode as a function of state-imposed TELs and local governments have become more reliant on state aid, some observers have suggested that state governments have responded to their expanding role in local fiscal affairs by providing greater levels of intergovernmental revenues (Berman, 2003; Sokolow, 2000; Dye and McGuire, 1997b).[17] This reading of state-local fiscal dynamics is somewhat supported by comparing trends in average levels of state aid to local governments exhibited in Figure 1 and total revenue limit adoptions depicted in Figure 3. However, our data allow for a far more detailed look at how local revenue capacity is being affected by state policies for local governments within each of the lower 48 states.

Figure 5 depicts a rough state-level indicator of the severity of state restrictions on local revenue capacity. States for which our standardized measure of per capita state aid far exceeds our standardized measure of the severity of local revenue limits – such as Connecticut, New York, Massachusetts, New York, Rhode Island and New Jersey – are depicted in orange and labeled revenue carrot states. All else being equal, we would expect the revenue capacity of local governments in these states to be buttressed by their state context. As was pointed out above, a well-structured state aid environment increases the overall fiscal capacity of local governments and, according to Pagano and Hoene (2010, p. 260), can provide "a level of equalization and base support for municipalities that may lack other resources." Additional value to local revenue capacity stems from the fact that critical own-source revenues are

12 Many other provisions of both the Headlee Amendment and Proposal A are related to other parts of the state finance system, and a detailed examination of the depth of both laws would be a paper unto itself. We will discuss the impacts of these types of laws, generally and in Michigan, later in the paper.

13 To be sure, they are a frequent source of local consternation, particularly as fixed costs occupy a larger share of local budgets and demand for services – driven by postrecession unemployment rates, population changes and other factors – continues to rise.

14 Indeed, in many state contexts, forgone property tax revenues have at least partially been recovered via more regressive revenue sources – such as fees and, where allowed, sales taxes.

15 This is an important point that is often obscured by the frequent reliance on the TEL acronym (Tax and *Expenditure* Limits).

16 Amidst the national clamor for government austerity and fiscal responsibility, it is important to point out that these activities – particularly in the states that impose the most formidable set of revenue constraints, such as Michigan, California and Colorado – include essential local services such as public safety and infrastructure maintenance, which are critical functions of local government.

17 Greater local reliance on state aid does not necessarily mean that state officials have "anteed up," a point that, mainly because of data constraints, is too often overlooked.

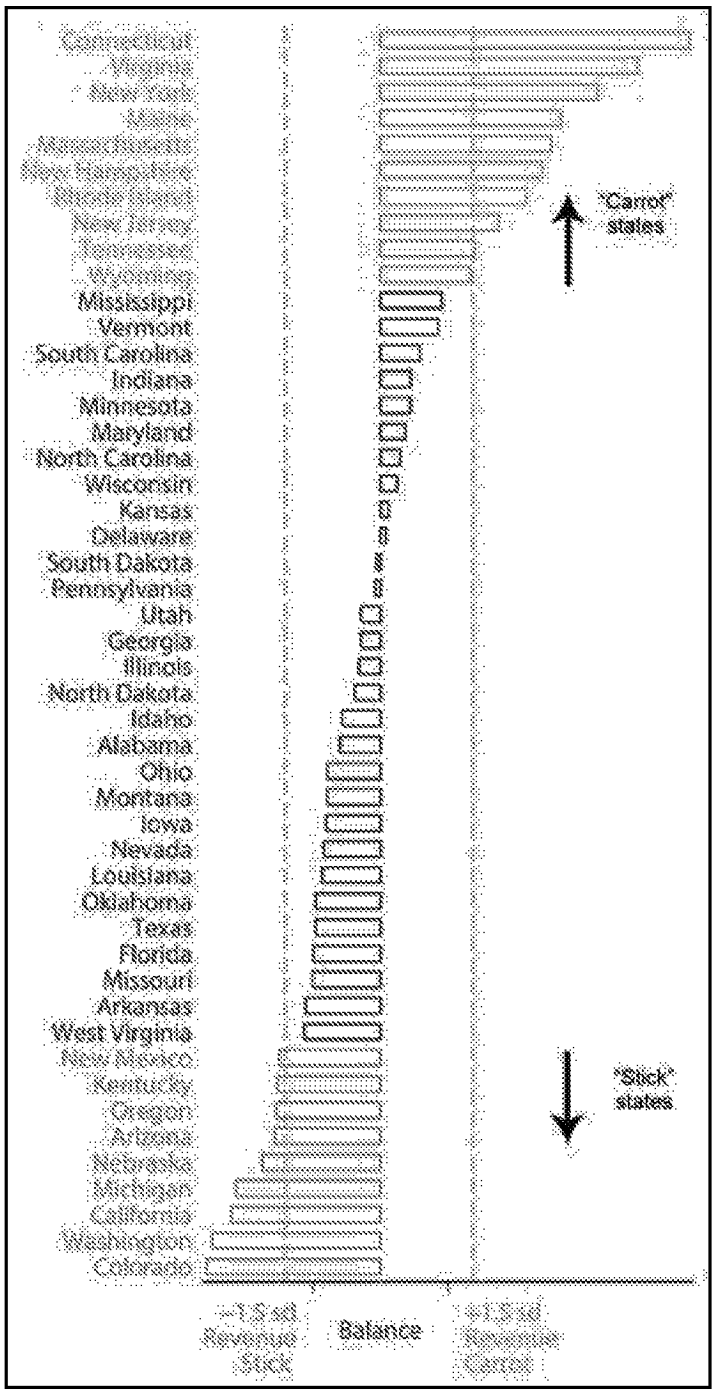
either altogether unencumbered by the absence of state TELs, as in Connecticut; limited only on the margins, as in Rhode Island or Tennessee; or limited via more aggressive TELs offset via significant funding from the state, as in Massachusetts.

Revenue stick states – such as Michigan, Colorado, Washington and California – are depicted in brown. These state governments (or state citizens via the referendum or initiative process) constrain the fiscal autonomy of local government officials rather than buttress it via state aid. An extensive body of research on the local effects of state-imposed TELs strongly suggests that revenue limits have worked: local own-source revenues have been reduced in the states that impose such limitations. Though there is some historical evidence that state legislatures in certain states have offset these limitations via state aid (Mullins and Joyce, 1996), revenue stick states tend to be far less generous in the allocation of intergovernmental revenue. All else being equal, we would expect the revenue capacity of local governments in these states to be constrained by their state context.

Michigan, for instance, has a TEL score well above the most recent annual state average, coupled with slightly below average state aid. The problem with local fiscal sustainability in revenue stick states such as Michigan stems from local governments' heightened reliance on state revenues, which in Michigan is a function of two large TEL ratchets and, in the post-Great Recession period, sharply declining property tax revenues. This high degree of dependency remains in place today. Yet, much like the way that Michigan's Proposition A has exposed critical local education funding to state budgetary battles (Cullen and Loeb, 2004), the state's unyielding property tax rate limits, coupled with special features of the Headlee Amendment that forbid the use of some alternative revenue sources employed in other states (e.g., income, sales and motor fuel taxes), have had the unfortunate side effect of essentially entwining local fiscal health with state legislative politics. As the state economy faltered under a one-state recession throughout much of the 2000s (Darga, 2011), the past decade has seen both clear declines in statutory revenue sharing and heightened levels of uncertainty over revenue-sharing rules (Lavelle, 2014, pp. 2-3).

Michigan's is a precarious fiscal context even for the most well-managed city government. It is particularly onerous for lawmakers in older, industrial cities such as Flint, which has been dealing for some time with sustained job and population loss, waning bureaucratic capacity, and increasingly daunting economic, social and physical challenges (see Doidge et al., 2015). In the words of one local official, if aid is reduced, "It's not rocket science ... pretty much raise taxes or cut services. That's what it boils down to" (McDermott and Powers, 2002, p. 12). Local lawmakers in a state such as Michigan, where they operate

Figure 5. Revenue "Carrot" and Revenue "Stick" States



with very limited discretion over revenue capacity, can boil it down even further: reduce or eliminate services or face the prospects of possible financial meltdown. All cities face political constraints on raising tax revenue. And certainly, some cities have managed their financial affairs in the face of economic decline better than others. However, for those seeking to fully grasp the nature of local fiscal health, we must continue to focus on ways in which states effectively create a mismatch between fiscal needs and available resources into their cities' local fiscal decision-making environment.

(2) Expenditure-side Pressures: Labor Costs and State Regulation of Local Public Employee Collective Bargaining

In addition to the revenue squeeze that some states impose on their local governments, state governments also impose a range of expenditure-side pressures that can drive up local costs.[18] As state governments continue to streamline bureaucracies and downsize operations, service burdens have been shifted onto local governments, often "without careful consideration whether this was the correct course" (Gold and Wallin, 1999, p. 73). As one prominent National League of Cities report argues (2003, p. 23), the transference of "program responsibilities from state and federal government, as well as the imposition of state and federal mandates, increase the roles and responsibilities of municipal governments, often without corresponding fiscal capacity or authority." Observers and analysts interested in the expenditure-side burdens that state policies place on local officials typically focus on the effects that costly mandates in areas such as health care and pollution abatement have on local government budgets (see Berman, 2003, pp. 77-83). Far less attention is paid to what we might call *de facto* spending pressures – the hidden but potentially damaging state-level decisions, policies and institutions that can destabilize local governments' fiscal capacity.

Consider, as we do in this report, local governments' large and increasing burden to pay for previously obligated labor costs. Labor costs, including wages and benefits for current employees as well as pensions and other postemployment benefits (OPEB) such as retiree healthcare, currently make up the largest category of operating costs for local governments. As pointed out in a recent MSU white paper (Scorsone and Bateson, 2013), municipalities were not required to measure the total costs of OPEB until an accounting standard was issued in 2004, with implementation beginning in 2007. Now that local governments have calculated and accounted for OPEB, many are faced with a massive commitment. Indeed, MSU's review of Michigan cities facing severe fiscal stress revealed that each city was confronted with a substantial unfunded OPEB liability (Scorsone and Bateson, 2013).

Though local government employee pensions and OPEB are seemingly always in the headlines, few seem to be asking why observers are more able to link labor costs to local fiscal distress in certain states than in others. Why do we hear so much about Michigan, Pennsylvania, California, Rhode Island and New Jersey? The answer, not surprisingly, is that, although city lawmakers are often criticized for overly cozy relationships with public employee labor unions (see, for instance, Gillette, 2014a; Rozansky, 2012; Greenhut, 2012), critical elements of employee benefit costs are structured by state law. State law may require bargaining by the employer, may provide only for a bargaining forum without requiring it or, alternatively, may simply prohibit collective bargaining altogether. State laws vary in the coverage of certain types of local employees. These rules address the types of items that may be bargained over, such as work rules, pay and benefits. Finally, the collective bargaining laws may include a process for dealing with impasses, such as binding arbitration rules. In line with the framework proposed at this report's outset, we view the mix of these rules as a set of processes and constraints that directly influence a municipality's fiscal capacity.

Table 1 places the local public employee collective bargaining environment of the contiguous 48 states into a five-category classification scheme ranging from very weak to very strong. (See the research approach appendix for a more detailed explanation of this measure.) As Table 1 makes plain, states vary with respect to the collective bargaining environment for local public employees. Not surprisingly, states with strong and very strong collective bargaining environments (e.g., those that impose a duty to bargain with strong union security provisions) have comparatively high union membership rates as well, with New York, Rhode Island, New Jersey, Connecticut, Massachusetts, California, Illinois, Oregon, Minnesota, Pennsylvania and Michigan each holding union membership rates in excess of 50 percent of state public employees. Unionization rates in weak and very weak states, such as Mississippi, South Carolina, North Carolina, New Mexico, Wyoming, Utah, Georgia and Virginia, on the other hand, tend to fall around 10 percent.[19]

State laws concerning pensions and health benefits illustrate, in part, how state-imposed structures affect city expenditure choices. Yet recent attention to employee compensation, pension system funding/underfunding and, especially, the cumulative impact of local government employee costs on current municipal cash flows have

18 This general phenomenon has been termed "second-order devolution" – meaning the transfer of program administration and/or substantive policy powers from the federal and state governments to America's cities and municipalities (see Bowman and Kearney, 2011).

19 Statistics from Union Membership and Coverage Database (see Hirsch and Macpherson, 2003).

brought these issues, in particular, into national focus. To be clear, we do not suggest that a non-unionized workforce is the key to a fiscally sustainable city. City governments must compete with other employers for workers, and rules governing bargaining are part of a state's larger labor culture. Our simple argument is that, in light of the sizeable role for local labor costs in local budgeting as well the implementation of new accounting standards, city governments operating within states with more permissive collective bargaining provisions are more likely to face budgetary constraints. It is easy to pin these constraints on lousy decision making, yet these constraints owe much to higher labor costs and the cumulative costs of payment decisions that are, to a large degree, governed by state policy.

(3) The State Context for Local Fiscal Distress: Tension Between Revenue and Expenditure Pressures

Analysis of the interplay of revenue and expenditure pressures allows for a more detailed assessment of the nature of the fiscal context in which states place their local lawmakers. We offer this analysis as something of a corrective to the typical perception that a city's financial destiny is either entirely within or entirely outside of its control. When assessing why certain local governments seem to respond more effectively to their financial problems than others, our research suggests that identifying on Figure 6 (see page 14) the state in which the city is located is a good place to start. The state's coordinates represent an empirical measure of the state context for local fiscal distress – meaning the tension for local lawmakers between state-imposed revenue-side pressures (captured on the horizontal axis) and state-imposed expenditure-side pressures (captured on the vertical axis).[20]

20 More technically, the horizontal axis captures our measure of the revenue pressures that states inflict upon their local governments (standardized TEL severity score minus standardized average per capita aid score). The vertical axis represents a standardized measure of public employee union coverage, an approximation of the severity of the average city's relatively fixed labor costs. The light gray shading represents the distance between one quartile above and one quartile below the median; thus states that appear outside these two intersecting ranges are quite different from average on both elements of the state context. Dark shaded points indicate state governments that authorize state intervention in financially distressed local governments.

Table 1. State Collective Bargaining Environments for Local Public Sector Employees

Collective bargaining environment	States		Brief description
Very strong	Illinois Minnesota Montana Ohio	Oregon Pennsylvania Vermont Wisconsin	Duty to bargain Strong union security provisions Strikes are permitted with qualifications
Strong	California Connecticut Delaware Maine Massachusetts Michigan	New Hampshire New Jersey New York Rhode Island Washington	Duty to bargain Strong union security provisions Strikes are prohibited
Moderate-mix	Florida Idaho Iowa Kentucky	Nebraska Nevada Oklahoma South Dakota	Some bargaining rights Weak union security Strikes are prohibited
Weak	Arizona Arkansas Indiana Kansas Louisiana Missouri	New Mexico South Carolina Texas Utah West Virginia Wyoming	Limited collective bargaining rights Right to work Strikes are prohibited
Very weak	Alabama Colorado Georgia Maryland Mississippi	North Carolina North Dakota Tennessee Virginia	Collective bargaining is prohibited Right to work Strikes are prohibited

Figure 6. Assessing the State Context for Local Fiscal Distress

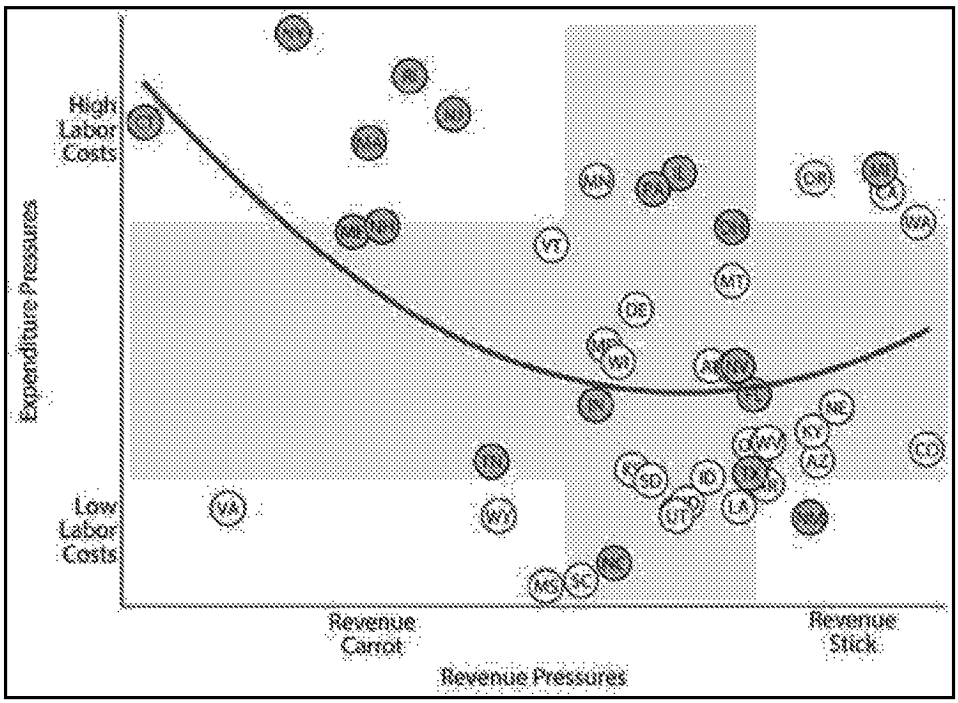


Table 2. Tabulating the State Context for Local Fiscal Distress

State-Imposed Expenditure Pressures	State-Imposed Revenue Pressures		
	Carrot	Balance	Stick
High	Connecticut Massachusetts New Jersey New York Rhode Island	Illinois Minnesota Pennsylvania	California Michigan Oregon Washington
Moderate	Maine New Hampshire Tennessee Vermont	Alabama Delaware Florida Indiana Iowa Kansas Maryland Montana Nevada Ohio Oklahoma Wisconsin	Arizona Colorado Kentucky Missouri Nebraska West Virginia
Low	Mississippi Virginia Wyoming	Georgia Idaho Louisiana North Carolina North Dakota South Carolina South Dakota Texas Utah	Arkansas New Mexico

If state-imposed revenue pressures increased with the severity of expenditure pressures, or vice versa, we would expect a positive "best fit" line (the dark curving line in Figure 6) moving from the lower left-hand quadrant to the upper right. As one might expect (or at least hope), these two elements of the state context tend to offset each other. States such as Colorado and New Mexico – i.e., more revenue stick states (local tax limitation increases outpace growth in the distribution of state aid) – avoid equally exacting expenditure-side pressures, at least when it comes to local labor costs. For states that do structure local collective bargaining in a way that favors higher local labor costs – such as New York, Connecticut and Rhode Island – these costs are at least partially offset by a more resilient and vibrant aid environment, coupled with limited own-source revenue restrictions.

The relationship between these two elements of the state context is negative, but it is not a purely linear relationship. Figure 6's most striking feature is its illustration that states placing extreme limitations on local revenue capacity (meaning they are more than one standard deviation above the state average on the horizontal axis) also tend to impose costly labor and service obligations (more than one standard deviation above the state average on the vertical axis). This relationship between revenue and expenditure pressures creates a best-fit line that resembles a backwards "J". This small handful of states that pull the line upward – which include Michigan and California – cluster in the upper right-hand quadrant of Figure 6. It is no surprise that acute financial emergencies have clustered in these states. We contend that they have structured local fiscal policymaking in a way that effectively incubates financial distress. Table 2 classifies the states in an effort to clearly represent the position of each of the lower 48 states along these two dimensions.

The threat of recurring structural deficits is "baked in" to the state-imposed legal and policy context in which local governments choose how to respond to fiscal problems. For lawmakers in America's older, industrial cities who must operate within these states, that choice is often not theirs to make. As we point out above, these states apply revenue and expenditure pressures on the front end, while also fostering a fiscal environment that exacerbates fiscal stress, links local fiscal health to budgetary battles, and all in all restricts the policy "space" for local fiscal policymaking. Michigan, however, is the only state among the incubators in the top right quadrant of Table 2 and Figure 6 that also intervenes "on the back end" by assertively implementing one of the nation's most powerful fiscal distress intervention policies (Anderson, 2011; Scorsone, 2014).

In light of the clustering of distressed localities within Michigan's borders, it comes as little surprise that Michigan lawmakers would value a policy that allows state officials to help struggling local governments meet conditions of chronic fiscal stress (Scorsone and Bateson, 2011; Doidge et al., 2015). However, as we discuss below, what is quite striking is the relationship between the policy's goals and design – which favors state takeover of local government – and the nature and underlying causes of the problem of acute fiscal distress. The financial consequences of deep-rooted economic and social forces are unlikely to be fully alleviated via temporary suspension of local self-government. Neither are the often overlooked but critically important state-imposed causes analyzed above. In what follows, we survey the state governments with more holistic and self-aware views of local financial distress in an effort to draw important lessons for Michigan lawmakers as they continue to struggle with chronic fiscal stress among the state's localities.

Section 2: If Takeover is the Solution, then what is the Problem? What Michigan Can Learn from the Ways in Which Other States Tackle Problems of Local Fiscal Distress

In the previous section, we make the case that state governments influence how local officials meet their financial problems via a combination of laws and policies that add or take away intergovernmental or own-source revenue capacity and drive up expenditure pressures via the allocation of policy authority over government functions and labor costs. In certain instances, such as when a state government caps property tax revenue and sets near insurmountable override standards, the effects of certain elements of the state context may be more or less direct. A city facing a near identical set of political, institutional, economic and social circumstances that operates in a neighboring state with no such revenue cap at least has the potential to capitalize on this capacity, assuming local political and economic constraints allow for the imposition of a property tax increase. But mostly the effects of this state context are more indirect. The policy balance between revenue restrictions and state aid, for instance, is not so much a direct measure of state policy choice as it is an outcome of a variety of state policy choices – e.g., revenue-sharing rules and formulae, the outcomes of citizen initiatives involving local TELs, legislative-executive budgetary processes, bureaucratic turf battles and so on.

Since as far back as the late 19th century, when the proliferation of railroad bankruptcies prompted states to take action to assist struggling localities (see Dimock, 1935 and 1940), state lawmakers, for fear that "a failing municipality will lower the credit rating of other localities and the state itself" (Berman, 2003, p. 113), have played a far more direct role in responding to local financial distress. The current menu of state policy options for intervening in distressed communities has been reviewed in two recent reports, one by Pew Charitable Trust researchers (Atwell et al., 2013) and a second by one of the authors of this report (Scorsone, 2014). One key shortcoming of these reports is the absence of detailed consideration of state context. Simply put, some states are part of the problem – they incubate financial distress via stringent restrictions on local revenue capacity and state policies precipitating local spending pressures. In other states, local policy options regarding the balance of revenue and expenditure flows are less encumbered by state policies and institutions. This diversity among state contexts is particularly important when reflecting on "best practices" for states dealing with acute local fiscal distress. For instance, close followers of issues of local finance often hear and read about North Carolina's strong oversight and monitoring mechanisms as standards to which state governments should aspire (see, for instance, Mattoon, 2014). But does it make sense for a state such as Michigan or New Jersey, for instance, to adhere to similar policy principles when local fiscal policymaking is structured in such dramatically different ways?

A second shortcoming of these reports is the dearth of detailed comparison among the 18 state governments that currently have an intervention policy. We refer readers to these reports for their quality in cataloguing the formal policy powers of state lawmakers on paper. Neither, however, is as useful at considering these policies in practice. This is a key tension in policy analysis generally and in instances of intervention in particular. The choice of the state's appointed and elected officials to employ the power they have at their disposal and intervene in a distressed community (often meaning the temporary suspension of democratic processes) presents a particular type of implementation dilemma imbued with questions of racial bias, social and economic imbalances, and the legal and political culture that guides state-local relations.

To fully assess the role of state governments in financial distress, we held a workshop for state government officials, analysts and experts with deep knowledge of state operations in local financial affairs. The Workshop on State Intervention in Distressed Communities, held in the fall of 2014 in Detroit, ultimately brought together a diverse group of 28 practitioners and policy experts from six states facing similar sets of local fiscal problems: Michigan, Rhode Island, New Jersey, Pennsylvania, New York and Ohio.[21] The appendix provides a detailed overview of the structure of the event and the types of discussions that were held.

Our primary goal was to provide a venue facilitating the open exchange of ideas and techniques for approaching the complicated problems facing cities in fiscal crisis. Indeed, as we discuss below, one recommendation of this research

21 This portion of the process focused specifically on how states approach intervention. Though many of the participants in the workshop were intimately involved in making decisions at the city level, we intentionally chose participants representing the state perspective rather than that of local decision makers.

report is to continue to advance this and similarly minded endeavors as a means of facilitating what Peter May (1992) refers to as "instrumental policy learning," which can improve state officials' understanding of the benefits and limitations of particular policy approaches or administrative designs. A second goal centers on learning more about the states' implementation processes for deciding whether to designate a city in distress, take it over temporarily or, in the most extreme cases, help shepherd its path to municipal bankruptcy. Our final goal was to investigate the types of "causal stories" (Stone, 2011) that state officials and experts used when considering the fiscal conditions facing their local governments. We held structured discussions about how the problem of local fiscal distress is defined (i.e., who or what bears the responsibility) and the ways in which state governments enshrine this problem definition via the design and implementation of financial emergency policies.

In what follows, we begin with a brief outline of Michigan's approach to local financial emergencies, paying special attention to linkages between the state's policy solutions, the nature of fiscal stress in Michigan's municipalities and the "front-end" context identified in Section 1. We then turn to alternative approaches employed in other key states. We begin with North Carolina, a state whose Local Government Commission, which administers the policy for dealing with financially challenged communities, has received a great deal of national credit. We then move to states facing more comparable sets of local conditions – i.e., with many older, industrial and fiscally vulnerable local governments suffering from population and job loss – that also have a history of state intervention in fiscally distressed communities. The goal here is not comprehensive overview. Rather, we set out to identify key dissimilarities with the new generation of intervention policies – of which Michigan's current policy is the poster child – and to illustrate how state governments facing similar sets of challenges can more effectively align their policy regarding direct involvement in fiscally distressed communities with the nature of problems that these communities face, as well as with state-imposed constraints that hamper their capacity to balance revenue and expenditure flows.

We designed Table 3 (see page 18) to help guide this discussion. The first two columns summarize the state context analyzed in Section 1 of this report. The four rightmost columns depict information summarizing the design and administration of the state's local financial emergency policy. The column labeled "causal story" reflects our assessment of how a state government, via its legislation of state intervention, comes down on the debate over the causes of local financial failure. For some states, the focal point is internal causes – poor management, the incompetence of local leaders, political corruption, the dominance over policymaking by narrow interests, and/or "antidemocratic" structures and processes that favor the whims of local officials over the needs of local residents (Gillette, 2014b). Other states focus on forces external to local management – i.e., socioeconomic conditions that are at once causes and symptoms of diminishing local service capacity and resources (see Kimhi, 2008), such as high and concentrated poverty, older building stocks, residential vacancies, high crime, deep-rooted regional changes, population loss and job loss. The column labeled "policy approach" captures the gist of the state's approach to financially distressed communities and reinforces the causal theory behind the policy's design. We also include information on the administration of the states' policies. Here the focus is on the powers of key administrative actors and their bureaucratic location. In line with a great deal of research on policy analysis and the policymaking process, we structure Table 3 in a way that suggests that key state decisions on goals, administration and implementation flow from how responsibility for the problem is assigned – i.e., the causal story (see Stone, 2011, p. 206). This information is provided for the six states that were represented at the Detroit workshop – Michigan, Rhode Island, New Jersey, Pennsylvania, New York and Ohio – as well as for North Carolina, a state that frequently gains attention for the effectiveness of its intervention policy.

(1) Michigan's Local Financial Stability and Choice Act: A Brave New World for State Intervention

The tenets of Michigan's intervention policy have been well-documented in research reports and news media. After the governor declares a fiscal emergency,[22] four possible courses of action are available to a municipality,[23] though local takeover by an emergency manager (EM) is the most common course of action. This allows a state-appointed manager to "act for and in the place and stead of the governing body and the office of chief administrative officer of the local government" and effectively grants this individual powers beyond those available to local officials.[24] Not only does he or she become responsible for all local fiscal decisions, including development and implementation of a recovery plan (which must be approved by the state treasurer), but the EM can also modify existing collective bargaining agreements, negotiate new union contracts and make personnel changes. The EM can also explore the option of consolidating services with another government entity, sell municipal assets and ask voters to increase the tax rate. The EM remains in this role until the city reaches certain benchmarks within its recovery plan, and a

22 A series of triggers are in place and one must occur – e.g., failure by the local unit of government to pay creditors or make timely pension contributions – prior to a state review of a local unit's finances

23 Consent agreement, emergency management, neutral evaluation or municipal bankruptcy.

24 141.1549, Sec. 9.

Table 3. Intervention Policy in the Context of State-Local Fiscal Relations

State	State Context		Local Financial Emergency Policy			
			Design		Administration	
	Revenue Pressures	Expenditure Pressures	"Causal" Story	Policy Approach	Agency/Govt. Branch	Responsibilities
Michigan	Revenue stock (top 5%)	High (top 20%)	Management (internal)	State-appointed manager furnished with broad tools to restore solvency (mostly on spending side) once distress occurs. Michigan typically does not intervene in local fiscal affairs until a fiscal emergency is recognized. There is no program of prevention.	Governor Department of Treasury (Office of Fiscal Responsibility)	Declaration of financial emergency and appointment of powerful emergency manager. Monitor emergency management process and approve certain decisions.
New Jersey	Revenue carrot (bottom 10%)	High (top 5%)	Socioeconomic factors (external) Management (internal)	Support distressed communities. When/if cities enter distress, the state makes available monetary and technical assistance.	Department of Community Affairs (Division of Local Govt. Services)	Monitor and approve local budgets, certain debt and capital investments; approve of additional aid; advocate for local government interests.
New York	Revenue carrot (bottom 5%)	High (top 1%)	City specific	Generate city-specific solutions. The legislature designs and enacts a specific policy for each city in distress. Prevent distress from occurring. The comptroller's office has designed an extensive monitoring system, staffed by many state auditors, to help local officials stave off financial emergency.	Legislature Office of the State Comptroller Governor	Legislate and adopt city-specific legislation, including establishing local control board. Preventive monitoring of all local budgets and administration of fiscal monitoring system. Appoint local control board.
North Carolina	Balance/lean carrot (bottom half)	Low (bottom 5%)	Management (internal)	Central control prevents distress. North Carolina has a highly centralized system designed to prevent risky decision making and borrowing by municipalities.	Department of Treasury (Local Government Commission)	Review audits, monitor local fiscal health, approve and settle local debt issues, require remediation plan.
Ohio	Balance/lean stick (top 40%)	High (top 25%)	Management (internal)	Support local control. Ohio intervenes at the request of local officials; recovery plans are submitted by local officials.	State Auditor (Local Government Services Division)	Train local officials, audit local budgets, classify distressed communities.
Pennsylvania	Balance (bottom half)	High (top 20%)	Socioeconomic factors (external) Management (internal)	Helps troubled communities "help themselves." Even in receivership, aims to address causes and prevent relapse, though communities may be unable to exit the state process because of systemic barriers.	Dept. of Community/Econ Development (Center for Local Government Services)	Place cities under receivership, distribute financial aid to distressed cities, monitor fiscal status of cities.
Rhode Island	Revenue carrot (bottom 15%)	High (top 5%)	Management (internal)	Restore solvency and prevent further decline once distress is imminent. Rhode Island has a strong receivership policy. It also offers additional assistance to cities approaching distress to help prevent full-fledged crisis.	Department of Revenue (Division of Municipal Finance)	Monitor all local governments, aid governments in or at risk of distress, appoint receiver.

receivership transition board is appointed by the governor to assist in transition until the official termination of receivership.

The structure of Michigan's successive intervention laws and the powers granted to the emergency manager point to a particular type of causal story – local government mismanagement as the chief barrier to fiscal solvency. The state's solutions and assistance all center on correcting local decisions that led to chronic budget shortfalls, and the main focus of Michigan's law, which is administered by the Department of Treasury, is to ensure a balanced budget. Efforts to achieve short-term fiscal solvency typically center on reductions in cities' financial obligations – e.g., cutting pension obligations, making personnel cuts and contracting out services traditionally provided by local governments. EMs and other state officials have little leeway to affect the revenue side of local governments' ledgers. As Anderson (2011, p. 620) argues, the viewpoint being expressed by the design and implementation of Michigan's policy is "that the current revenue picture of the city is adequate to provide for public safety, debt service, and other core expenses—if only ... the city had competent management." Indeed, little or no financial support accompanies state takeover. This is a telling feature of the state law that sheds considerable light on both the degree to which the policy oversimplifies the causes of local fiscal distress and the mismatch between the administrator's toolkit and the nature of the problem.

To respond to the question at the outset of this section: if takeover is the solution, the problem is mismanagement. Michigan codifies this causal story in a way that is less adulterated than in any other state we have surveyed. In other words, the state has adopted and codified a vastly oversimplified story. Even Rhode Island, which granted similarly sweeping powers to its state-appointed emergency managers, offers additional assistance to cities approaching distress to help prevent full-fledged crises. The state has also seen EMs (called "receivers") raise local taxes to generate more local revenue. This less than favorable assessment of Michigan's policy is buttressed by the absence of emergency bailout funding, a traditional feature of the more aggressively implemented state intervention policies (Berman, 1995; Anderson, 2011), as well as meager revenue-raising powers. EMs are empowered to tackle city expenditures as a means of bringing local budgets into equilibrium, but revenue-raising powers are effectively more limited than the powers normally afforded a city's mayor or council member. As has been pointed out elsewhere, for cities such as Flint, Ecorse, Benton Harbor and Pontiac, this is a gross oversimplification of the structural barriers to fiscal sustainability (Doidge et al., 2015). Our aim in this report is not to disprove the notion that mismanagement is the cause. We merely point out that the policy's design and implementation features devalue the considerable constraints that the state places on the revenue capacity of local officials.

(2) The Limited Applicability of "Best Practices": Why Adoption of North Carolina's Policies Won't Work for Michigan

The reentry of Michigan's cities into emergency management and the number of local governments and school districts in trouble have led to suggestions that Michigan should look elsewhere for answers.[25] A Pew Center on the States report suggests that North Carolina's monitoring system has prevented fiscal distress despite a history of crises during the Great Depression and some of highest unemployment rates in the country (Pew Charitable Trusts, 2013).

The Local Government Commission, a division of the North Carolina Treasury Department, reviews cities' independent audits on key fiscal health indicators, particularly the level of fund balance. If a locality fails to meet a specific threshold, it is placed on the commission's watch report and required to submit a plan of improvement. If local officials are unable to return the municipality to an acceptable level on their own, the commission assumes control of all local financial decisions, including taxing issues, until the problem is corrected. Additionally, the commission approves and sells all local bonds for public structure investments, which both increases the level of state oversight and reduces the potential for local mismanagement of debt. Bond agencies assign a premium to this monitoring system, considering it a model system (Coe, 2007).

Features of North Carolina's approach provide intriguing options for Michigan lawmakers, such as a codified, professional state office and extensive front-end monitoring to identify potential crises. However, evaluating these policies in isolation – i.e., in the absence of key contextual factors – is likely to overstate the potential success of North Carolina's policies if they were to be enacted in Michigan.

For instance, according to the U.S. Census Bureau, in 2007, North Carolina had 548 municipalities, no other local general-purpose governments and 100 counties; Michigan had 533 cities and villages (municipalities), 1,242 townships and 83 counties. A consequence of Michigan having three times as many local governments as North Carolina is that the volume of reports that would need to be reviewed for monitoring purposes would be three times as great.[26] Certainly this would require more resources devoted to oversight at the state level, thus putting additional stress on the state budget.

The states differ greatly on other dimensions of the elements of state context identified in Section I. North

25 http://www.crcmich.org/PUBLICAT/2000s/2000/memo1053.pdf.

26 This does not include the additional resources that would be required to monitor school districts, special districts or other governmental units.

Carolina has an obligatory state pension system; Michigan does not. In 1947, North Carolina declared it illegal for local governments to bargain with unions.[27] Conversely, Michigan's local governments have a strong history of collective bargaining and excluded police and fire unions from 2012's right-to-work legislation. Tax and expenditure limits, when averaged from 1970 through 2005, rank Michigan as the third most restrictive state in limits placed on local governments. North Carolina is 38th – a property tax rate limit on counties and municipalities, set in 1973, has remained its only TEL.

The differences in the state policy context between the two states suggest that Michigan should be cautious when drawing lessons from North Carolina as its model for intervention policies. We attribute North Carolina's success in preventing municipalities from entering distress not to the design of its specific intervention policy but rather to a much tighter link between its policy approach and the state-imposed context for fiscal distress.

(3) Rebuilding State-Local Partnerships: Key Insights from Rhode Island, New Jersey, Pennsylvania, New York and Ohio

One of the more striking findings to emerge from our workshop and subsequent research is the difference between Michigan's approach to local fiscal distress and the approaches of comparably situated state governments. These differences are laid bare in Table 3. Plainly put, state policies and institutions effectively incubate budgetary imbalances; yet lawmakers and administrators have ignored potential front-end damage when designing the policy aimed at helping communities in distress. Rhode Island, the state most comparable to Michigan in the priorities of its intervention policy and the powers granted to state receivers, also provides financial assistance to municipalities most in need, targeting aid to communities with a high property tax burden relative to taxpayer wealth through the state's Distressed Communities Relief Fund thus buttressing the revenue capacity of its local governments.[28] With respect to this specific aspect of state context, Rhode Island generally provides higher levels of state aid.

New Jersey and Pennsylvania: A More Comprehensive View of Local Financial Failure

Beyond Rhode Island, Michigan lawmakers have a variety of states from which to learn about the viability of policy alternatives. New Jersey and Pennsylvania have enacted receivership laws that are quite different than Michigan and Rhode Island. Internal mismanagement is not eschewed entirely; rather it is considered alongside the external, structural dynamics with which local lawmakers must contend. This more holistic causal story both reinforces and is reinforced by choices that these states have made regarding implementation and administration.

New Jersey's policy of assisting cities during times of financial crisis originated in the Great Depression. Since that time, the state has built support within its bureaucracy to review and approve city budgets and offer financial and technical assistance as needed to prevent cities from entering bankruptcy. Rather than appointing a state-level official to take charge of a city`s finances (such as an emergency manager in Michigan),[29] New Jersey seeks to assist local officials in alleviating distress. This partnership is reflected in the mission statement of the New Jersey Division of Local Government Services (DLGS), a division of the Department of Community Affairs. It states that the DLGS "serves as an advocate for local Government interests," provides assistance and is responsible for "financial integrity." The DLGS provides advisory services to local governments, both once the community is identified as distressed and on request of the municipality, and also licenses and educates local officials.

Not surprisingly, these two services help establish a partnership between state and local officials independent of the financial position of the municipality. The state requires that all local government budgets and certain financing and purchases be approved by state agencies.[30] The budget review is conducted by department staff members (many hired short-term annually) and is made easier for local units of government by state-provided training and consistent reporting requirements. When these preventive actions fail to ward off systemic financial issues, the state begins a more involved intervention. The community is first placed on a watch list, at which point the state generally channels additional monetary aid to the struggling government. The state also uses its Qualified Bond Act Program, which requires state approval to bond or make capital expenditures, to ensure stability and prevent default. This program can capture and stall state aid for payment of debt services. At the same time, DLGS offers technical assistance to cities to help them solve underlying problems that contribute to fiscal distress.

The most notable example is the consolidation of the Camden police force in 2010. The mayor terminated the entire city police force and contracted with the county to provide those services, with the guidance and support

27 N.C. Gen. Stat. 95-78 to 84 (http://www.nrtw.org/right-work-states-north-carolina).

28 Established in 1990. Municipalities that fall in the bottom 20 percent of three of the law's four indices qualify to receive state aid under the law. In the 2014 fiscal year, seven municipalities received funding through this legislation, a total of $10.4 million

29 Until recently, when Atlantic City was declared to be in fiscal distress and an emergency manager was appointed.

30 Procurements over $5 million must be reviewed by the comptroller, and those over $10 million must be directly approved.

of state officials.[31] Camden illustrates the cooperative efforts of various levels and sectors of the state and local governments. It highlights that preventive efforts to maintain or restore fiscal sustainability are not always sufficient, but that a collaborative approach can assist cities and the state through difficult political decisions. New Jersey's approach indicates that the state views itself in partnership with local governments, with a responsibility to provide a check on risky financial decisions but also to provide ongoing financial assistance to struggling communities.

In contrast to New Jersey's hesitance to use direct state control, Pennsylvania's Act 47 allows the state to place fiscally distressed communities in receivership under the direction of the Center for Local Government Services in the Department of Community and Economic Development. Once a municipality has been placed under receivership, local government officials must have the majority of their decisions confirmed by the receiver, and the receivership board may implement cost-saving or revenue-raising strategies unavailable to local officials. The board has the ability to raise taxes above the legal maximum but has no additional powers in collective bargaining. Principally, the receiver acts as a liaison between the local government and others to improve the financial integrity of the city and is typically able to broker additional state funding for the distressed community. In Harrisburg's recent financial descent, for instance, the receiver was able to facilitate $25 million of revenue to fund a non-profit that would provide infrastructure and economic development.

Receivers in Pennsylvania tend to take a comprehensive view of local financial difficulties as they work with the state to look for alternative partnerships and unique revenue-enhancing and cost-sharing schemes. Proposed financial recovery plans often include recommendations that will improve local governments' economic positions in the future. This approach extends through the process of recovery. It requires more research, more interactions and coordination between parties, and more time to allow for business adjustments and industrial reorganization. Furthermore, it includes a period of weaning cities off the additional funding to which they had access during their most trying times. To officially exit Act 47, cities must follow an extensive process that includes hearings and the department director's signature. As a result, Pennsylvania has had only seven of 28 distressed communities officially conclude the process. Allowing cities to remain in a system with additional structure and support illustrates Pennsylvania's acknowledgement that factors outside of local control contribute to fiscal issues, and that the state has some role in providing additional support.

In all, intervention policies in New Jersey and Pennsylvania are administered by state agencies dedicated to working with local governments. State personnel are involved with municipalities well before distress, and they have resources and authority to assist municipalities. Though administrators are afforded the statutory authority to assume greater control over city finances, this is not the only facet of their relationship with local governments.

New York and Ohio: The Benefits of Monitoring

Similar to New Jersey and Pennsylvania, New York has established a system that supports state and local cooperation and information sharing. As local fiscal crisis deepens, the state becomes more involved in local political and operational affairs. The state's policy approach to local fiscal emergencies is ad hoc\ (rather than multijurisdictional), allowing lawmakers to survey the specific causes of distress for a given community and legislate solutions in line with these problems.

As is well-documented, New York's history of fiscal intervention begins with New York City's near bankruptcy in 1975. Naturally, a crisis of that magnitude spurred state action, but since that time, New York has not been plagued by chronic distress. This is due in part to cities' ability to increase revenues without legal restriction (until 2014, when the state imposed a cap on property tax increases). Additionally, many New York communities have avoided the economic peril that results from a loss of major industries and subsequent economic restructuring.[32] This history is evident in the state's view of municipal distress as an unusual and unique instance that requires customized solutions. New York provides gradual intervention and individualized approaches to distress, with the decisions and the process supervised by state elected officials – the governor, the legislature and the comptroller.

In addition to customized intervention approaches to distressed cities – which could violate the constitutions of states that disallow special legislation – New York is also heavily involved in monitoring the fiscal position of its local governments. The state's Local Government and School Accountability (LGSA) unit of the Office of the State Comptroller operates the Fiscal Stress Monitoring System, which reviews annual financial data of local governments to determine whether each government is facing significant, moderate or probable fiscal stress. Municipalities must submit audit reports, which are reviewed and in some cases conducted by approximately 200 auditors.[33] From annual reports, budgets and audits, the LGSA creates local fiscal measures for benchmarking, trend analysis and

31 Returning to the role of other state policies in distress solutions, this action would not have been possible without particular provisions within union and employee contracts that allowed for such termination of individual employees.

32 Buffalo was an exception and did necessitate intervention proceedings. It should be noted that Buffalo is one of only four New York local governments responsible for operating its own school district.

33 These 200 employees review audit reports of school districts and other local governments as well as municipalities.

general monitoring over time and across local government types. State auditors are also deployed to work with local governments. As a result, state officials may use knowledge of community nuances in evaluating local deviations from sound fiscal indicators and state trends. Such specialization is particularly useful as state intervention becomes necessary.[34]

If a local government is identified as financially unsound, the state must pass special legislation to institute a local control board for the municipality to engage in the formal intervention process. After a local control board is created, primary authority over the struggling municipality is transferred from the comptroller's office to the governor-appointed board.

Each board, by the nature of the process, has different powers. Previous boards have overseen proposed local budgets and set personnel policy, and were granted the final authority to initiate bankruptcy proceedings.[35] That the boards have had no additional taxing authority, ability to renegotiate previous collective bargaining agreements nor authority to make unilateral budget decisions reflects the state's emphasis on local autonomy.

The boards have been particularly useful in coordinating intergovernmental solutions. For instance, the Buffalo Fiscal Stability Authority (BFSA) was established in 2003. It helped Buffalo manage its additional school district responsibility and restructured the city's pension and health insurance plans by joining the respective state-level systems. Finally, the BFSA brokered an arrangement for city parks to be managed at the county level and for 16 libraries to close. Despite the local knowledge and intergovernmental efforts, it took nearly nine years for Buffalo to exit receivership and for the BFSA to transition into an advisory role. Policy specifies that the BFSA will serve in this role until 2037, and the city may revert to full receivership if financial indicators show distress.

At the state level, New York vests its relationship with local governments and the power to intervene in elected officials – the governor, the comptroller and the legislature. This separates the state's ongoing monitoring from its intervention, and though it raises the legislative barrier to intervention by requiring the crafting and passage of legislation, it also provides public accountability and a system of checks and balances. The ability to draft city-specific solutions allows New York to address management issues, economic conditions and the impacts of the state context in different ways in each city, ideally assisting the community to long-term stability.

Ohio, like New York, faced a fiscal crisis in its largest city in the 1970s. Cleveland's default on short-term notes in 1978, which made it the first municipality to default since the Great Depression, led Ohio to develop a comprehensive policy designed to prevent and, if necessary, intervene in distressed cities (Pew Charitable Trusts, 2013; Levine, Scorsone and Justice, 2013). No municipality has defaulted since Cleveland, but Toledo, East Cleveland and other municipalities have entered fiscal emergency status, particularly once the Great Recession exacerbated declining revenue bases and expenditure pressures.

Ohio's Local Government Services Division, located in the state auditor's office, is responsible for training local officials and auditing local budgets. Chapter 118 of the state code,[36] which deals with local fiscal emergencies, grants the Local Government Services Division (the auditor) responsibility for categorizing distressed communities for fiscal caution, fiscal watch or fiscal emergency. The categorization system signals to local officials, bondholders and other stakeholders the extent of the local government's fiscal stress and the ease of financial recovery anticipated. It serves as a useful continuum of distress, recognizing that failing to pass one indicator of financial soundness may not require the same actions as a community failing multiple triggers. Each category has an increasing level of oversight (i.e., requirements for audit depth and financial plan proposals). Once fiscal emergency is declared, an advisory board is created.

Under all three distress categories, local governments are required to submit recovery plans to the Local Government Services Division. If a local government is not compliant with its recovery plan, the only penalty is movement to a higher designation of fiscal distress. It is not until a municipality reaches the fiscal emergency status that penalties are imposed.

As part of the fiscal emergency proceedings, municipal officials must submit a recovery plan to the recovery board for approval. If a plan is not submitted or the local government fails to adhere to a plan, the Office of Budget and Management is supposed to suspend all state funding to that municipality,[37] though this penalty has never been fully enforced.

34 Ultimately, any distressed community implements solutions that are specific to its condition. A universal policy prescription is to reduce expenditures. However, no universal prescription can be made on what account specifically should be limited and in what way. Knowledge of exact inefficiencies, redundancies, slack and so forth is necessary to act. If outside agents are to advise on such actions, their already having some knowledge of the particulars of the city will allow for more expedient and implementable recommendations.

35 Control boards are not granted this authority for New York City.

36 The other elements comprising the law became effective, were revised or added in 1996, 1999, 2001 and 2002 – http://codes.ohio.gov/orc/118 (pdf). The state's approach is consistent with the autonomy allowed Ohio's local governments. Section 118.02 (B) of the state code states that, "[t]he intention...is to enact procedures, provide powers, and impose restrictions ...while leaving principal responsibility for the conduct of the affairs...in the charge of its duly elected officials." The effort to maintain local autonomy is demonstrated by the fact that the review process of the Local Government Services Division is initiated by request of local officials as well as at the suggestion of auditors.

37 Although individuals receiving direct state welfare within the community's borders continue to do so.

Ohio, like other states, struggles with assisting communities to achieve permanent fiscal stability. The city of East Cleveland was under fiscal emergency for 18 years. Exiting the process failed to mark long-term sustainable success – East Cleveland was once again placed under fiscal emergency. In late 2014, it was considering entering into bankruptcy proceedings,[38] and the city's mayor filed a petition seeking a merger with the city of Cleveland in the summer of 2015.[39]

Ohio, like Michigan, illustrates the issues that arise when a state's solution (intervention policy) does not match the causes of distress (context). Local officials retain control of decision making and the plan to resolve distress, but they and the state agency responsible for intervention lack the authority or resources to address the root causes of distress or to circumvent the pressures that the mix of state policies adds to local fiscal policymaking processes.

Section 3: Conclusions and Recommendations

In the previous sections we identified the ways that broad state policies limit or enhance the local governing options and the ways that states with intervention policies match their approach to local financial distress with the reality of city operating environments. Here we conclude our analysis with conclusions and practical recommendations to assist the C.S. Mott Foundation, state and local officials, and Michigan residents in identifying a more effective approach to local fiscal crises.

(1) Conclusions

There is no single model policy for state intervention in distressed cities or for prevention of fiscal distress. Changing Michigan's fiscal intervention law to replicate that of another state would likely provide little improvement for Flint or other cities facing fiscal crises. There is no "best practice" for state intervention in cities. What Michigan can learn from other states and our research is that removing and repairing mismanagement addresses only one cause of fiscal distress. Bringing a structurally imbalanced budget back into balance is an important step to assist cities like Flint, but a policy that does not address a state's unique system of revenue, tax and expenditures, and labor policies may not help cities truly escape financial trouble over the long term. States must decide which legal and political tradeoffs they are willing to make to support city fiscal health. Michigan must also recognize that, in comparison with similar states, it provides a particularly difficult environment for its cities.

Municipal fiscal distress is not just a local problem. State policy choices set the boundaries for local action and the conditions under which cities receive assistance. It is not surprising that these conclusions do not point to simple solutions, executable at the local level. Changing any one part of the state context is politically challenging, and it would be impractical to recommend major policy overhauls of Proposal A, the Headlee Amendment, collective bargaining rules and state revenue sharing. Ideally, Michigan would adopt a more balanced approach to its local governments' fiscal needs, but we are aware that this is unlikely in the short term because of both political will and the high barriers to changing constitutionally enshrined rules. Instead, we offer recommendations that balance improvements that would better support cities in fiscal distress with political feasibility.

(2) Recommendations

Create a state agency that coordinates services to local governments and offers technical support and fiscal monitoring. Establishing a formal place within state government that is responsible for ongoing, cooperative work with local governments on fiscal stability and other issues would help create a partnership and culture of trust between the state and its municipalities. The Department of Treasury does provide some of these services on an individual basis via the Office of Fiscal Responsibility (OFR), but the OFR does not have the resources necessary to provide a comprehensive system of support to all of the state's local governments.

It is important that whatever agency is created be empowered with human resources to sufficiently provide service; financial resources, separate from the state's revenue sharing to local governments, to offer special assistance where needed to communities facing challenges or distress; and a position within the state departmental structure that allows it to be taken seriously when recommending policy and working with other departments to assist local governments. The examples of offices in the other states in our study may provide elements of the agency's design, but the office should be built with Michigan's particular context and culture in mind. It may be appropriate to expand the OFR in its current position, but moving the office to another department, establishing it as a stand-alone agency and other potential structures should be evaluated as well.

Raise awareness among citizens and state decision makers that the causes of fiscal distress are not solely at the local level. Flint is an example that can illustrate this point as the C.S. Mott Foundation and city leaders communicate with the public and state officials. As the city emerges from state control, the budget is balanced for the short term, and the transition advisory board is in place to monitor management and compliance with the plan. Yet revenue projections show the city likely facing a structural deficit in the next five years with little available to cut from the budget. State control has reasonably removed management problems as the cause of deficits, yet the city's fiscal health remains precarious. A focused communications effort highlighting the combined effects of Michigan's expenditure, revenue and labor policies could help broaden the discussion of fiscal distress in the state and create awareness that this is more than a local problem. Rather than being the exception, Flint may be the harbinger of what is to come for Michigan's local governments without changes at the state level.

Appendix

Section 1

The following table lists the key concepts that make up core elements of the state context for local fiscal distress, our empirical measure of the concepts, and the data we brought to bear to generate these measures.

Concept	Measure(s) – by Figure/Table	Data
Revenue Pressures		
State Aid Environment	**Figure 1**: Annual average of per capita state aid in real 2005 dollars to three (population) classes of U.S. cities: (1) population > 100,000; (2) population between 25,000 and 100,000; and population between 5,000 and 25,000. Years: 1970 to 2005. **Figure 2**: Annual average of per capita state aid in real 2005 dollars allocated by each of the 48 contiguous states for the years 1970 and 2005.	U.S. Census Bureau. Annual Survey of State and Local Government Finances and Census of Governments (1970-2005). See: http://www.census.gov/govs/classification/
Tax and Expenditure Limits	**Figure 3**: Annual count of state adoptions of five types of TELs, 1970 to 2005. **Figure 4**: State TEL severity score for 1970 and 2005. Severity score indexes six key characteristics of state-imposed TELs: (1) the type of TEL; (2) if the TEL is statutory or constitutional; (3) growth restrictions; (4) method of TEL approval; (5) TEL overrides and exemptions; and (6) method of override.	Amiel, Deller, and Stallmann (2009). http://www.aae.wisc.edu/pubs/sps/pdf/stpap536.pdf
Revenue "Carrot" and Revenue "Stick"	**Figures 5 and 6 and Table 2**: Displays policy distance between state aid environment and state-imposed TEL restrictions. State aid and TEL z scores were calculated for each state year. (These standardize the relationship to the average of all states and all years and represent how many standard deviations a score is from the average.) The aid measure is per capita state aid in real 2005 dollars for cities with populations over 5,000. The TEL measure is the TEL severity score described above. These scores were then differenced (Aid_z minus TEL_z in Figure 5; TEL_z minus Aid_z for Figure 6 and Table 2) to create the distance measure. The values displayed are the average distances from 2000 through 2005. Carrot states are 1.5 standard deviations above the mean difference; stick states are 1.5 standard deviations below the mean difference.	**Aid**: U.S. Census Bureau. Annual Survey of State and Local Government Finances and Census of Governments (1970-2005). **TEL**: Amiel, Deller, and Stallmann (2009).

Expenditure Pressures		
Collective Bargaining Environment and Labor Costs	**Table 1:** Five-category classification scheme, ranging from Very Weak to Very Strong. The collective bargaining strength of local police, local fire fighters, teachers, and "other" local employees – the four main functional areas of local public employment – are measured along three dimensions: (1) collective bargaining rights for local public employees, ranging from "Duty to Bargain" to "Collective Bargaining Is Prohibited"; (2) Union Security Provisions via the existence of a Right-to-Work Law for local public employees; and (3) Strike Policy Provisions. **Figure 6 and Table 2:** Public sector employee union membership as a percent of all public sector employees in state, 2000-2014. Z scores were calculated to standardize the relationship to the average of all states over this 15-year period. The score represents how many standard deviations a state's percentage is from the average state.	**Collective Bargaining Environment:** NBER Public Sector Collective Bargaining Law Data Set. Valletta and Freeman - original (1988); Rueben - update (2000). See: http://www.nber.org/publaw/ **Labor Costs:** Hirsch and Macpherson. (2003) Union Membership and Coverage Database from the Current Population Survey: Note. See: http://unionstats.gsu.edu/CPS%20Documentation.htm

Section 2

We invited three types of individuals to participate in the Workshop on State Intervention in Distressed Communities held at Detroit's Greektown Hotel and Casino October 16-17, 2014: individuals who were formally involved in various elements of state intervention policy design and implementation, those involved in local fiscal distress and bankruptcy from a legal standpoint, and policy experts and researchers. The following table classifies the participants.

State/Affiliate	No. of Participants
Michigan	4
New Jersey	1
New York	1
Ohio	1
Pennsylvania	1
Rhode Island	1
Attorney's, private practice	2
Unaffiliated policy experts	3
C. S. Mott Program officers	2
Local finance professionals	2
MSU researchers	2
MSU research team	5

The following table provides a detailed agenda of the workshop proceedings:

Session Title	Outline
Setting the Context	Surveying the causes and consequences of local fiscal distress, with particular attention to the relatively weak position of local governments in the U.S. federal system: • Review of structural, economic, fiscal, intergovernmental, institutional, and political causes • Local governments' response to fiscal distress • State policies/institutions' role in local fiscal capacity • State policies designed to help local governments meet their financial problems
State Intervention in Distressed Communities: The View From Michigan	An in-depth view of Michigan's approach to local fiscal distress through the eyes of those closely involved in the policy's design, implementation, and evolution
A Deep Dive Into State Intervention: Policies on Paper v. Policies in Practice	A structured dialogue about the participants' experiences with key elements of state intervention. • *Stage 1: Getting in* Where and when is pre-intervention support offered? How are distressed localities identified? When and how do local governments enter the program? How are decision criteria applied? • *Stage 2: Developing a plan* Who carries out the intervention? What actions may these actors take? What are the specific goals of intervention? What are the chief barriers to effective implementation? • *Stage 3: Exit strategy* How does a local government exit the program? Are triggers well specified? When, if ever, are medium- and long-term fiscal, economic, or service-based objectives discussed?
Detroit, Michigan – Ground Zero for the Changing Fiscal Relations Between State and Local Governments	A detailed view of the City of Detroit's ongoing intervention and bankruptcy processes

MICHIGAN STATE UNIVERSITY | Extension

MSU is an affirmative-action, equal-opportunity employer, committed to achieving excellence through a diverse workforce and inclusive culture that encourages all people to reach their full potential. Michigan State University Extension programs and materials are open to all without regard to race, color, national origin, gender, gender identity, religion, age, height, weight, disability, political beliefs, sexual orientation, marital status, family status or veteran status. Issued in furtherance of MSU Extension work, acts of May 8 and June 30, 1914, in cooperation with the U.S. Department of Agriculture. Ray Hammerschmidt, Interim Director, MSU Extension, East Lansing, MI 48824. This information is for educational purposes only. Reference to commercial products or trade names does not imply endorsement by MSU Extension or bias against those not mentioned. Produced by ANR Communications. WCAG 2.0

I. Introduction

The city of Flint, Michigan, has experienced a variety of fiscal difficulties since the early 2000s. In 2002, an emergency financial manager was appointed for the city under Public Act 72 of 1990 and was in place until 2004. Unfortunately, the reforms and changes made at that time only lasted for a few years before fiscal problems re-emerged in Flint (see MSU Extension white paper *Long-Term Crisis and Systemic Failure: Taking the Fiscal Stress of America's Older Cities Seriously*). By 2011, a second wave of emergency managers would be named to run the city under two newer laws (including PA 4 of 2011 and PA 436 of 2012). These emergency managers were removed from the city, restoring home rule in April 2015. The key question: Can Flint avoid the problems that have plagued it for the last 15 years without being placed under state control for the third time? Before answering that question, we must understand the reforms and changes that have occurred in the city since a fiscal emergency was declared in 2011.

The objectives of this case study of Flint, Michigan, are to understand the economic and fiscal trends that led to the state takeover via an emergency financial manager in November 2011 and to analyze the impact of the emergency manager policy on the city's fiscal health. It updates trends presented in a previous case study on fiscal stress in Flint,[3] provides additional detail regarding the policy changes that emergency managers have made, and examines the impacts of those changes.

[3] Eric Scorsone and Nicolette Bateson, *Long-Term Crisis and Systemic Failure: Taking the Fiscal Stress of America's Older Cities Seriously* (Michigan State University Extension, September 2011), http://expeng.anr.msu.edu/uploads/files/42/MSUE_FlintCaseStudy-2011%202.pdf

II. Historical Overview of Flint, Michigan

Examining the history of Flint can provide an understanding of the evolution of the chronic fiscal stress that has plagued the city, as well as its significance in the geographic region. The city of Flint is located in Genesee County, about 60 miles northwest of Detroit. The Flint River provided the natural resources to create successful commerce in the 1800s for fur trading, the lumber industry, the manufacture of carriages, and eventually the production of horseless carriages that led to the birth of the automotive industry. The entrepreneurial spirit and wealth in the area contributed to the founding of the Buick Motor Company in 1903, followed by the incorporation of General Motors (GM) in 1908. With the rapid growth of the automotive industry came concerns for employee working conditions. This led to the first automotive sit-down strike in 1936-1937 in Flint. After 44 days, the strike ended with the first union agreement with GM, which gave rise to the United Auto Workers (UAW). The continued improvements in working conditions and wages enabled Flint to become an ideal place to live and work, and the increase in wealth fostered a well-respected educational system. Early automotive industry leaders such as Charles Stewart Mott and William C. Durant provided the vision to create a strong cultural environment. Flint prospered for most of the years from the 1930s into the early 1970s. Like many industrial cities, however, the economic vibrancy ebbed and flowed with the U.S. automotive industry. In 1978, GM employed over 80,000 Flint-area residents. By 1990, the number of employees decreased to 23,000, dipping to as low as 8,000 in 2006.

City Government

The City of Flint was incorporated in 1855. The present charter, adopted in 1974, provides for a strong mayor-council form of government. The city council consists of nine members, each representing a ward and serving four-year terms. The mayor, also elected to a four-year term, is the chief executive officer. The mayor appoints a city administrator, as well as principal officials and department heads.

The City of Flint provides a full range of services across 32.8 square miles, including: police and fire protection, construction and maintenance of streets and infrastructure, recreational and cultural activities, water and sewer services, and sanitation and garbage pickup services. In addition, the City of Flint is financially accountable for four other entities:

- City of Flint Board of Hospital Managers (manages and operates the Hurley Medical Center providing inpatient, outpatient, and emergency care)
- Flint Downtown Development Authority (promotes rehabilitation of the downtown area)

- City of Flint Economic Development Corporation (provides financing and development opportunities for businesses located in the City)
- Flint Area Enterprise Community[4] (coordinates the federal enterprise and helps to leverage the resources for the zone)

Flint is the county seat for Genesee County. Like most counties in Michigan, the county government provides court services, human services, record keeping, and community enrichment for its residents. The county and its elected officials also serve as regional problem solvers.

Demographics

The city of Flint's population has changed drastically over the past 50 years. This section explores the historical changes that have occurred throughout the city and region. These trends are essential for explaining the path that has led to Flint's fiscal distress and may point to the path that the city may need to follow in order to build a sustainable future.

Population

According to data collected by the U.S. Census Bureau, the population of the city of Flint has declined over five consecutive decades. There were 48% fewer residents in the city in 2010 compared to 1960 (**Exhibit II-1**). In 2012, there were 100,515[5] residents in the city; in 2013 the city's estimated population further declined to 99,758[6].

In contrast, the population trends in the Flint metropolitan statistical area (MSA), defined by Genesee County boundaries, indicate enormous growth through the 1970s with slight declines over the following three decades. This indicates that the Flint metropolitan statistical area has experienced significant decentralization.

4 The Flint Area Enterprise Community (FAEC) was consolidated with the Economic Development Corporation (EDC) (with the EDC Board of Directors exercising authority and control of the FAEC) by an executive order of the city's emergency manager effective August 8, 2012.

5 With a margin of error of +/- 27 people.

6 2013 American Community Survey 1-year estimate, http://factfinder.census.gov/faces/tableservices/jsf/pages/productview.xhtml?pid=ACS_13_1YR_S0101&prodType=table

Exhibit II-1 Flint Metropolitan Statistical Area (MSA) and Flint City Population
Data source: U. S. Census Bureau (Decennial Census, American Community Survey*)

	1940	1950	1960	1970	1980	1990	2000	2010	2013*
MSA	227,944	270,963	374,313	444,341	450,449	430,459	430,459	425,790	415376
City	151,453	163,143	196,940	193,317	159,611	140,761	124,943	102,434	99758

Exhibit II-2 more clearly illustrates this decentralization. In 1940, the city of Flint comprised 66% of the population of the Flint MSA population compared to only 24% in 2013. The estimates from the 2013 American Community Survey indicate that the net migration into the suburbs may be starting to stabilize, though Flint's population has continued to decline in recent years.

Population Characteristics

Flint's population has been aging over the past several decades. **Exhibit II-3** shows a breakdown of the number of people by age group in Flint from 1940 through 2013.

	1940	1950	1960	1970	1980	1990	2000	2010	2013*
	66%	60%	53%	44%	35%	33%	29%	24%	24%

Exhibit II-2 Flint City Population as a Percent of MSA
Data source: U. S. Census Bureau (Decennial Census, American Community Survey*)

	1940	1950	1960	1970	1980	1990	2000	2010	2013*
Age 65 and over	6,613	10,346	14,313	16,765	16,019	15,015	13,084	10,999	12,270
Age 35 to 64	51,779	57,285	63,925	55,694	42,791	42,193	41,878	38,507	38,906
Age 20 to 34	39,778	41,771	41,122	41,946	43,784	35,956	27,858	21,178	20,051
Age 19 and under	53,373	53,741	77,580	78,912	57,017	47,597	42,123	31,750	28,431

Exhibit II-3 Age of Flint Population
Data source: U. S. Census Bureau (Decennial Census, 2013 American Community Survey*)

To see this more clearly, **Exhibit II-4** shows the relative share of each age category in the total population for each year. The share of population aged 19 years old and under generally increased from 1940 to 1970 with the Baby Boom and has since continually declined from its peak of 41% in 1970, to only 29% of the population in 2013. The share of individuals aged 20 to 34 has fluctuated over the last seven decades, but has been on a general decline since 1980. The share of population aged 35 to 64 years old experienced a period of contraction from 1950 to 1980 followed by a continuous period of growth since then, likely due to the aging of the Baby Boomer population. Finally, during the past seven decades, there has been a fairly steady expansion of residents aged 65 and over, probably due to increased life expectancy. This demographic is expected to continue to expand with the aging of the Baby Boomer population.

The racial distribution of the city has also changed since the 1940s, as shown in **Exhibit II-5**. The city has become more diverse with a population that is 39% white and 56% black/African-American in 2012 compared to 95.6% white and 4% black/African-American in 1940. The share of the population in the "Other" category, which includes both individuals of other races and multi-racial individuals, has also grown from 0.1% in 1940 to 6% in 2010.

Exhibit II-4 Flint Age by Percentage of Population
Data source: U. S. Census Bureau (Decennial Census, 2013 American Community Survey*)

	1940	1950	1960	1970	1980	1990	2000	2010	2013*

Age 20 to 34	26%	26%	21%	22%	27%	26%	22%	21%	20%
Age 35 to 64	34%	35%	32%	29%	27%	30%	34%	38%	39%
Age 65 and over	4%	6%	7%	9%	10%	11%	10%	11%	12%

Exhibit II-5 Flint Population by Race
Data source: U. S. Census Bureau (Decennial Census, 2012 American Community Survey*)

	1940	1950	1960	1970	1980	1990	2000	2010	2012*
Black/African American	6,599	13,906	34,521	54,237	66,124	67,488	66,560	57,939	56,638
White	144,858	149,100	162,128	138,065	89,647	69,777	51,710	38,328	39,531
Other	86	137	291	1,015	3,840	3,496	6,673	6,167	4,346

Housing Trends

Housing trends also help tell the story of a city that is facing fiscal stress. The rate of housing vacancy increased from 5.1% in 1970 to 25.4% in 2013 (**Exhibit II-6**). The rate of change in vacancy was highest between 2000 and 2013 with a 13 percentage-point increase. This coincides with Michigan's decade of economic decline. The potential impact of increased housing vacancies on fiscal health include not only decline in property values and associated property tax revenues, but also increased municipal maintenance, police patrol, fire protection, and other costs to address health and human safety concerns.[1]

Home ownership is also associated with the strength of a community's property values. In 2013, owner-occupied housing only comprised 57% of occupied housing units compared to 73% of units at its peak over the last seven decades in 1960. However, the rate of owner-occupied housing in 2013 is a slight increase from its value in 2010, perhaps a small sign of recovery for the city of Flint (**Exhibit II-7**).

	1940	1950	1960	1970	1980	1990	2000	2010	2013*
Vacant	1,161	1,101	3,683	3,261	3,328	4,830	6,720	10,849	13,812
Occupied	40,567	57,882	58,592	60,984	57,648	53,894	48,744	40,472	40,647
% Vacant	2.8%	1.9%	5.9%	5.1%	5.5%	8.2%	12.1%	21.1%	25.4%

Exhibit II-6 Flint Vacant vs. Occupied Housing Units
Data source: U. S. Census Bureau (Decennial Census, 2013 American Community Survey*)

	1940	1950	1960	1970	1980	1990	2000	2010	2013*
Renter Occupied	19,219	17,098	15,743	18,773	19,197	22,588	20,065	18,108	17,841
Owner Occupied	21,348	40,784	42,849	42,211	38,451	31,306	28,679	22,364	23,176
% Owner Occupied	53%	70%	73%	69%	67%	58%	59%	55%	57%

Exhibit II-7 Flint Renter-Occupied vs. Owner-Occupied Housing Units
Data source: U. S. Census Bureau (Decennial Census, 2012 American Community Survey*)

Given these trends, it is no surprise that property values in the Flint area have declined drastically since the Great Recession as shown in **Exhibit II-8**. The state equalized value (SEV) and the taxable value (TV) have almost converged as of 2015. This could be attributed to a combination of falling property values and the "pop-up" effect of the transfer of ownership of property due to Proposal A (which will be discussed in more detail in section IV). Since local governments tend to rely heavily on property taxes for revenue, this is another indicator of the declining tax base of the city.

Economy

The trends in the jobless rate in the city of Flint and Flint MSA tend to follow the same pattern as that of Michigan as a whole (**Exhibit II-9**). The jobless rate rose during the 2001 recession and did not see sustained recovery until after the Great Recession ended in 2009; however, absolute unemployment rates tend to be higher in the city compared to the MSA and the state as a whole. While there has been a drop in unemployment in the city of Flint since the end of the Great Recession, it is still higher (14% in 2014) than pre-2001 recession levels (8% in 2000).

Exhibit II-8 State Equalized Value (SEV) and Taxable Value (TV) – Flint
Data source: Genesee County Equalization Department

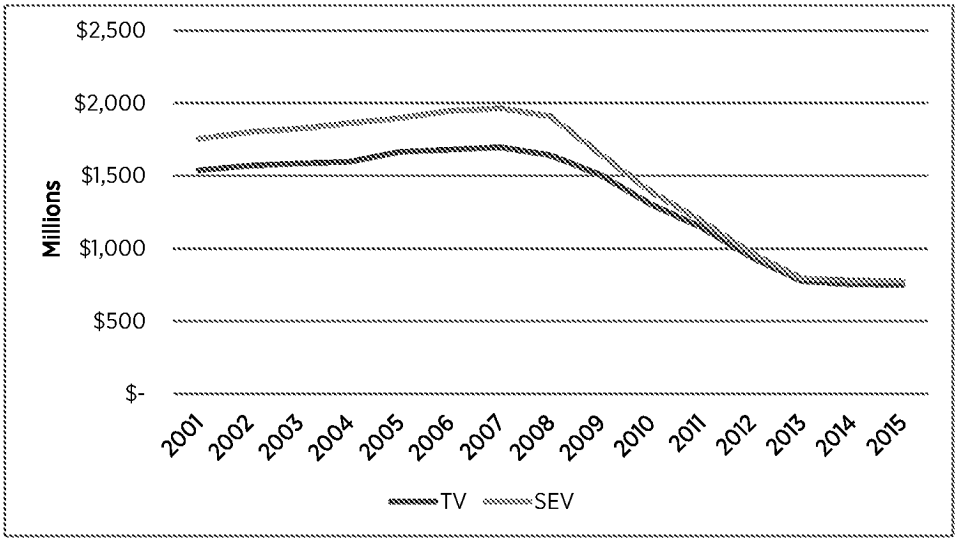

Exhibit II-9 Flint Jobless Rate
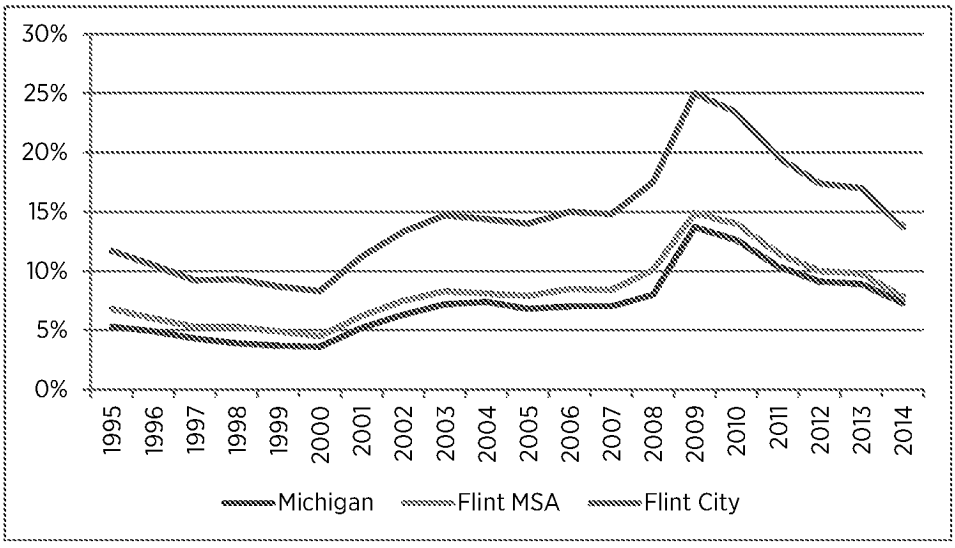
Data source: Michigan Department of Technology, Management & Budget



The city of Flint's audit reports disclosed the city's personal income statistics as shown in **Exhibit II-10**. While a slight recovery occurred after the 2001 recession, in general, personal income has been on a long-term decline since 1996, indicating a diminishing tax base. A decline in personal income not only indicates a lower capacity for property tax and income tax revenues, but also suggests a relation to a lower demand for business-type services. If this demand is fairly elastic with respect to personal income, this would lead to a reduction in city income from public recreation programs, parking fees, and similar sources. The decline in personal income began leveling off in 2009, suggesting signs of stabilization following Michigan's decade in recession.

While the economic climate in the 1990s and 2000s worsened the city of Flint's employment and income trends, many decades of above average poverty rates signal long-term fiscal stress. **Exhibit II-11** shows the general growth in the share of total population living below the poverty level, which peaked at 41.2% in 2010. The share of families below the poverty level follows the population trend. Poverty rates reported by the 2012 American Community Survey indicate

Exhibit II-10 Flint Personal Income
Data source: City of Flint Comprehensive Annual Financial Reports

	1970	1980	1990	2000	2010	2013*
Percent of all persons below poverty level	12.4%	16.9%	30.6%	26.4%	41.2%	41.8%
Percent of families below poverty level			27.6%	22.9%	35.2%	35.9%

Exhibit II-11 Population of Flint Below Poverty Level
Data source: U.S. Census Bureau (Decennial Census, 2012 American Community Survey*)

a possible improvement since 2010, which also coincides with the improvements in unemployment and income, discussed above. If the unemployment and income trends are indeed indicative of economic recovery, then these improvements in poverty statistics are possibly explained by a countercyclical relationship between poverty and the business cycle.

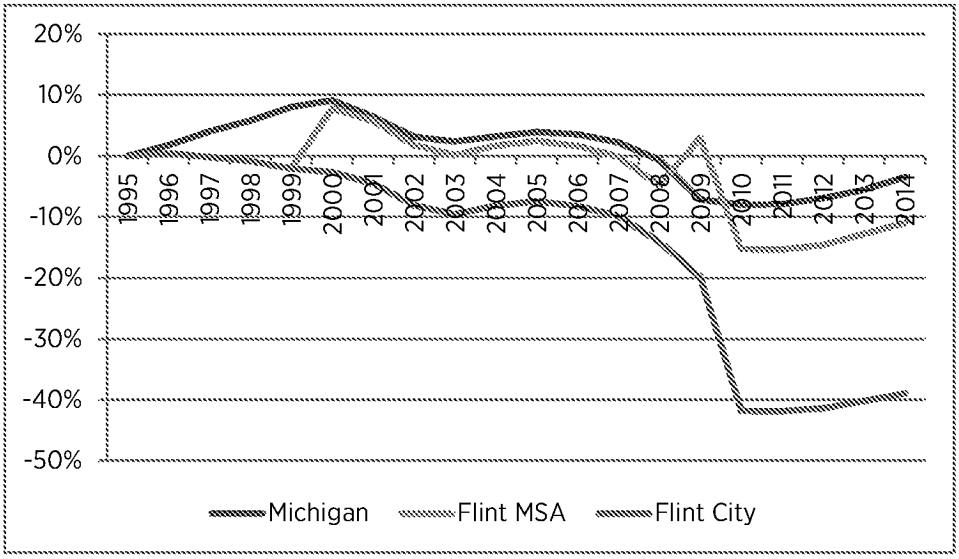
Exhibit II-12 depicts the cumulative change in the number of nonfarm jobs in the city of Flint, the Flint MSA, and Michigan as a whole. While the state overall saw a period of growth in employment in the mid-1990s, employment in the city of Flint and the Flint MSA began to decline in 1996. According to annual estimates from the Bureau of Labor Statistics (BLS) for the Flint MSA, the decline in manufacturing was the driving force of unemployment. Employment in this sector consistently fell between 1995 and 2008, from 48,200 jobs to 9,500.[7] Over this same period, the share of manufacturing jobs (of total nonfarm employment) dropped from 27% to 9%. This trend is likely due to the region's reliance on the domestic auto industry and the declines in the Big Three's market share that began in the 1980s and led to plant closures in the 1990s and early 2000s. According to Genesee County's audit reports, the county's largest employer in FY1997 was GM with 40,944 employees. In FY2009, GM still held its rank as the county's largest employer, but with only 3,417 employees in the county.

While the Flint MSA saw a boost in jobs in 2000, the city experienced a long-term decline in employment over the period shown, with 39% fewer jobs in 2014 than existed in 1995. The share of employment in the city compared to the MSA as a whole also fell in the same time period; as of 2014, employees in Flint represent about 18% of those in the Flint MSA compared to 26% in 1995.

The trends in **Exhibit II-12** indicate that employment started to recover slightly in 2010. This has been primarily driven by the private sector, namely the manufacturing, professional and business services, and trade, transportation and utilities sub-sectors. Public sector employment in the region has followed national trends as it continues to decline. The overall rise in employment in Flint along with the unemployment, income, and poverty trends support the story that the city is experiencing signs of economic recovery.

[7] Not seasonally adjusted

Exhibit II-12 Cumulative Change in Employment in Flint and in Michigan
Data source: Michigan Department of Technology, Management & Budget



The industries representing the city's 10 largest employers have diversified over the past decade. Most notable is the increased prevalence of higher education and employment services (**Exhibit II-13**). During periods of economic decline, enrollment in higher education often increases as individuals seek to expand their skill sets or pursue career changes. Demand for job placement services also increases. Another trend is the increasing concentration of employees in the top 10 employers. The 10 largest employers represented about 65% of the total number of employees in 2014 compared to only 59% of the total number of employees in 2003. This indicates that the impact of smaller firms in the city has diminished over this period. Larger firms tend to have more organizational slack,[ii] which can act as a buffer during economic downturns. Smaller firms that do not have such slack are likely more vulnerable to poor economic environments. Depending on the nature of recovery, employment in small firms could diminish even further during future recessions.

Exhibit II-14 illustrates the diversification of employment in the city of Flint by comparing the share of employees in each industry in 2003 and 2014. The relative share of both automotive employment and public sector employment dropped more significantly than that of healthcare employment.

Principal Employer Industry	FY2003	FY2014
Automotive	23,616	13,975
Federal, state and local government	13,037	6,103
Healthcare	9,569	5,963
Higher education	-	5,656
Employment services	-	1,214
Employees working for ten largest employers	46,222	32,911
Total employees working in City	78,553	51,128

Exhibit II-13 Employment in Flint's 10 Largest Employers by Industry
Data source: City of Flint Comprehensive Annual Financial Reports

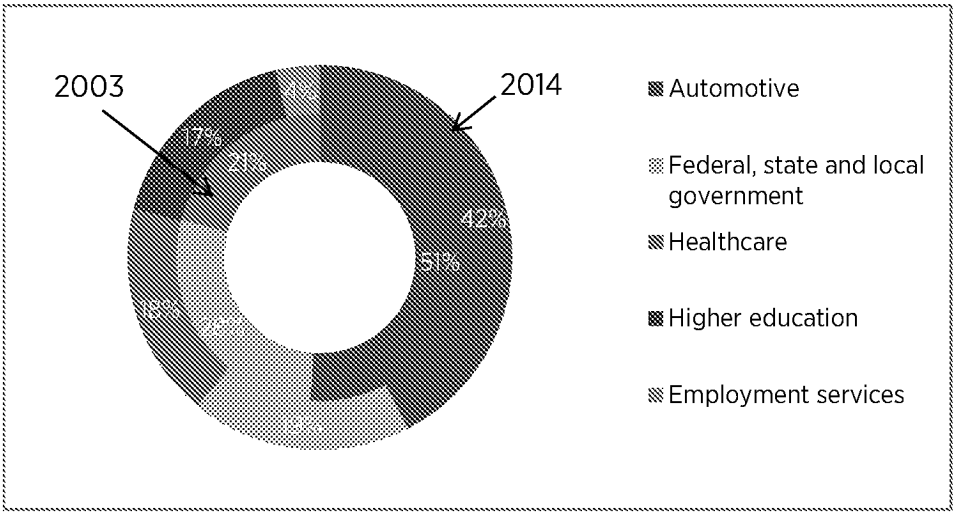


Exhibit II-14 Flint's 10 Largest Employers by Industry
Data source: City of Flint Comprehensive Annual Financial Reports

The city has concentrated efforts to encourage new development. Although most new projects include property that is either tax exempt or requires a property tax incentive, they have brought employees to the city, which increases the nonresident income tax revenue. Recent redevelopment efforts have focused on marketing the 452-acre vacant "Buick City" property. The Environmental Protection Agency has committed up to $7 million for Phase I clean-up of that property.[iii] The total commitment to Buick City is approximately $30 million. Funding for the remediation is from the Revitalizing Auto Communities Environmental Response (RACER) Trust that was created through the GM bankruptcy. The soil remediation project began in early 2011. According to the March 2014 update, corrective measures are being implemented in the Southend site. A corrective measures proposal for the Northend cleanup is being reviewed and will be presented to the public in summer 2014.[iv]

In November 2013, the American Cast Iron Pipe Company announced plans to construct a plant on the Buick City property, creating 50 to 60 manufacturing jobs for Flint. The plant opened in December 2014.

Flint's air transportation needs are serviced by nearby Bishop International Airport. In January 2011, the Bishop Airport Board approved the bid process for a $16.8 million expansion.[v] This project added 47,000 square feet of terminal space, four gates and doubled the width of the corridor linking two sections of the airport. The expansion was completed in November 2012, adding 350 jobs and increasing the number of passengers at Flint's Bishop International Airport[vi]. Several highways meet road transportation needs.

III. Flint Under Emergency Financial Management

Path to Receivership

Due to its decreasing population, employment, and tax revenues, the Flint city government has been under considerable fiscal stress in recent years. In the early 2000s, an emergency financial manager (EFM) was appointed for the city, and was in place until 2004; however, the city soon returned to fiscal insolvency.

The cycle of returning to a deficit position after an EFM appointment ends is not unique to Flint. Drawing on the experience of Flint and other cities that have been assigned an EFM, state policy makers drafted revisions to PA 72, which was replaced by PA 4 in 2011. After a referendum, PA 4 was repealed in 2012, then replaced by PA 436 of 2012[8].

The new law provides greater incentive and mechanisms for local governments to address budget challenges before an emergency manager (EM) is assigned. PA 436 also provides four options to struggling municipalities[9], offering alternatives to the appointment of an EM. Ultimately, however, if cities with chronic fiscal stress are suffering from structural challenges beyond their control, improved management will only be able to cure a limited number of problems.

If a city is placed in receivership under PA 436 of 2012 and an EM is appointed by the state, he or she is granted broad powers to address the struggling city's finances. This includes the authority to amend collective bargaining agreements, make personnel changes, and review and approve the city's budget.

Responding to the most recent fiscal crisis, Michigan's Treasury Department conducted a preliminary review of Flint's financial situation in August and September 2011. [vii] The review found that general fund expenditures had exceeded revenues for the preceding four years. Two years after its deficit reduction plan had been submitted to the state, the general fund deficit had more than doubled. The review also reported that departments within the municipal government had been compensating for cash shortages by borrowing from other funds. The review team determined it was uncertain whether the City of Flint would be able to fulfill its short-term financial obligations.

Due to the City of Flint's structural deficit, increasing legacy costs, and accumulating debt, the review team recommended to the governor that the city be placed under emergency financial management under Public Act 4. In November 2011, the governor of Michigan placed the City of Flint in receivership.

Michael Brown was appointed as the city's emergency financial manager effective December 1, 2011. In August 2012, Michael Brown was replaced by Edward Kurtz as emergency manager (who had served as the city's EM from 2002 to 2004). Ed Kurtz served as the city's emergency manager until July 2013, at which time Michael Brown was again appointed by the governor. Michael Brown resigned in September 2013; Darnell Earley was appointed as his replacement. In January 2015, it was announced that Jerry Ambrose, who had previously served as the city's finance and administration director, would replace Darnell Earley as emergency manager. Jerry Ambrose served as the city's EM until April 2015, when control of the city's finances was returned to the mayor and city council under the supervision of a Receivership Transition Advisory Board.

Reforms to Personnel Costs

Wages and Salaries

Significant actions were taken shortly after Michael Brown's appointment as emergency manager. Almost immediately after his appointment, the salaries, benefits, and other compensation were eliminated for the city's mayor and nine council members. The mayor's salary was later restored to 60% of his base salary with full restoration of his benefits, and the salaries of city council members were restored to $7,000 per year with no benefits. Additionally, council members were required to complete level one of the Michigan Municipal League's core courses for municipal government. Several positions were eliminated, which included the Office of the Ombudsman, the Civil Service Commission, and the respective staff assigned to these offices.

[8] Emergency financial managers were in place under Act 72; the term "emergency manager" is used in PA 4 and PA 436. There are somewhat different powers under the various acts but otherwise the concept is the same.

[9] These options include entering into a consent agreement with the state, filing for bankruptcy, agreeing to mediation, or accepting the appointment of an EM.

In an effort to reduce the city government's wage expenses by 20%[viii], significant changes were made to the collective bargaining agreements of the City of Flints's police and fire unions. Wages were reduced across the board for members of all police unions: by 1.5% for sergeants, by 2.5% for captains and lieutenants, and by 5% for officers). Salaries and wages of members of the firefighters' union were also reduced[10].

Substantial changes were also made to the city government contracts with the American Federation of State, County and Municipal Employees (AFSCME) locals 1600 and 1799, the unions representing the majority of general city government employees. Wages for Local 1600 members were reduced by 2.5%, and several changes to overtime, holiday, and leave pay were made for both unions.

With the exception of emergency overtime, the EM required that all employee overtime be approved in advance. Executive orders were also issued to put limitations on departments' spending authority, with EM approval required for purchases over $10,000. Stringent budgetary guidelines were put on all departments, emphasizing that budgetary authority is not a mandate to spend and that actions to keep expenses low should be taken whenever possible.

Pensions

Changes were made to police and fire unions' pension eligibility. Employees' annual pension contributions were increased to 9.5% of all earnings for those in the fire and police unions. For members of the unions hired prior to the introduction of the new pension guidelines, the portion of pensions earned up to the 20th year of service are calculated according to the expired bargaining agreement. However, the multiplier was reduced to 2.25 and capped at 240 hours of leave time included as part of the final average compensation (FAC) for all service time earned after the effective dates of the new collective bargaining agreements.

Similar adjustments were made to the pension benefits for locals 1600 and 1799. The defined benefit multiplier was reduced to 1.5% prospectively, and the employee contribution rate was increased from 8% to 12% for Local 1600 and to 9.5% for Local 1799. Hybrid retirement plans (with both defined contribution and defined benefit components) were established for new hires and former defined benefit plan participants. Employees' contributions to the defined contribution components are matched by the City of Flint; employer contributions to the defined benefit component were capped at 10%.

To save administration-related costs, pensions for all unions with collective bargaining agreements with the City of Flint were transferred from the Flint Employees' Retirement System (FERS) to the Michigan Municipal Employees Retirement System (MERS).[ix] This move was approved by all but the police officers' union; section 19(k) of PA 4 was invoked to approve the transfer of Flint police officers' pensions.

Other Post-Employment Benefits

Changes were made to the healthcare benefits received by retirees of the police and fire unions. Cuts included discontinuing healthcare for a former employees' spouse if he or she is eligible to receive paid health coverage through an employer or former employer. The City of Flint reduced the number of plans offered to employees hired after July 1, 2012, offering a high deductible plan in conjunction with a health savings account. Through executive orders, the EM reserved the right of the city to change or discontinue the health insurance programs in response to the Patient Protection and Affordable Care Act (PPACA) as amended.

The City of Flint scaled back its contribution requirements for an active employee's health coverage, requiring employees to pay any premium contributions that exceed the amount contributed by the employer through pension deductions.

Retirees and their spouses aged 65 and over who are covered by Medicare supplemental plan at the employer's expense are subject to contribution limits of the Publicly Funded Health Insurance Contribution Act (PA 152 of 2012) if and only if the retiree enrolls in and pays for Medicare Supplemental Part B. Changes made to the healthcare coverage of retired members of the local 1600 and 1799 unions were similar to those of the other major unions representing City of Flint employees.

Changes were made to the retiree health benefits offered to personnel hired after the effective dates of the new agreements. Instead of employer-paid retiree healthcare coverage, members of the police officers' and firefighters' unions, as well as locals 1600 and 1799 hired after April 2012 were eligible for Retiree Medical Savings Accounts (RMSAs) to which the City of Flint and employees contribute through payroll deductions.

Under the executive orders, the City of Flint committed to contribute $1,500 annually to the RMSAs, with employees contributing $600 per year. Employees will be 100% vested at all times on their own contributions and investment earnings, while employer contributions and investment earnings will be 100% vested after five years of completed service. The same changes were made to retiree health benefits of newly hired nonunion city government

[10] From $63,080.16 to $50,791.52 for CAD supervisors, from $60,515.52 to $56,998.24 for quartermaster, and from $33,467.20 to $27,270.88 for comm. specialist trainees

employees. Contributions to a new employee's RMSA continue until the employee is no longer employed by the City of Flint (including retirement) or when the employee becomes eligible for Medicare. These benefits were not made available to nonunion retirees or spouses who are eligible for health coverage through another employer or former employer.

Other Reforms

In addition to actions taken to reduce the City of Flint's financial obligations in relation to staff, other measures were taken to address the growing deficit. User fees were implemented for waste collection and a special assessment was levied to provide funds for the operation of street lighting (to eliminate $2.85 million in costs to the city government's general fund[x]). Both fees were added to homeowners' property tax bills. Water and sewer rates were increased by 25% to adequately cover the costs of operating both systems.

The City of Flint's Fiscal Year 2013 budget, passed by an executive order on April 24, 2012, was the first balanced budget it had passed in seven years. A total of 155 positions (16% of the workforce) were eliminated.[xi]

Property taxes were increased in order to support police and fire budgets. This increase was achieved by a vote of the city's residents, who approved a 6 mill property tax increase on November 6, 2012.[xii] This tax increase allowed the city government to maintain staffing levels in the police and fire departments that had, up until that point, been supported through a federal grant.

IV. City Finances

Repeated periods of governmental fund deficits can be used to identify cities with chronic fiscal stress. If a city is consistently unable to sustain a positive fund balance, it is likely facing structural budgetary constraints. The City of Flint's fund balance/accumulated deficit history highlights its recurring deficits (**Exhibit IV-1**). Temporary solutions provided some periods of short-term relief in 2005 to 2007 due to the measures taken by an emergency financial manager under Public Act 72 of 1990. The governor appointed the EFM in May 2002, who remained in place until 2004. The progress made during the EFM's tenure was undone three years later due to subsequent labor settlements, costly litigation, and declining revenues. The City of Flint closed FY2008 with a deficit in the General Fund of $6.8 million. Since 2010, the Flint city government has been able to build up the fund balances in its other governmental funds, but has mixed performance in controlling the deficit in its General Fund, which is the main fund for general operating expenses.

General Fund

As of June 30, 2014, the City of Flint's General Fund ended the year with an accumulated deficit of $8.9 million. This is the seventh consecutive year that the fund balance has been in a deficit position, but significantly reduced from the $19.1 million deficit in FY2012. FY2014 is also the third year since FY2006 that the city operated with a surplus in its General Fund; the only other year in which the General Fund ended with a surplus is FY2011 (**Exhibit IV-2**).

Exhibit IV-1 Governmental Funds – Flint History of Fund Balances
Data source: City of Flint Comprehensive Annual Financial Reports

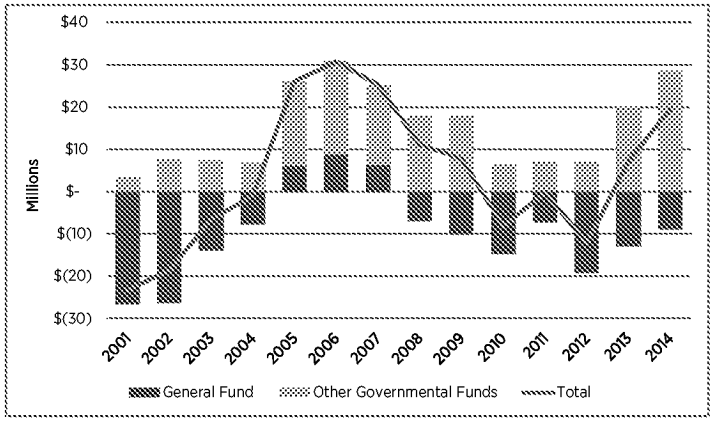

Exhibit IV-2 Flint General Fund Revenues and Expenditures
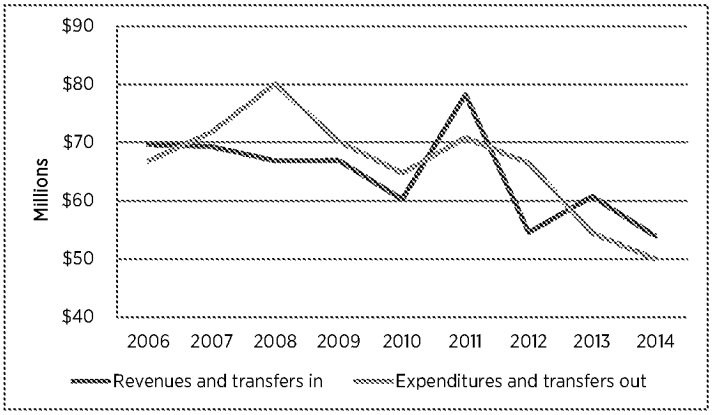
Data source: City of Flint Comprehensive Annual Financial Reports



Revenues

As of 2014, the four primary sources of revenue, and their proportionate share of the General Fund, are property tax (10%), income tax (24%), state shared revenue (32%), and charges for services (18%). **Exhibit IV-3** shows the changes in the share of General Fund revenues over time. Typically, the property tax is the primary source of revenue for local governments. However, the City of Flint's reliance on the property tax has severely diminished over the last several years, which is a testament to the impact of falling property values in the city. Conversely, the share of revenues from charges for services has seen an overall growth. In FY2010, the share of revenues from charges for services actually exceeded that from property taxes. Both the share of revenues of income taxes and of state shared revenue have also declined, but to a lesser extent. The spike in the share of "Other" revenue funds in FY2011 was due to an $8 million debt issuance in the form of 25-year fiscal stabilization bonds from the Local Government Loan Program through the Michigan Department of Treasury. This was less than half of the $20 million in bonds that the City of Flint had initially requested in order maintain operations when it had anticipated that it would run out of cash by March 1, 2011.

Property Tax

Property tax in Michigan is assessed on both real and personal property, though municipalities are limited in levying property taxes in a number of ways. First, the Home Rule City Act of 1909 limits cities in Michigan to levying property taxes of no more than 20 mills for direct municipal services.[xiii] Next, the Headlee Amendment, ratified in 1978, limits the authorized millage rate when property values rise at a faster rate than the rate of inflation.[xiv] Increases in property values due to improvements or new construction are not subject to this limit. Finally, in 1994, Michigan voters approved Proposal A, which limited annual increases to the taxable value to 5% or the rate of inflation, whichever is lower, until there is a transfer of ownership.[xv]

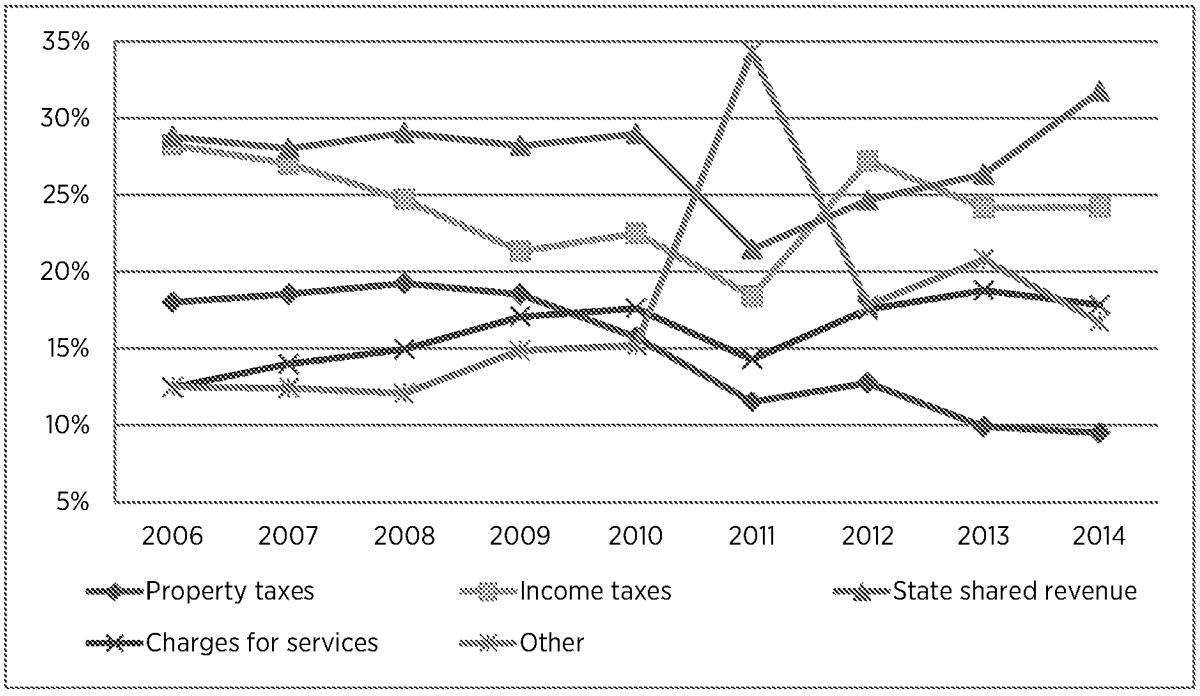


Exhibit IV-3
Share of Flint General Fund Revenues
Data source: City of Flint Comprehensive Annual Financial Reports

Compared to the 10 most populated local units in Genesee County, which represent 72% of the population, the city of Flint levies the highest homestead tax rate (**Exhibit IV-4**). This may cause the city to be less competitive in attracting residents, which hinders its ability to increase its tax base. High tax rates also create incentives for residents to relocate to the suburban areas, which may be one factor that contributes to the population decentralization trends shown in **Exhibit II-2**. For example, a homeowner in the city of Flint will pay, on average, 37.7% more in property taxes than residents of the nine other largest communities that own properties with the same taxable value. This is a substantial increase compared to the same analysis that was performed in the 2011 case study; in FY2011, a homeowner in Flint would pay on average 28.2% more than a homeowner in the other nine communities with a property that had the same taxable value. If a residential property has a taxable value of $75,000, the homeowner in Flint will pay $4,413. A homeowner in the next most-populated community, Grand Blanc Charter Township, will pay $3,119.

As a % of County Total		**72%**						

* ACS 5-year estimate

Although the nonhomestead property tax rate had been fairly stable from 2000 to 2010, a more noticeable increase has occurred over the last few years (**Exhibit IV-5**). In 2013, the direct city millage increased from 16.1 to 19.1 mills with the addition of the 6 mill public safety millage and an elimination of a 3 mill waste collection millage.

As discussed in section II, property values in Flint have dramatically declined over the past four years. **Exhibit IV-6** shows a corresponding reduction in property tax revenues; receipts from property taxes in FY2014 were less than half those in FY2006, and less than 40% of their peak in FY2008. The deterioration of the property tax as a stable revenue source is especially clear given that less than 10% of General Fund revenues are dependent on property taxes in FY2014 compared to more than 18% five years prior.

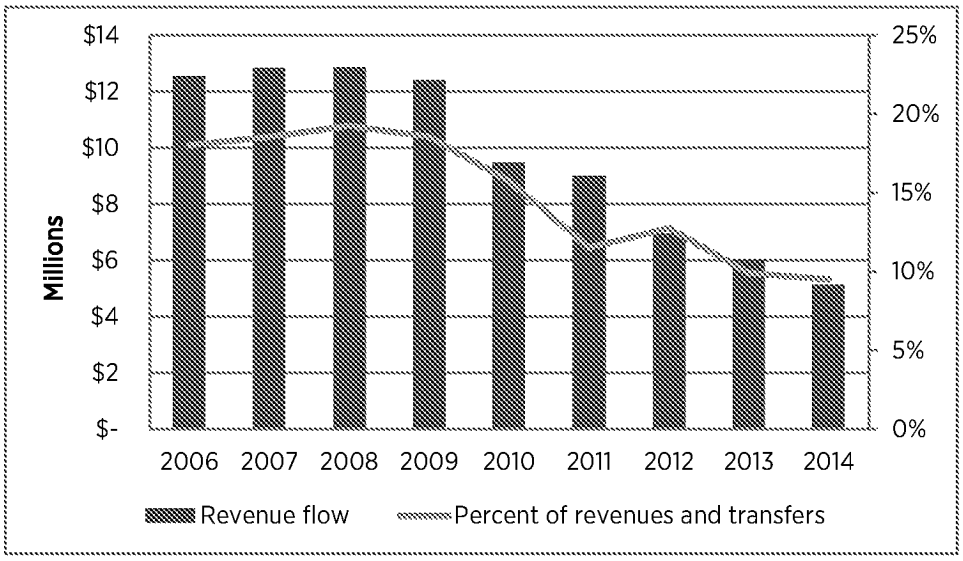

Exhibit IV-6 Flint Property Tax Revenue
Data source: City of Flint Comprehensive Annual Financial Reports

Income Tax

Of the 10 largest cities in Michigan, three are authorized to levy an income tax, including Flint. The income tax rate is 1% for city residents and 0.5% for non-residents. Income tax receipts steadily declined from FY2006 to FY2010 (**Exhibit IV-7**). Since FY2010, this revenue stream has stabilized and seen some slight growth, though it fell again in FY2014.

State Shared Revenue

State shared revenue is generated from a statewide sales tax. Revenue sharing to local governments consists of both constitutional and statutory payments. The constitutional portion is distributed on a population basis. The statutory portion of revenue sharing is defined by a formula based on a combination of population, taxable value per capita, and millage yield (a ratio of the taxable value per mill levied). Starting in FY2012, the statutory revenue sharing was replaced with the Economic Vitality Incentive Program (EVIP).[16] The EVIP allocates funding to cities, villages, and townships based on their ability to satisfy certain criteria, but relies on the old statutory program to determine participation and individual payment amounts. **Exhibit IV-8** shows the breakdown between the

Exhibit IV-7 Flint Income Tax Revenue
Data source: City of Flint Comprehensive Annual Financial Reports

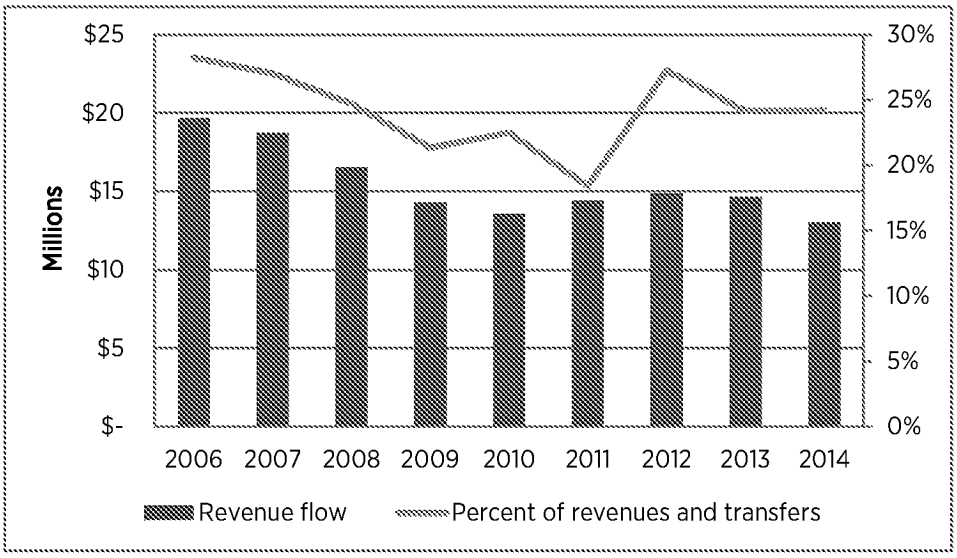

Exhibit IV-8 Breakdown of Flint State Shared Revenue
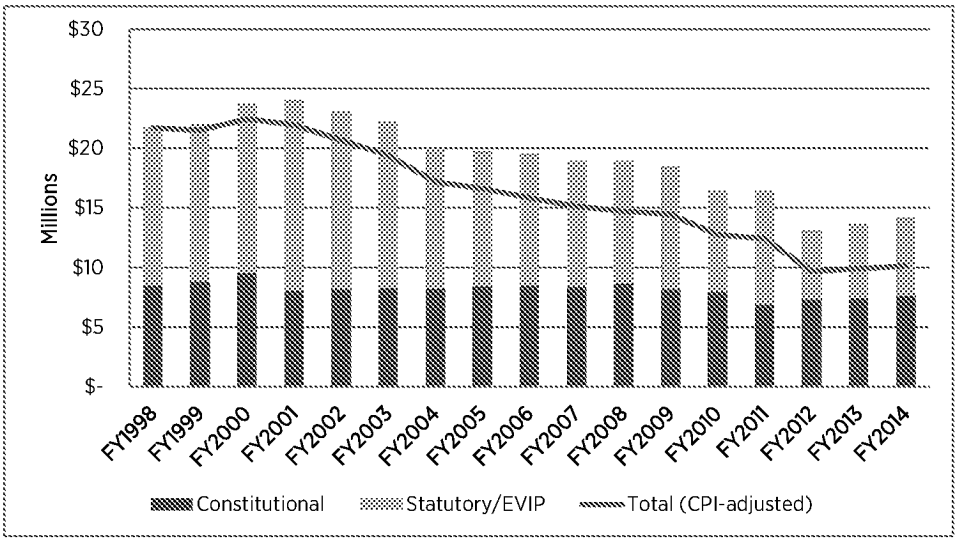
Data source: Michigan Department of Treasury



constitutional payments and statutory/EVIP payments to the City of Flint since FY1998. While constitutional payments have been fairly constant, there has been a substantial decline in statutory/EVIP payments.

Exhibit IV-9 displays the change in state shared revenue over time as reported in the city's financial audit reports.

Charges for Services

While all other revenue sources have been declining since FY2006, income from user fees and charges for services have actually increased on a nominal basis over the same period (**Exhibit IV-10**). Though it has fluctuated in recent years, the percentage of revenues and transfers from charges for services is still relatively high compared to FY2006. This is indicative of cities undergoing fiscal stress since they seek to replace the typical tax and intergovernmental sources with other revenue streams.

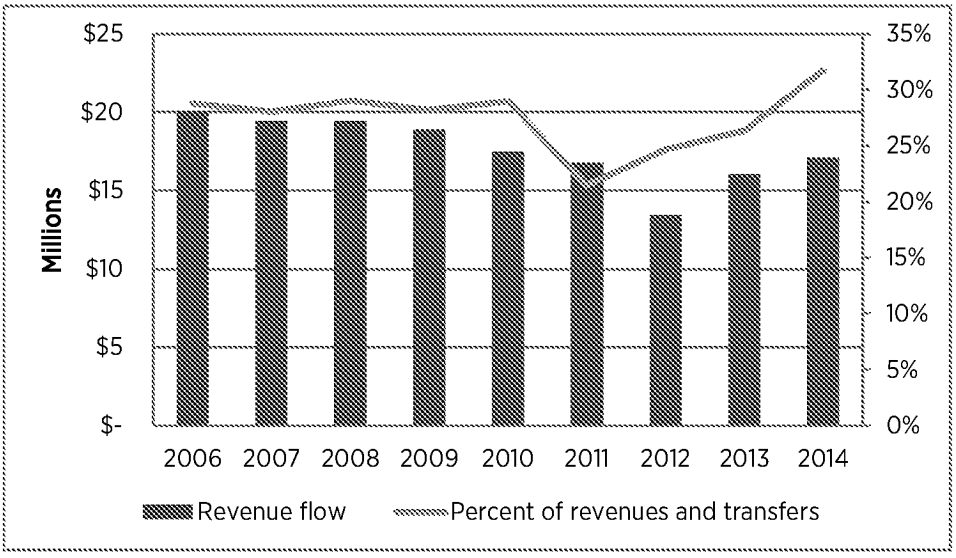


Exhibit IV-9 Flint State Shared Revenue Over Time
Data source: City of Flint Comprehensive Annual Financial Reports

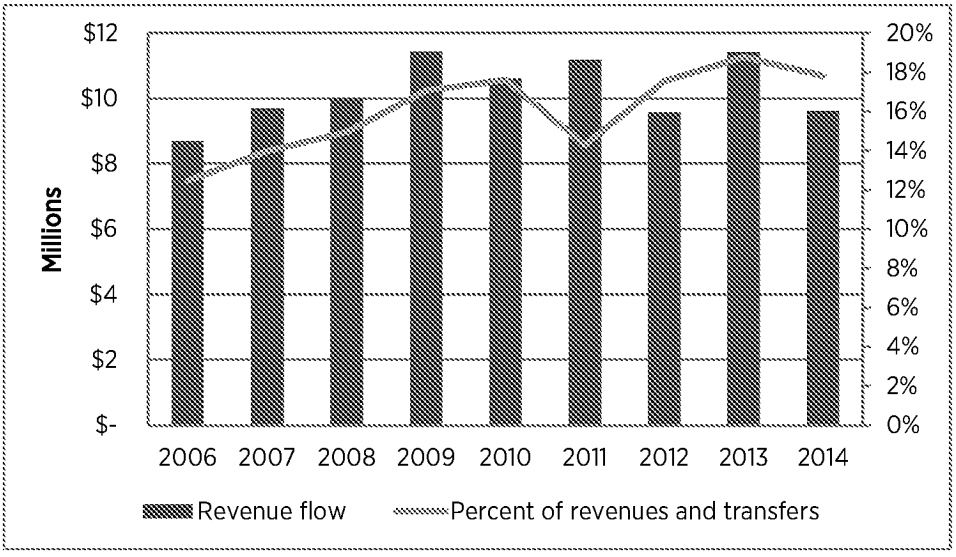

Exhibit IV-10 Charges for Services in Flint
Data source: City of Flint Comprehensive Annual Financial Reports

Expenditures

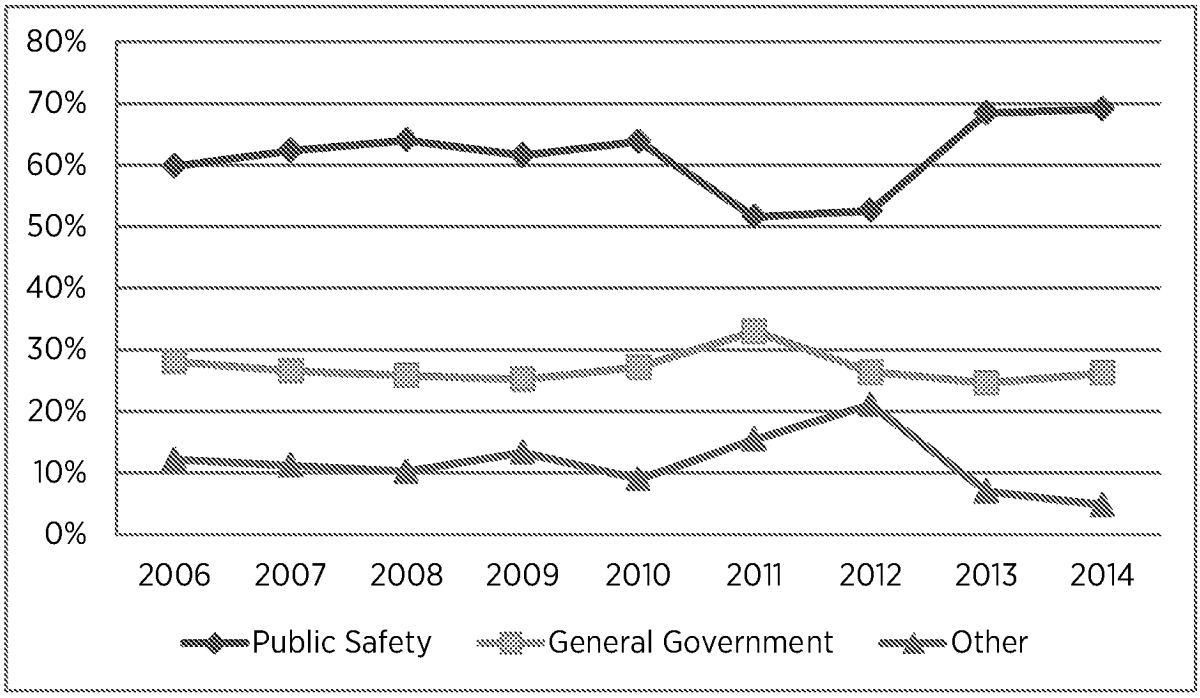
The primary General Fund expenditures are public safety and general government services. In FY2014, 69.1% of spending was allocated to public safety and 26.2% to general government (**Exhibit IV-11**). The following section will detail the spending in various categories for the city of Flint.

Public Safety

Public safety consists of the majority of the General Fund expenditures, and includes the following categories:

- Building inspection
- Combined public safety department
- Emergency dispatch
- Fire department
- Police department

Exhibit IV-11
Share of General Fund Expenditures in Flint
Data source: City of Flint Comprehensive Annual Financial Reports



As discussed in section III, during the November 2012 elections, the voters of Flint approved a 6-mill property tax increase for public safety with 57% approval.[xvii] The proposal also required that 55.5% of General Fund revenues be allocated to public safety budgets (**Exhibit IV-12**). Additional, temporary funding support includes:

- $6.9 million Staffing for Adequate Fire and Emergency Response (SAFER) grant from the Federal Emergency Management Agency (FEMA) awarded in 2012 to avoid laying off 32 fire fighters[11]
- $2.1 million in state funds granted in 2012 to re-open the city's lockup
- $1.8 million grant from the Michigan Department of Treasury Competitive Grant Assistance Program (CGAP) to install a communications tower in the city to expand radio coverage for police and firefighters awarded in April 2013

[11] This grant was awarded twice, but not renewed in 2014.

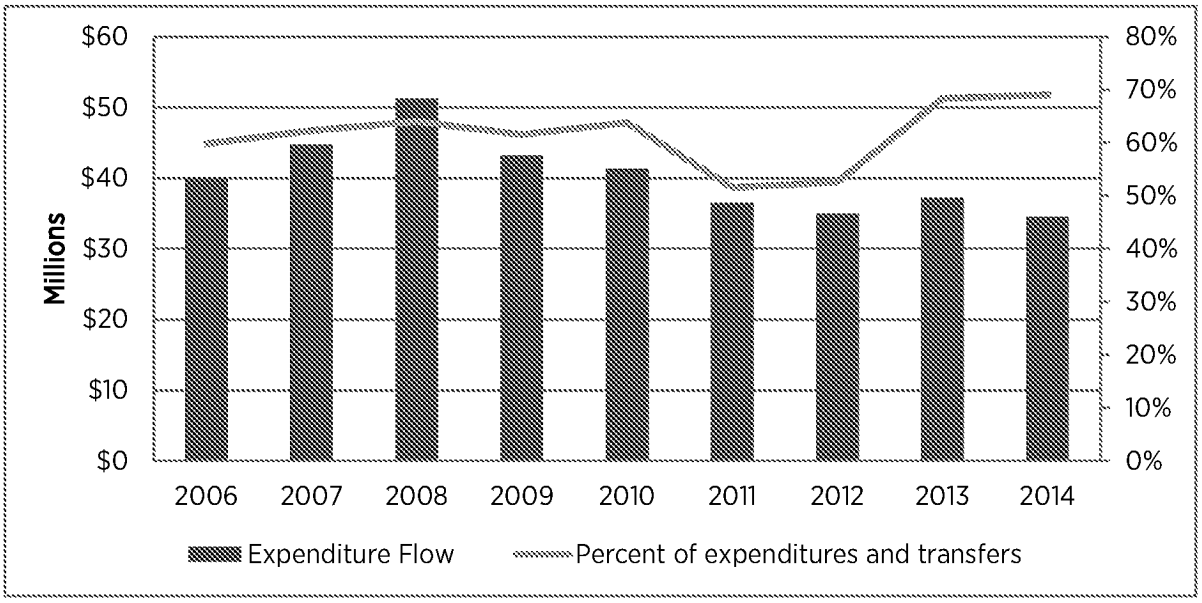


Exhibit IV-12
Flint Public Safety
Data source: City of Flint Comprehensive Annual Financial Reports

General Government

As of FY2014, general government expenditures include the following categories of local government operations:

- Mayor's office
- Finance
- Human relations
- City clerk
- Law office
- Human resources
- City administrator

Expenditures on general government have followed an overall decline since FY2008 (**Exhibit IV-13**). The exception in FY2011 was due to a settlement payment related to a lawsuit against the city regarding the sale of the Genesee Towers building.

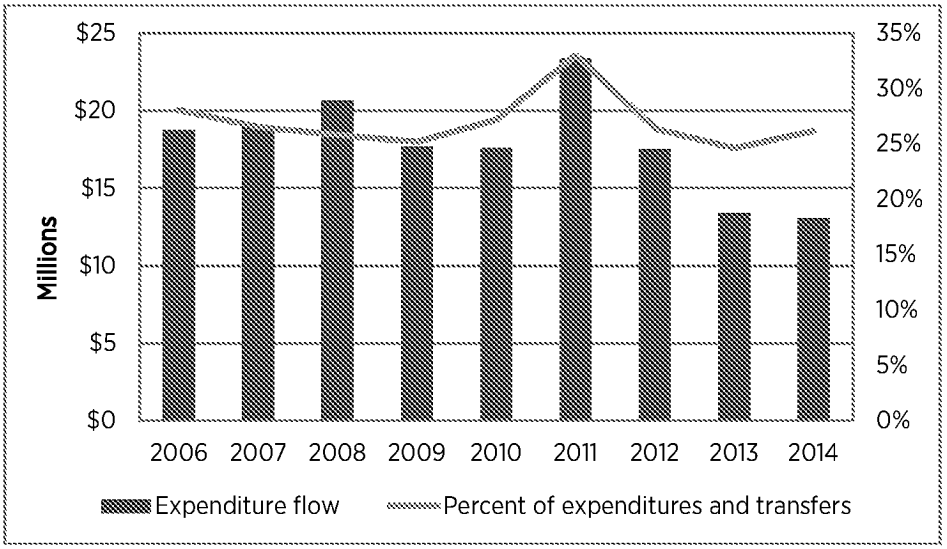
Special Revenue Funds

Revenues and expenditure trends for other governmental funds are shown in **Exhibit IV-14**. These include special revenue funds and debt service funds. As of FY2014, special revenue funds consist of the following types of funds:

- Major streets
- Local streets
- Neighborhood policing
- State Act 251 – forfeitures
- EDA Revolving Loan
- Public Improvement Fund
- Parks and recreation
- Senior citizen centers
- City park
- Building department
- Garbage collection
- Street light (special assessment)
- Public safety (special millage)

The city established a special assessment for streetlights in FY2013 to avoid making cuts to public safety. The public safety special millage was discussed in earlier sections of this report. As of FY2014, debt service includes funds from a

Exhibit IV-13 Flint General Government
Data source: City of Flint Comprehensive Annual Financial Reports



parking deck, Windmill Place, and Buick City. Relative to the General Fund, the city government has managed to keep expenditures in pace with revenues. About $6.5 million of the $10 million deficit in FY2011 was due to the Federal Grants Fund. The majority of the remaining deficit consisted of a $2.3 million deficit in the Major Streets Fund.

Proprietary (Enterprise) Funds

The City of Flint's two proprietary funds include water supply and sewer disposal operations. Prior to FY2012, Hurley Medical Center and the Golf Division were considered business-type activities as part of the city government under proprietary funds. However, starting in FY2012, the city began presenting Hurley as a separate component unit in the audit report, and in March 2012, the city entered into agreements with Flint City Golf, LLC, and the Mott Park Public Golf Course Association to operate the city's golf courses.

Historically, the City of Flint purchased Lake Huron water from the Detroit Water and Sewerage Department (DWSD). Per a resolution that authorized the sale of Drinking Water Revolving Fund bonds, the city government sets its water rates to cover expenses of the administration and operation of the water system. These expenses include the rates charged by the DWSD, which had increased on average by 10% per year. The rates must be sufficient to pay an amount equal to 125% of principal and interest on bonds and any other obligations. In January 2011, the city increased water and sewer rates by 25% and 22% respectively. Another increase of 35% on both water and sewer rates followed in September 2011 in order to meet these revenue requirements.

In April 2013, the city ended its contract with DWSD, and opted instead to contract with the Karegnondi Water Authority (KWA) to build a pipeline from Lake Huron to Genesee County. Effective October 1, 2013, the City of Flint entered into a contract to purchase water from the KWA, with the pipeline expected to be completed in July 2016. The city officially switched its water source to the Flint River in April 2014, to be used until the agreement with the KWA came into effect. However, the city and its residents have experienced several issues with water quality since then.[xviii]. Flint was awarded $2 million from the state through Michigan's Financially Distressed Cities, Villages, and Townships Grant Program to improve its water infrastructure and quality[xix].

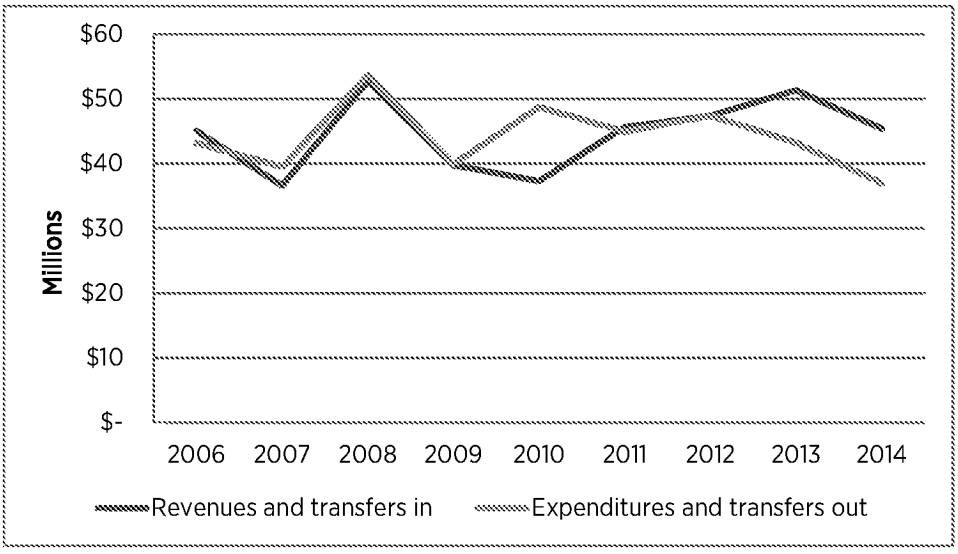


Exhibit IV-14 Other Flint Governmental Funds Revenues and Expenditures
Data source: City of Flint Comprehensive Annual Financial Reports

In general, the revenues and transfers into the water supply fund have exceeded expenditures and transfers out (**Exhibit IV-15**).

In contrast, the sewer disposal fund had seen major deficits annually up until FY2013 (**Exhibit IV-16**). One major contributor to the operating losses associated with this fund is internal borrowing by other funds. This will be discussed in more detail in section V.

Exhibit IV-15 Flint Water Supply Fund Revenues and Expenditures
Data source: City of Flint Comprehensive Annual Financial Reports

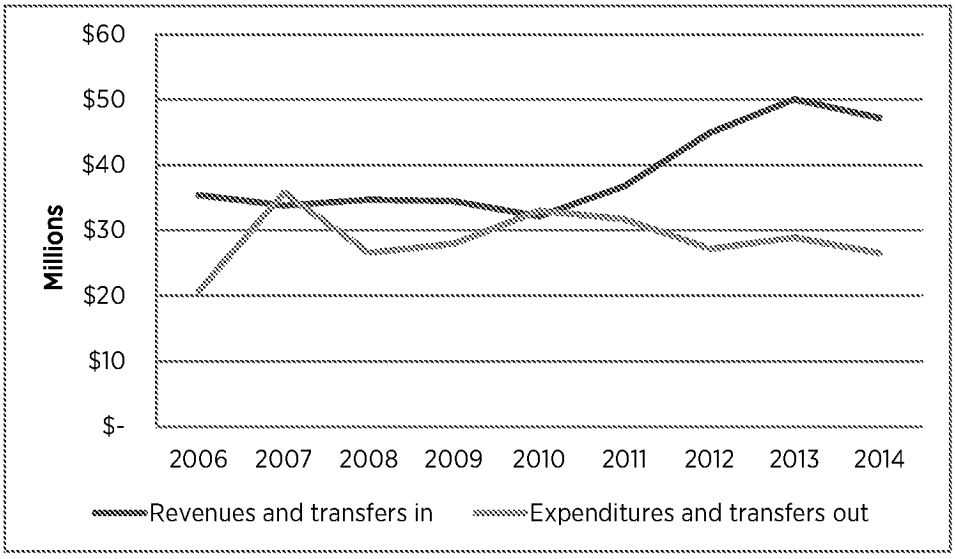

Exhibit IV-16 Flint Sewer Disposal Fund Revenues and Expenditures
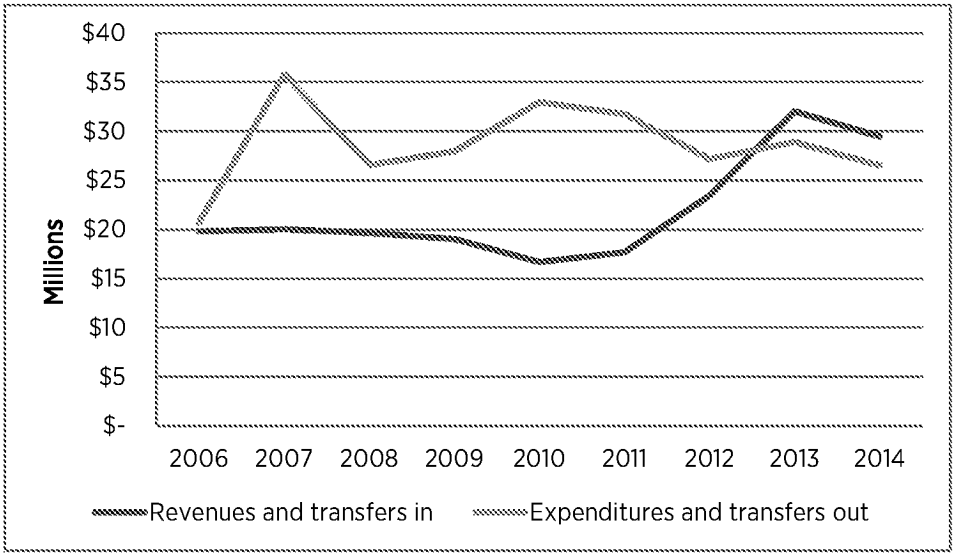
Data source: City of Flint Comprehensive Annual Financial Reports



Internal Service Funds

The City of Flint allocates the internal service funds for data processing, fringe benefits, central maintenance garage, and self-insurance. Internal service funds should be self-sustaining through charges for services to other departments and funds. However, this is not always the case, as shown by the positive figures for "Transfers In" in **Exhibit IV-17**. The Central Maintenance Garage Fund received incoming transfers for six consecutive years. On average, these transfers amount to about 28% of operating costs annually. There was an exception in FY2013, in which the Central Maintenance Garage Fund issued an outgoing transfer to the Garbage Collection Fund in order to transfer proceeds related to the sale of city garbage trucks.

V. Debt

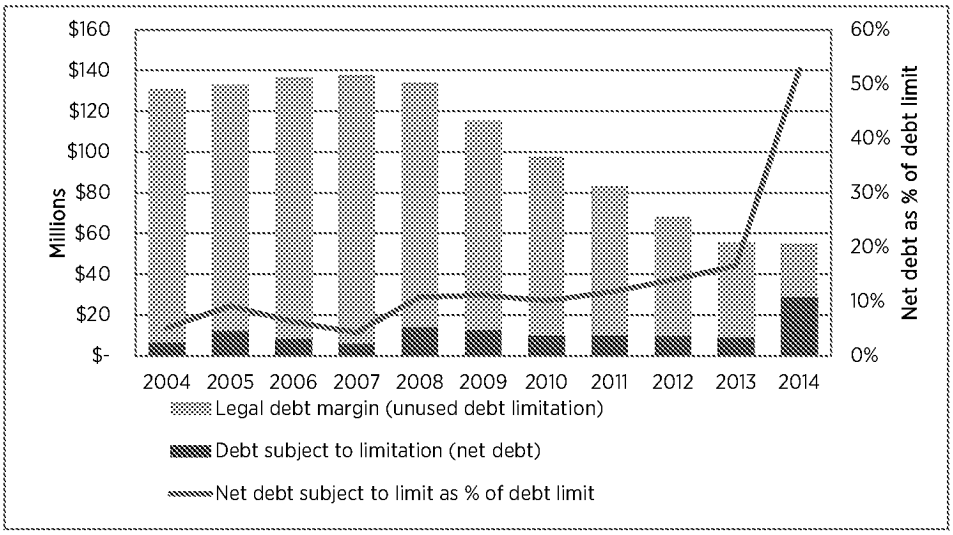
The City of Flint's bond rating has not been updated since the 2011 case study was written. The last bond rating was performed by Moody's Investor Service in February 2006. At that time, the City of Flint was assigned a rating of Ba1 with a stable outlook.

According to the city's financial audit reports, the City Charter limits net debt to 7% of the assessed value of the real and personal property in the city. **Exhibit V-1** discloses breakdown of the city's net debt limit since 2004. While the absolute amount of the city's debt has been fairly stable over time, the decline in property values in the city has closed the legal debt margin considerably (**Exhibit V-1**). As a result, the net debt as a percentage of the debt limit has jumped from about 4.3% in FY2007 to 16.6% in FY2013.

Many cities with chronic fiscal stress have a significantly large debt burden, which has not necessarily been the case for the City of Flint. The 2011 case study noted that this issue of fiscal distress was mainly due to the lack of capacity to issue debt or manage a long-term capital improvement program. In FY2011, the City made its final payment on an $8 million financial recovery bond issued in 2004 when it was operating under the authority of a state-appointed EFM. As noted earlier, the current level of fiscal stress has caused the City of Flint to seek $20 million fiscal stabilization bonds, of which it received $8 million. These funds are intended to address the chronic cash shortage and unfunded prior operating expenditures. Recurring cash shortages and the need to finance prior years' operations are often considered additional red flags indicating chronic fiscal stress.

Another symptom of chronic fiscal stress is an increased reliance on internal borrowing, another trend that has continued since the 2011 case study. When the City of Flint has difficulty obtaining external financing at a reasonable rate, cash from internal funds becomes a default source of borrowing. **Exhibit V-2** summarizes interfund borrowing activity since FY2006. The nature of this type of activity is generally related to operating transactions among funds. The City of Flint has used this to address cash shortages at the close of the fiscal year. The "Due to/from Other Funds" section is related to short-term loans, while the

Exhibit V-1 Flint Long-Term Debt Limit
Data source: City of Flint Comprehensive Annual Financial Reports



"Advances to/from Other Funds" is related to long-term loans. A concern arises when these balances are significant in dollar amounts and present for more than one year. The City of Flint's General Fund has relied on short-term interfund resources for seven out of the last nine fiscal years and long-term interfund resources since FY2012. As shown in **Exhibit V-2**, the primary lending fund for these transfers has been the Sewer Disposal Division Fund, which contributes to the fund's long-term structural deficit, as reported in **Exhibit IV-16** on page 26. The short-term balance of approximately $13.2 million at June 30, 2013, equates to almost 25% of General Fund revenues for FY2014.

In July 2012, the Flint City Council President, along with three other residents, filed a lawsuit against the city, claiming that the water and sewer rate increases in 2011 violated city ordinances.[xx] The claim was that because water and sewer funds have been transferred to the General Fund, additional funds raised had not been allocated toward their intended purposes. A Genesee County Circuit Court judge dismissed the case in June 2013, claiming that the rate increases were in compliance with Public Act 4, which granted legal power to emergency managers to make rate increases to reflect true operating costs.

As noted in the 2011 case study, advances among funds are often formalized in a written note with specific payment terms including an interest rate. The City of Flint has used advances to fund capital equipment purchases in its internal services funds. Such reliance on interfund borrowings may restrict the lending fund's financial flexibility and use of resources for the designated purpose. Recent advances from the Sewer Disposal Division Fund to the General Fund represent return on equity.

VI. Personnel Costs

Annual Earnings and Benefits

The City of Flint's payroll has declined by almost 1,000 full-time equivalent employees, about 63%, since 2001 due to attrition and downsizing (**Exhibit VI-1**). This breaks down to a 59% reduction in public safety employees and a 65% reduction in other city employees. The majority of this reduction has taken place since 2008.

Pension Benefits

The City of Flint has a defined benefit pension plan with a benefit that ranges from 1.7% to 2.6% of the participant's Final Average Compensation (FAC) based on the last three years of credited service, multiplied by the years of credit service based on the date of hire. Employees who retire at or after age 55 with 10 years of credited service (eight years for appointed officials) or those members with 25 years of credited service (23 years for police and fire employees), regardless of their age, are entitled to a retirement benefit. Certain police members can voluntarily retire at age 50 with 25 years of service. Benefits fully vest on reaching 10 years of service with the benefit payable at age 55. The plan requires employee contributions ranging from 0% to 9%.

Beginning in October 2012, the City of Flint closed out its single-employer plan and transferred approximately $270 million of assets to the Michigan Municipal Employees' Retirement System, an agent multi-employer plan that covers substantially all employees of city government. The City of Flint's unfunded pension liability is $241 million, as of its most recent actuarial valuation.

Defined benefit plan pension benefits are determined by following a three-part formula:

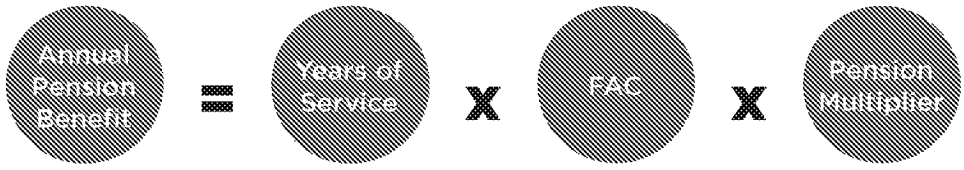

Exhibit VI-1 Flint Full-Time Equivalent Employees
Data source: City of Flint Comprehensive Annual Financial Report

	2001	2002	2003	2004	2005	2006	2007	2008	2009	2010	2011	2012	2013	2014
Total	1526	1227	1114	1081	1066	1105	1135	1190	1003	767	835	717	570	655
Public Safety	693	523	468	478	462	478	482	516	421	288	284	265	281	268
Other	833	704	646	603	604	627	653	674	582	479	551	452	289	387

Years of Service – Years of service is based on actual employee service, although sometimes the employee or employer may "buy" years of service at an actuarially determined cost. Unless this is fully funded in advance, it increases the long-term liability.

Final Average Compensation (FAC) – The final average compensation is the average of wages or salary paid to the employee based on a predetermined number of years. Identifying what type of compensation is included in the FAC is important. If it includes overtime, vacation leave payout, longevity, and other pay items, the cost to the employer increases. When the FAC is determined using fewer years, typically the benefit is higher since it is based on highest years. When the FAC period is very short, even small increases in overtime, compensatory time payout, or accrued leave time payout will increase the pension. This is the reason some retirees' actual pension benefits are higher than their regular full-time pay as active employees.

Pension Multiplier – The pension multiplier represents a percent of pay for each year of service.

A cost of living adjustment (COLA) provides an annual increase in benefit retirement. A COLA benefit of E2 provides a 2% annual increase in pension for retirees. Granting automatic pension increases can further constrain future administrations. Employers typically have a pension plan design where they may instead grant a one-time COLA adjustment to retirees.

The proportion of the Annual Required Contribution (ARC) that the city government has contributed to cover pension expenses has improved over the past several years (**Exhibit VI-2**). For every year since FY2009, the City of Flint has contributed at least the ARC amount.

Flint's pension Unfunded Accrued Actuarial Liability (UAAL) has increased from $194 million in 2006 to $323 million in 2011, which was the time of the last actuarial valuation (**Exhibit VI-3**). The funded ratio fell during this time from 81% to 61%.

Exhibit VI-2 Flint Pension – Actual vs. Annual Required Contribution

Data source: City of Flint Comprehensive Annual Financial Reports

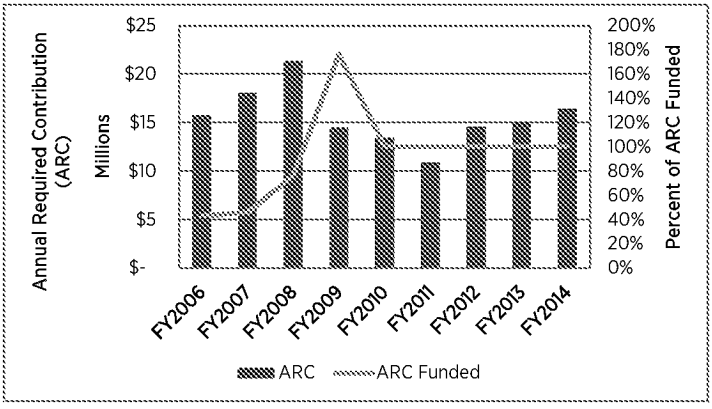

Exhibit VI-3 Flint Pension Funding Status

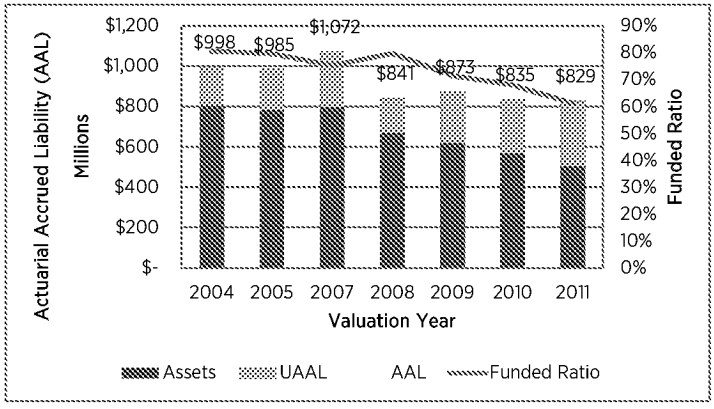
Data source: City of Flint Comprehensive Annual Financial Reports



Other Post-Employment Benefits

The City of Flint contributes to other post-employment benefits (OPEB) for public safety and general employees under collective bargaining agreements of Local 1799, Local 1600, and Fire Local 352. The proportion of the ARC that the city has paid to cover OPEB expenses has improved over the past couple years, from 31% in FY2011 to only 114% in FY2014 (**Exhibit VI-4**).

Since its actuarial valuation in 2006, the City of Flint's unfunded OPEB liability has been cut by $468 million. The city government began advance funding its OPEB plan in FY2012, which has been reflected in its 2012 actuarial valuation. As of this valuation, the plan is 0.1% funded, though that dropped to 0% in the 2013 valuation (**Exhibit VI-5**).

VII. Conclusion

On April 30, 2015, Gov. Rick Snyder rescinded the financial emergency in Flint and restored home rule and the power of the city's elected officials. It had been more than 10 years since the last time such an event occurred in Flint in the summer of 2004. Many questions still continue to swirl around the city's fiscal and economic future. A review of the reforms and changes that occurred since the appointment of an emergency manager in 2011 is a useful starting point for the city to understand the future fiscal trajectory it faces. This review will allow local and state officials to assess the reforms and changes in place and shape the future fiscal policy of the city of Flint, Michigan.

Changes implemented by the four emergency managers appointed to oversee Flint's finances were aimed at reducing the city's considerable budgetary deficit through reducing its financial obligations, especially pensions and other retiree benefits, while increasing city revenue. Some of the most significant changes have impacted the employees and retirees of the City of Flint. These two groups were the most important creditors of the city government. They remain so. Like many city governments in Michigan, Flint does not carry a large debt burden outside of water and sewer borrowing. This means that city retirees and employees are the groups owed the most by the city government and therefore, will be the most directly impacted during a financial reorganization following a fiscal crisis.

The structure of the city government was changed, with staffing reduced by 20%. A city administrator, who will serve as the city's chief administrative officer, was hired on a five-year contract. Among other responsibilities, the city administrator has the authority to negotiate collective bargaining agreements with the city's employee unions.

Reforms were also made to the way the city's budgeting practices, requiring two-year budgeting and three-year financial forecasts to be performed annually. This will allow city officials to identify and potentially deal with budgetary issues before they occur. The city government also adopted a master plan for the first time since the 1960s. The master plan identifies a vision for the city. It was developed with considerable input from the residents of Flint.

The electorate of Flint passed a referendum to have a Charter Review Commission put in place in the summer of 2015. The nine-member commission was elected in May of 2015. It will review the entire charter and assess options for reform. This is an excellent opportunity for the commission and the citizens of Flint to evaluate the current charter and determine a path forward for the city government that includes short-and long-term solvency.

The emergency manager signed a number of final orders before leaving office in April 2015. These orders involved the city council including agenda and meeting dates. They also included setting the special assessment for street lighting, restoring mayor and city council compensation, and adopting a set budget for FY 2016 and 2017. In addition, they included an order ensuring compliance with the so-called hard cap section of PA 152 of 2011 stating that the city shall not pay more than 80% of employee healthcare plans.

The final and perhaps most important order of the Flint emergency manager was issued on April 30, 2015. The overall purpose of the order is to ensure that the mayor and city council shall implement reforms and changes to maintain the fiscal stability of the city government. These provisions included following the recommendations of the Receivership Transition Advisory Board (RTAB) and city administrator. Specific other actions include 1) fully funding the annual pension requirement, 2) not interfering with city employees, 3) observing the budget ordinance, 4) ensuring all local laws are consistent with state laws, 5) not issuing debt without approval of the RTAB, 6) documenting all city liabilities, 7) verifying the appropriate eligibility requirements of all official city positions, 8) acting expeditiously on all economic development projects, and 9) reviewing and acting expeditiously on all intergovernmental cooperation initiatives by the city administrator. All of these provisions are intended to ensure that the city government, as dictated by the mayor and city council, follow certain practices and recommendations that are intended to maintain fiscal stability and solvency. These types of provisions were not in place after the 2002-04 crisis.

The city administrator is also subject to a number of provisions in the final EM order. These provisions include 1) overseeing day-to-day operation of city government, 2) negotiating and recommending changes to bargaining unit contracts to the RTAB, 3) submitting regular reports on city progress, 4) ensuring full compliance with PA 436 of 2012, 5) not removing city administrator without approval of RTAB, 6) observing all purchasing order ordinances, and 7) serving as primary interface between city council and city employees. Again, all of these provisions are meant to ensure the fiscal stability of the city government.

The changes made by the emergency managers have improved Flint's financial position. The general fund deficit was reduced from its peak of over $19 million in FY2012 to just over $8 million in the most recent fiscal year. The city has applied for a $7 million loan from Michigan's Emergency Loan Board, which would effectively eliminate

this deficit. Pension and OPEB liabilities have been significantly reduced, and reforms to employee collective bargaining agreements have reduced future legacy costs. Other cost-saving measures include transferring emergency dispatch to Genesee County and contracting out waste collection.

Despite the progress made since a fiscal emergency was declared in 2011, the City of Flint still faces considerable challenges to its fiscal solvency. Outgoing emergency manager Jerry Ambrose mentioned some of these in his final letter, including the lawsuit filed on behalf of Flint's retirees over changes made to their healthcare benefits, the structural deficit that still exists in the city's financial projections, challenges to fund the city's public safety needs, and the city's ageing infrastructure.

The overall Flint fiscal playbook that has been enacted by the state government and its emergency managers serves as an important template for these types of interventions.[12]

The first part of the playbook is that any reforms or changes must be in reference to the largest component of the fiscal problem, which in this case related to liabilities owed to employees and retirees. Many important changes were made to wages and compensation, pension system benefits, medical benefits and other such liabilities. Of equal or perhaps greater importance, there are a number of safeguards now in place to ensure that these changes remain in place for a long period. Any adjustments to these reforms must go through the city administrator and the RTAB. These safeguards are obviously meant to prevent any backsliding to previous wage or benefit levels. It is this type of activity that led to the most recent crisis, as changes made by the emergency financial manager in 2004 were not kept in place and most of those changes were rescinded by the elected officials between 2004 and 2011. Those changes, combined with the worst recession since the Great Depression, meant that the city faced short- and long-term fiscal insolvency in 2011.

[12] This statement is not meant as recommendation or approval for the state emergency manager law. There are many dimensions upon which the state emergency manager should be assessed. This statement is simply meant to reflect that, in following this path, the Flint experience, with one of the state's largest cities, may be an important reference point.

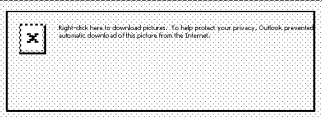
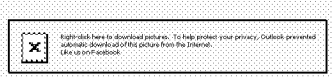
Support MEC



Be Social



Dear Dennis,

The Flint water crisis puts a spotlight on public health and the critical role our state's laws and regulations -- and how they are put into practice -- play in protecting the health of Michiganders.

Last week Governor Snyder appointed me to serve on the after-incident review task force regarding the Flint water issue. Ken Sikkema and I will serve as co-chairs. The Governor was very clear that he wants us to find out what happened and why, and how to prevent any similar situation from occurring in the future. The task force will make recommendations to the administration, including and not limited to, whether laws and regulations need to change

and whether there are practices that need to take place in water systems across the state. We are determined to shine a bright light on this unacceptable tragedy and provide much needed answers.

This week is National Lead Poisoning Prevention Week, and our blog post on the Flint water crisis covers why lead in drinking water is so significant. It gives an overview of the situation in Flint, along with policy changes needed now to restore public trust.

Also this week, the Michigan Department of Environmental Quality's proposed air toxics rule change is now open for public comment. It's our position that companies using chemicals -- and reaping the financial benefits of that use -- should bear the burden of demonstrating they are safe before emitting them into the air we breathe. Instead, the draft rule transfers to those living next to a factory the risk that the chemicals emitted can cause cancer or have other negative health consequences. This change is not acceptable.

When an emergency happens, it's an important and serious duty to review what went wrong and recommend what can make it right. It's even more important to fix our systems -- laws, regulations, and practices -- to protect public health in the first place.

Day in and day out, that is what we work to do at the Michigan Environmental Council.

Sincerely,

Chris Kolb
President

Michigan Distilled

Flint water crisis: Policy changes needed to restore public trust

In what has become a national news story and a full-fledged public health emergency, state officials now acknowledge that unsafe drinking water has exposed children, pregnant women and other Flint residents to dangerous levels of lead. Our blog post identifies some measures the state should take as soon as possible.

The Honorable Rick Snyder
Governor, State of Michigan
George W. Romney Building
111 S. Capitol Avenue
Lansing, Michigan 48933

Dear Governor Snyder:

The Michigan Legislative Black Caucus (MLBC) voted Tuesday to ask that you eliminate the Regional Transition Advisory Board (RTAB) that oversees the city of Flint's finances and operations, and prevents the elected city government from exercising local control.

The RTAB's continued existence denies Flint residents and their duly elected representatives the local control needed to establish and enforce good public policy, and continue to manage the city's finances in a responsible manner. The democratic process is suppressed when elected officials have to constantly seek state approval to implement the programs and policies requested by the constituents.

We recognize that the RTAB serves at your pleasure. Unfortunately, we do not see an end in sight.

Consequently, we are asking that you issue an Order that eliminates the RTAB within the next six months, and allow for an orderly transition of authority back to the locally elected city officials.

Thank you for your attention and consideration in this matter.

Sincerely,

Rep. Sheldon A. Neeley
1 st Vice Chairman,
MLBC

To: Muchmore, Dennis (GOV); Saxton, Thomas (Treasury)
Subject: RE: Flint

Not very soon. They have only been there 6 months and the City now has a very large deficit in the Water Fund. We talked with the new Mayor about it on Tuesday. I will probably be in Flint next week with the Mayor and City Administrator.

B. City of Flint History

Flint is the largest city and county seat of Genesee County in the State of Michigan. It is located along the Flint River, 66 miles (106 km) northwest of Detroit.

According to the 2010 census, Flint has a population of 102,434 an 18% reduction from the 2000 census where it had 124,741 residents. It is the seventh largest city in Michigan. Genesee County comprises the entirety of Flint's metropolitan area, the fourth largest metropolitan area in Michigan with a population of 425,790 in 2010.

Founded as a village by fur trader Jacob Smith in 1819, Flint became a major lumbering area on the historic Saginaw Trail during the 19th century, and incorporated as a city in 1855. It later became a leading manufacturer of carriages and other vehicles earning it the nickname "Vehicle City".

In 1908, William Crapo Durant formed General Motors in Flint, and it was later the home of the Flint Sit-Down Strike of 1936–37 that played a vital role in the formation of the United Auto Workers. After World War II, Flint became an automobile manufacturing powerhouse for GM's Buick and Chevrolet divisions, both of which were founded in Flint. However, by the late 1980s the city sank into a deep economic depression after GM closed and demolished several factories in the area, the effects of which remain today.

In the mid-2000s, it became known for its high crime rates. Since this time, Flint has been ranked among the "Most Dangerous Cities in the United States", with a per capita violent crime rate seven times higher than the national average. The city was under a state of financial emergency from 2011 to 2015, the second in a decade.

On November 3, 2015, Flint residents elected Dr. Karen Weaver as their first female mayor. Mayor Weaver was elected with over 56% of vote.
(Source: Wikipedia)

C. Key Facts and Challenges

- Flint is a prime example of an industrial city that was built around one key industry
- Population is projected to drop 20K between 2010 and 2020 *(source: US Census, American Community Survey)*
- In August 2015, Flint's unemployment was 9.7% which was almost 2 times higher than the national average
- In 2013, Flint had 48 murders, which is over ten times higher than the national average of 4.5 murders per 100,000 residents *(source: city-data.com crime index)*
- In 2013, Flint's crime rate was 810 crimes per 100,000 residents, 2.75 times the national average *(source: city-data.com crime index)*
- 72% of all houses in Flint were built before 1970 *(source: US Census, American Community Survey)*

Road Map to Reinventing Flint:

The Weaver Administration will be laser focused on reinventing Flint and helping grow the economy. The Mayor's Administration will be committed to involving residents, businesses, and workers in the reinvention process in order to craft a common community vision for Flint's future. Collectively, the community working together will be the foundation to making real sustainable progress on the City's toughest challenges. The Administration will develop key initiatives to address Flint's difficult economic situation as well as how to deliver improved services to city residents, including fighting crime. To develop and deliver on these key initiatives the following is in progress:

- Transition Team
- 100 Day Plan outlining key initiatives and deliverables. I.e.:
  - Request City of Flint to get emergency designation for water supply; collaboration with federal and state legislators and the state executive offices
  - Benchmark meetings with other Michigan city administrations
  - Meetings with key stakeholders
  - Conduct Citizen Survey
  - Others
- Immediate Listening Tour (Town Hall Meetings) in the City's nine wards
- Meeting with Director of the Michigan Office of Urban and Metropolitan Initiatives (Harvey Hollins)
- Restructuring plan outlining vision, goals and key objectives
  - Discussions with all City department heads

Top Priorities

Mayor Weaver believes in Flint's future. Her mission now is to restore the public's trust in city government. As such, her top priorities include:

1. **Public Safety** – Safe neighborhoods, working with local law enforcement and state police
2. **Education** – to be a valued partner with Flint Public Schools, higher education and engage other community partners
3. **Economic Development** – Create more and better jobs, collaborating with the private and public sectors, and including Foundations
4. **Clean, Affordable Water** – on behalf of all city residents, working with local, state and federal leadership to improve Flint's water quality and affordability
5. **Citizen Engagement** – ensuring all members of our community are involved in Flint City government and quality of life initiatives
6. **Restore Public Trust** – Mayor Weaver is committed to establish a team with three basic traits: ***competence, capacity and character***

Governance Structure

Mayor Weaver was elected to uphold the Michigan and US Constitution and follow the Flint City Charter.

The City Administrator recently restated her authority regarding Mayoral appointments. In the best interest of the City of Flint residents, Mayor Weaver would like a comprehensive review the current governance structure. The Mayor is committed to charting a path to return Flint to full local governance and establishing a partnership with state government.

- **Shared Responsibility.** In concert with Flint's City Administrator, Mayor Weaver is proposing immediate joint reviews with all department heads in order to evaluate performance and effectiveness. It is essential for the Mayor to be the face of city government. All media interaction should be coordinated with the Mayor's office.

- **Mayoral Appointments.** Mayor Weaver believes in shared responsibility. To fulfill voter mandated requirements, the Mayor desires immediate transfer of some responsibilities and respectfully requests authority for the following appointments:

  1. **Police Chief**
  2. **Fire Chief**
  3. Finance Director
  4. Planning and Development Director
  5. **Public Works Director**

     - Lack of qualification. The current DPW Director failed to control bacteria, total trihalomethanes (TTHM) and lead in water. *(Fonger, R. (2015, November 11), Flint Water Crisis.* The Flint Journal, *http://www.mlive.com/flint-water-crisis)*

  6. **Chief Legal Officer**

     - Liability issues. Performance failure by current City Attorney, including missing appeal deadline; Court of Appeals denied based on 'Untimeliness'. *(See section 5).* The city is already been found liable in court for the illegal water rate hike; the case is pending in the court, 11/13/15 at noon; estimated liability of over $15M.
     - Loyalty is determined by obligation. The City Attorney's loyalty is with the previous Mayor. He has/is making decisions based on politics not by rule of law.
     - Conclusion: there are numerous performance related deficiencies regarding the City Attorney as outlined in the document in section six.

  7. **Chief Personnel Officer**

- **Tier II cabinet positions**. Request authority for: Mayor's assistant, constituent services, communications, equal opportunity/contract compliance and gov't affairs.

Mayor Weaver appreciates the opportunity to discuss these recommendations with Governor Rick Snyder's Team and welcomes an ongoing dialogue concerning Flint's reinvention and a continued partnership with the State of Michigan.

EMERGENCY MANAGER
CITY OF FLINT
GENESEE COUNTY MICHIGAN

ORDER No. 3

CITY ADMINISTRATOR

BY THE POWER AND AUTHORITY VESTED IN THE EMERGENCY MANAGER ("EMERGENCY MANAGER") FOR THE CITY OF FLINT, MICHIGAN ("CITY") PURSUANT TO MICHIGAN'S PUBLIC ACT 436 OF 2012, LOCAL FINANCIAL STABILITY AND CHOICE ACT, ("PA 436"); GERALD AMBROSE, THE EMERGENCY MANAGER, ISSUES THE FOLLOWING ORDER:

Pursuant to PA 436, the Emergency Manager has broad powers in receivership to rectify the financial emergency and to assure the fiscal accountability of the City and its capacity to provide or cause to be provided necessary services essential to the public health, safety and welfare; and

Pursuant to PA 436, the Emergency Manager acts in place of local officials, specifically the Mayor and City Council, unless the Emergency Manager delegates specific authority; and

Pursuant to PA 436, the Emergency Manager has broad power to manage the local government, and may issue orders to elected and appointed officials necessary to accomplish the purpose of the Act. An Order issued under PA 436 is binding on the person to whom it is issued; and

IT IS HEREBY ORDERED:

The City Administrator shall serve as the City's Chief Administrative Officer at the pleasure of the Mayor, City Council and Emergency Manager or Receivership Advisory Transition Board (hereinafter "Board"), in accordance with the provisions of her contact with the City of Flint

dated February 23, 2015, and is charged with implementing executive and legislative directives and policies of the Mayor and City Council, subject to oversight of the Board, including strategic planning and budgeting, and with directing the management of day-to-day-administrative activities and appointed staff officials.

Consistent with the City Administrator Employment Agreement and Position Description, and subject to the approval and directives of the Board, the City Administrator shall have the following authority, duties and responsibilities notwithstanding any provision of the City Charter or Code of Ordinances:

1. Serve, advise and report to the Mayor with respect to the Mayor's executive functions, as set forth in Charter §4-101.

2. Serve and advise the Council with respect to the Council's legislative functions, as set forth in Charter §3-101.

3. Serve, advise and report to the Emergency Manager, as required by Public Act 436, so long as an Emergency Manager is in place.

4. Serve, advise and report to the Board, including:
    a. Advise and report to the Board as required by Public Act 436;
    b. Fully comply and assist the Board in meeting all duties assigned to it by the governor pursuant to MCL 141.1563(h);
    c. Provide all budgetary information requested by the Board;
    d. Serve as the primary contact between the Board and the City, including any department heads, officers, attorneys, accountants, employees, and any other contractors or consultants hired by the City to assist the City Administrator or the City in the discharge of powers, duties, functions, and responsibilities;
    e. Promptly and effectively communicate with the Board regarding any matter that may have a significant financial impact on the City.

5. Direct City department heads in carrying out the daily activities of the City, in the assembly of financial and management information; and in the gathering and assembly of pertinent data and information and recommendations for the Mayor and City Council's consideration in making executive determinations and policy.

6. Translate executive decisions and policies of the Mayor into administrative procedures for the cost effective and efficient operation of the City.

7. Implement legislative action of the City Council.

8. Monitor and manage the administrative inter-activity of the City departments so the delivery of public services represents an efficient, effective, and coordinated effort.

9. Interact with other governmental agencies as requested by the Mayor or City Council.

10. Prepare and review correspondence, reports, speeches, resolutions, and other material for public relations purposes. Answers citizen and official inquiries regarding City policy matters.

11. In consultation with the Mayor, direct the assembly of information and items for consideration by the Council, and provide them to the City Clerk for inclusion on the appropriate agendas.

12. Regularly consult with the Mayor in the development of actions with respect to the Mayor's executive functions, and with matters relating to the daily administrative functions of the City, including the evaluation of the performance of department heads, and the resolution of customer service issues.

13. Except to the extent prohibited by or in material conflict with applicable laws and authorities, the City Administrator or designee shall attend all meetings of the City Council, both public and closed, with the exception of those closed meetings devoted to the consideration of any action or lack of action on, or pursuant to, this Agreement, or any amendment thereto, or the City Administrator's evaluation. The City Administrator shall advise members, and make recommendations consistent with policy objectives, strategic planning and administrative activities.

14. Attend public meetings and events; give presentations and information to the public regarding matters of City business.

15. Manage and oversee all department heads, division heads, managers and non-elected City employees. This shall include an annual written performance evaluation of all department heads, including those identified in paragraphs 15, 16 and 17.

16. Recommend, subject to the Mayor's approval, the following appointments:

    a. Chief of Police;
    b. Fire Chief;
    c. Director of Finance;
    d. Planning & Development Director;
    e. Director of Department of Public Works;
    f. Chief Legal Officer;
    g. Chief Personnel Officer.

17. Recommend, subject to the Council's approval, the following appointments: City Clerk and City Auditor.

18. With the exception of those positions set forth in paragraphs 16 and 17, appoint all department heads, division heads and management positions, including the City Treasurer, Purchasing Director and the City Assessor, subject to any collective bargaining agreement(s) that may be applicable.

19. Ensure that all appointment processes, whether by the Mayor, Council or City Administrator, are open, competitive, and administered by the Human Resources Department or a qualified recruitment firm, with selection of the most qualified candidate to be based on defined education, experience, and professional standards appropriate to the position.

20. All appointments made pursuant to paragraphs 15, 16 and 17 shall serve at the pleasure of the City Administrator based on performance review.

21. Review current and potential litigation and labor disputes with the City Attorney and Mayor, and as needed the Board, and have complete decision making authority on behalf of the City, on all matters of litigation and labor disputes, including the ability to settle or initiate lawsuits and resolve labor disputes. The Mayor and City Council shall be consulted on such matters prior to implementation.

22. Negotiate all collective bargaining agreements on behalf of the City.

23. Work collaboratively with the City Council, the Mayor, other City or State officials and the Board to successfully transition to the termination of receivership for the City by supporting, implementing, and maintaining the financial and operating plans and the reforms instituted by the City's emergency managers, including but not limited to, the financial and operating plan for the city under Section II Act 436, and by providing appropriate training and explanation of City operations.

24. Serve as an official City representative before the Board, State departments and agencies, and the Michigan Legislature, with assistance from the Finance Director and the Mayor.

25. Be responsible for and vested with full authority necessary to effectively direct and supervise the day-to-day operations of the City by seeing that all laws and ordinances are faithfully executed, preparing the proposed annual budget as recommended by the Finance Director and any accounting firm retained by the City, and supervising the expenditures of all sums appropriated to and the attainment of all objectives established for departments of the executive branch of the City and working collaboratively with all officers and officials to effectively execute daily operations.

26. Ensure that a rolling six-year capital improvement plan is annually prepared in accordance with applicable law and the City's Code of Ordinances. Coordinate with the Mayor on the annual preparation of a rolling two-year budget.

27. Review, approve and co-sign with the Mayor all contracts on behalf of and entered into by the City and modify or terminate any current contract with the City.

28. Approve all financial policies, City policies and procedures, job descriptions and personnel policies for the City, after consultation with the Mayor and City Council.

29. Designate check signers on all City bank accounts.

30. Refer City Council communications to the appropriate City employee or investigate such matter(s) and inform the City Council of the results of such efforts. Provided, however, when responding to City Council referrals, the City Administrator shall have discretion to utilize the personnel and resources the City Administrator deems reasonable and so as to avoid unnecessary interruption of services or incurrence of unnecessary costs.

31. Any investigation by the City Council, as contemplated by Charter §3-205 and §3-206, including the power to subpoena witnesses, shall be subject to the City Administrator's review and approval, so as to avoid unnecessary interruption of services or incurrence of unnecessary costs.

32. In the event the Mayor or Council fails to perform any duty or take any required action after having been afforded a reasonable opportunity to do so, the City Administrator may perform the duty or function of the Mayor or Council upon approval of the Board.

This Order may be amended, modified, repealed or terminated by any subsequent Order issued by the Emergency Manager.

ORDER NO. 20

MEASURES TO RECTIFY FINANCIAL EMERGENCY AND ALLOCATION OF RESPONSIBILITIES IN THE EVENT OF THE APPOINTMENT OF A RECEIVERSHIP TRANSITION ADVISORY BOARD

BY THE POWER AND AUTHORITY VESTED IN THE EMERGENCY MANAGER ("EMERGENCY MANAGER") FOR THE CITY OF FLINT, MICHIGAN ("CITY") PURSUANT TO MICHIGAN'S PUBLIC ACT 436 OF 2012, LOCAL FINANCIAL STABILITY AND CHOICE ACT, ("PA 436"); GERALD AMBROSE, THE EMERGENCY MANAGER, ISSUES THE FOLLOWING ORDER:

Pursuant to Public Act 436, the Emergency Manager has broad powers in receivership to rectify the financial emergency and to assure the fiscal accountability of the City of Flint and its capacity to provide or cause to be provided necessary services essential to the public health, safety and welfare; and

Pursuant to Public Act 436, the Emergency Manager acts in place of local officials, specifically the Mayor and City Council, unless the Emergency Manager delegates specific authority; and

Pursuant to Public Act 436, the Emergency Manager has broad power to manage the local government, and may issue orders to elected and appointed officials necessary to accomplish the purpose of the Act; and

Pursuant to Public Act 436, the Emergency Manager is issuing this order to rectify the Financial Emergency and allocate responsibilities in the event of the appointment of a Receivership Transition Advisory Board:

1. The purpose of PA 436, which became effective on March 28, 2013, is to safeguard and ensure the financial accountability of local units of government; to preserve the capacity of local units of government to provide or cause to be provided necessary services essential to the public health, safety, and welfare; to provide for review, management, planning, and control of the financial operation of local units of government and the provision of services by local units of government; to authorize a declaration of the existence of a financial emergency within local units of government; to prescribe remedial measures to address a financial emergency within local units of government; to provide for the appointment and to prescribe the powers and duties of emergency managers for local units of government; and to provide for the termination of a financial emergency within a local unit of government.

2. Section 23 of PA 436 authorizes the Governor, before removing a local government from receivership, to appoint a Receivership Transition Advisory Board (Board) to monitor the affairs of the local government until the receivership is terminated.

3. By letter dated April 28, 2015, I recommended that Governor Snyder appoint a Receivership Transition Advisory Board for the City.

4. In the event that the Governor appoints a Receivership Transition Advisory Board (Board), this Order is issued to facilitate the effective and efficient operation of the City for the duration of the period that the Board is monitoring the affairs of the City and the City remains in receivership. City officials shall be governed by and perform the duties and functions set forth as follows:

   (a) **The Mayor and City Council shall implement all of the following financial best practices within the City and do all of the following:**

      1) Safeguard the financial stability of the City by seeking out, approving, and implementing cost-saving measures recommended by the City Administrator, the Board, or both.

      2) Work with the City Administrator and other City or State officials to successfully transition the City from receivership and eliminate financial stress within the City.

      3) Ensure that the City makes annually required contributions to the City's pension funds. Any changes to the City's pension plans, including an annual

contribution which is less than is actuarially determined, may only be made with the approval of the Board and the State Treasurer.

4) The City Council shall not interfere with the employees of the City. The City Administrator shall be the authorized management contact for all employees.

5) Fill within 120 days and with the approval of the Board, any vacancy in the Office of City Administrator with an individual that meets qualifications outlined in the job position description and established by the Board. Upon such a vacancy the City shall engage a Board-approved and professionally recognized search firm to identify and locate qualified candidates. Without the approval of the Board, neither the City Council nor the Mayor may terminate the City Administrator, or any other City officer or employee.

6) Shall observe the budgetary process as detailed in ordinance. Any budget adoption or subsequent amendment must be submitted for Board approval prior to implementation. The City shall comply with the two-year budget, which the Emergency Manager adopted pursuant to §21(1) of PA 436; however the two-year budget may be amended by approval of the Board and State Treasurer. Proposed budget amendments must be submitted to the Board at the next Board meeting that follows the event or discovery that necessitates the amendment.

7) Adopt ordinances and resolutions not inconsistent with this Order and Michigan law. Ordinances and resolutions are subject to approval of the Board before taking effect, except as otherwise directed by the Board, including but

not limited to, ordinances or resolutions providing for the appointment or reappointment of individuals to City offices.

8) Issue or otherwise incur debt with the approval of the Board. As used in this paragraph, "debt" means that term as defined under the Revised Municipal Finance Act, 2001 PA 34, MCL 141.2101 to 141.2821.

9) Post City Council meeting agendas on the City's website no less than 24 hours prior to each meeting.

10) Document all of the City's outstanding liabilities, including payables and debt obligations. The City shall provide a report on the liabilities to the Board upon request.

11) Adopt or alter policies and procedures for conducting the operations of the City Council, as needed, subject to approval by the Board.

12) Verify the qualifications and eligibility of any individual being considered for appointment or reappointment to the City Council or any other City board, commission, or committee prior to said appointment or reappointment. An individual not eligible for appointment or reappointment shall not be approved.

13) Review not less than annually an inventory of City assets.

14) Review not less than annually a report on business licenses issued by the City.

15) Review licensing fees and all other City fees on an annual basis and make recommendations for any adjustments, subject to approval by the Board.

16) Annually review the status of tax collections and outstanding property taxes owed to the City and report findings to the Board. The City must maintain

adequate assessment records in compliance with state statute, State Tax Commission rules and guidelines, and implement any corrective actions necessary. The City shall implement a full reappraisal within a time frame agreed to with the State Tax Commission.

17) City owned parcels shall be appraised prior to sale and sold by a sealed bid process absent approval by the Board to sell by another method.

18) Review election precinct sites and approve expenses associated with elections, consistent with the budget then in effect for the City.

19) Review and act by resolution on proposed economic or redevelopment projects recommended for approval by the City Administrator. In the event that the City Council fails to approve such a recommended action, the Council shall record the rational for its disapproval in writing and submit this document to the Board within 14 days of the council meeting in which the economic or redevelopment project was voted upon. The Board shall then evaluate the City Administrator's recommendation for the economic or redevelopment project and the City Council's rational against it. The Board shall select the course of action which, in the Board's sole discretion, best serves the interests of the citizens of the City of Flint. If the Board endorses the proposed economic or redevelopment project, the City shall implement it promptly without Council approval.

20) Review and act by resolution on proposed intergovernmental agreements or service consolidation plans recommended by the City Administrator. In the event that the City Council fails to approve such a recommended action, the

Council shall develop and submit an alternate proposal which achieves equal or greater savings to the Board within 14 days of the council meeting in which the proposed intergovernmental agreements or service consolidation plan was voted upon. The Board shall then evaluate the City Administrator's recommendation and the City Council's proposal and select the course of action which best serves the interests of the citizens of the City of Flint. That proposal shall be implemented without Council approval.

21) Comply with local ordinance concerning the purchase of and contract for goods and services.

22) Approve any changes to the job description of the City Administrator, any contract with the City Administrator, and any policies or procedures applicable to the City Administrator with the approval of the Board.

(b) **The City Administrator shall implement all of the following financial best practices within the City and do all of the following:**

1) Fulfill the responsibilities and duties of Emergency Manager Order Number 3, dated April 10, 2015.

2) Be responsible for effectively overseeing the day-to-day operations of the City, consistent with Emergency Manager Orders.

3) Be the sole authority concerning modifications to compensation, including appointed officers and other City employees. This provision does not apply for elected officers within the City.

4) Notwithstanding the provisions of paragraph 20 of Emergency Manager Order No. 3 (issued April 10, 2015), termination of any department head shall require the approval of the Board.

5) Negotiate and recommend approval to the Board proposed collective bargaining agreements, subject to limitations on collective bargaining under MCL 141.1567(3).

6) Submit regular reports to the Mayor, City Council, and Board regarding the overall operation and direction of the City and regularly report on his or her activities to the Mayor, the City Council, and the Board.

7) Serve as the official City representative to the Board on behalf of the Mayor and the City Council.

8) Work with the City Council, the Mayor, and other City or State officials to successfully transition the City from receivership and eliminate financial stress within the City.

9) Ensure that the City is in full compliance with Public Act 436, all Emergency Manager Orders, local ordinances, and applicable state and federal laws.

10) The City Administrator may be removed only in accordance with the provisions set forth by Emergency Manager Orders and the City Administrator's Employment Agreement. Complaints or grievances against the City Administrator from the Mayor or City Council shall be provided to the City Administrator in writing. The City Administrator may not be terminated, suspended, or placed on administrative leave without the approval of the Board.

11) Shall observe and comply with the Purchasing Ordinance, Ordinance #3865 However in the event that the Board documents abuse of the process outlined in ordinance, the Board may resolve to review all purchases over $15,000.00. If this occurs, Board approval is required in addition to approvals required by ordinance.

12) Provide to the Mayor, City Council, and the Board by the 20th calendar day following the end of each month, or when directed by the Board, monthly budget-to-actual reports, balance sheets, and a cash balances report by fund and by bank account, as prepared by the Finance Director. These reports are to be reviewed monthly with the Mayor. Additionally, if requested by the Board, monthly reports shall be submitted to the Board which detail all of the overtime expenses that the City has incurred during the previous 30 days.

13) Provide the Board with a plan to address and resolve all deficiencies reported in the most recent audited financial statements.

14) Serve as the primary contact between the Mayor, City Council, and the employees of the City.

15) Faithfully execute the duties of the City Administrator.

(c) **The Mayor, City Administrator, and City Council shall implement all of the following financial best practices within the City and do all of the following:**

1) Comply with all financial policies and ordinances, including but not limited to, the development and update of the Strategic Plan, Ordinance #3854; Development and Adoption of Biennial Budgets and Three-Year Financial Forecasts, Ordinance #3855; Amendment of Adopted Budgets, Ordinance

#3856; Fund Balance Policy, Ordinance #3851; Budget Stabilization Fund, Ordinance #3853; Other Post-Employment Benefits, Ordinance #3852; and the Purchasing Ordinance, Ordinance #3865. Additionally, continue to adopt, subject to Board approval, any policies and procedures necessary to implement best financial practices by the City.

2) Work with the Board to successfully transition the termination of receivership for the City by supporting, implementing, and maintaining the financial and operating plan and the reforms instituted by the City's emergency managers, including but not limited to, the financial and operating plan for the City and by providing appropriate training and explanation of City operations.

3) Provide to the Board, in a timely manner, any documents, records, or other information requested by the Board or its staff. Appear before the Board to provide testimony, documents, records or other information when requested by the Board or its staff.

4) Per previously adopted Orders, continue to develop and maintain a rolling five-year financial operations plan, in coordination with the City Administrator and City Finance Director, and ensure that the financial operations plan is prepared in accordance with applicable law. The five-year financial operations plan and any subsequent amendments are subject to Board approval.

5) Per previously adopted Orders, continue to develop and maintain a rolling six-year Capital Improvements Plan (CIP), in coordination with the City Planning Commission and ensure that the CIP is prepared annually in accordance with

applicable law. The CIP, and any subsequent amendments, are subject to approval by the Board.

6) Annually budget for and receive training on the Open Meetings Act, effective meeting management and parliamentary procedures, council-manager relations, analyzing financial statements, and reports from professionally recognized organizations. The City will pay for training costs. Budget for and ensure that all planning commissioners, zoning board of appeals members, and members of the board of review annually receive proper training to assist them in the fulfillment of their roles and responsibilities and remove members who fail to receive adequate training.

7) Annually review, upon preparation and adoption of the budget, all fees and make recommendations subject to approval of the Board. Should the City Council fail to adopt a budget by the first (1st) Monday in June, fail to approve a proposed budget amendment in a timely manner, or fail to ratify a fee schedule recommended by the City Administrator, the City Administrator shall present such budget, budget amendment, or fee schedule to the Board for approval, and the Board may approve the budget, budget amendment, or fee schedule on behalf of the City.

8) Continue to implement any steps necessary to successfully complete the district court consolidation process.

9) Take all steps necessary to successfully establish, develop, and complete the Karegnondi Water Authority (KWA) project.

10) Take action at the same meeting on all items duly submitted by the City Administrator to the City Council agenda unless the City Administrator agrees that the items should be postponed to the next subsequent meeting.

11) All City elected officials, officers, and employees shall abide by all State regulations and statutes.

(d) **Limitations upon the City Council, Mayor, and the City Administrator:**

1) The City Council, Mayor, or City Administrator shall not revise any Order that was implemented by the Emergency Manager during his or her term prior to one year after the termination of receivership. Amendments to Emergency Manager Orders may be made pursuant to the procedures identified in Section 5.

2) There shall be no funding for the Office of the Ombudsman or the Civil Service Commission.

5. Except as otherwise provided in this paragraph, the power to rescind or amend any order issued by the Emergency Manager shall rest solely with the Board, with approval by the State Treasurer, to the extent permitted under PA 436. This Order may be amended, modified, repealed, or terminated by a subsequent Order issued by an Emergency Manager.

6. This Order amends all previous Emergency Manager Orders to the extent that they are inconsistent.

7. This Order shall have immediate effect.

PRELIMINARY INJUNCTION

At a Session of Said Court
Held in the Courthouse
On the 7th Day of August, 2015

PRESENT HONORABLE ARCHIE L. HAYMAN, CIRCUIT COURT JUDGE

THIS MATTER, having come on to be heard by Plaintiffs' Motion for Issuance of a Preliminary Injunction, the City of Flint having responded thereto, the Court having read the same, taken testimony, and received exhibits into evidence, in Open Court, and being otherwise duly advised in the premises;

IT IS THEREFORE ORDERED AND ADJUDGED that Plaintiffs' Motion for Issuance of a Preliminary Injunction be and the same is hereby **GRANTED** for the reasons stated on the Record in Open Court, which include the following:

1. The September 16, 2011 35% water and sewer rate increases, that have been collected by the City of Flint between September 16, 2011 and the date hereof, were not implemented in conformity with Flint City Ordinances 46 – 52.1 and 46 – 57.1.

2. The water readiness to serve charges that have been collected by the City of Flint from September 16, 2011 to the date hereof are not calculated nor authorized in accordance with Flint City Ordinance 46 – 52.

3. The July 1, 2012 12.5 % water rate increase and 45% sewer rate increase implemented by Emergency Manager Michael Brown under Public Act 4 of 2011 were implemented in conformity with Flint City Ordinances 46 – 52.1 and 46 – 57.1.

4. Following the rejection of Public Act 4 of 2011 there was no Order signed by any later Flint Emergency Manager that adopted or implemented the September 16, 2011 water and sewer rate increases and the July 1, 2012 water and sewer rate increases.

5. The liens placed against the real property of the City of Flint's delinquent water and sewer customers were due to delinquencies caused by the September 16, 2011 and July 1, 2012 water and sewer rate increases and the charging of the water readiness to serve charges from September 16, 2011 to the date hereof.

6. The City of Flint has disconnected the water service for its delinquent water and sewer customers due to their failure to pay delinquencies caused by charges related to the September 16, 2011, July 1, 2012, water and sewer rate increases, and water readiness to serve charges.

IT IS FURTHER ORDERED AND ADJUDGED that the City of Flint, its agents, employees, servants, attorneys, and those other persons in active concert or participation with it, be and the same are hereby **ENJOINED, pursuant to MCR 3.310,** from the following actions, until further Order of this Court:

1. Charging and collecting a water readiness to serve charge, also known as the water service charge from its water and sewer customers until it comes into compliance with Flint City Ordinance 46 – 52.
2. Charging and collecting water and sewer rates that include the September 16, 2011 35% rate increases.
3. Disconnecting the water service for its delinquent water and sewer customers wherein the delinquency arose between September 16, 2011 and the date hereof.
4. Placing any further liens against the real property of its delinquent water and sewer customers for delinquencies that occurred between September 16, 2011 and the date hereof.
5. Taking any monies from the Water Supply Fund, which include the water and sewer funds/payments, and using those monies to pay general obligations.

IT IS FURTHER ORDERED AND ADJUDGED that no Security is required of Plaintiffs herein as this matter is in the public interest as the actions of the City of Flint that are being enjoined are actions that Defendant City of Flint has been engaged in since September 16, 2011, which violated its own Ordinances.

IT IS FURTHER ORDERED AND ADJUDGED that the parties are to meet and negotiate the repayment of 15.7 million dollars to the Sewer fund by the General Fund and are to return to this Court on November 13, 2015 if they are unable to reach agreement on the return of the 15.7 million dollars to the Sewer Fund.

The parties are to provide this Court with their proposals for repayment of the 15.7 million dollars to the Sewer fund, by October 31, 2015, if they are unable to reach an agreement on the process of repayment of the 15.7 million dollars to the Sewer fund by the General Fund.

The City of Flint shall immediately establish funds for its water and sewer funds, also known as the Water Supply fund, that are in compliance with the Revenue Bond Act of 1933 as recited by the Court in open Court, and provide the Court with proof of the same by 9/30, 2015.

The City of Flint shall provide proof to this Court and Plaintiffs' Counsel that it is no longer using water and sewer funds/payments to pay general obligations by 9/30, 2015.

The Finance Department of Defendant City of Flint shall prepare a document/report that creates for this Court a history of the expenditures for the Sewer fund between 2007 and 2013 that reflects how those expenditures would have occurred if

the 15.7 million dollars had not been transferred to the General Fund/Lawsuit Settlement Fund, and provide the same to the Court and Plaintiffs' Counsel by 9/30 2015.

The issue of Emergency Manager Brown's July 1, 2012 12.5% water rate increase and 45% sewer rate increase is hereby preserved until the Court has reviewed the document/report prepared by the City of Flint's Finance Department.

IT IS FURTHER ORDERED AND ADJUDGED that the parties shall attend a Pre-Trial Conference for this case to be held on November 13, 2015 at 12:00 PM.

This is not a final Order and does not dispose of all of the issues in this case.

IT IS SO ORDERED.

ARCHIE L. HAYMAN, P37516

Peter Bade – City of Flint Chief Legal Officer – Performance Deficiencies

1. In the lawsuit of *Scott Kincaid et. al vs City of Flint*, Michigan Court of Appeals Number 318906 his office missed the September 3, 2015 filing date for their Application for Leave to the Michigan Supreme Court. **Exhibit 1**

2. In the same lawsuit when it was still in Genesee County Circuit Court under case number 12-098490-CZ the plaintiffs first raised the issue that the City of Flint was illegally collecting its water service charge, in violation of its ordinance 46-52, **Exhibit 2** on December 28, 2012 when they filed a motion asking for leave of the Court to file a First Amended Complaint. Attached to the motion was a proposed First Amended Complaint that contained the allegations about the illegal collection of the water service charge, in violation of ordinance 46-52. Peter Bade did not look into those allegations at that time, or if he looked into them he did not advise the Emergency Manager to issue the required resolution, chart, and to file them with the City Clerk, thereby increasing the amount of money that the plaintiffs are now seeking in the Larry Shears case by **$28,546,994.90**. **Exhibit 3**

3. When Mayor Walling illegally increased the water and sewer rates and service charges by 22% in January 2011 Peter Bade, as the City of Flint's Chief Legal Officer did not advise the Mayor that those increases were in violation of Flint City Ordinances 46 – 52.1 and 46-57.1. **Exhibit 4**

4. When Mayor Walling illegally increased the water and sewer rates and service charges by 35% in September 2011 Peter Bade, as the City of Flint's Chief Legal Officer did not advise the Mayor that those increases were in violation of Flint City Ordinances 46 – 52.1 and 46-57.1. **Exhibit 4**

5. When Emergency Manager Michael Brown issued his Order Number 31 on May 30, 2012 "ratifying" the September 16, 2011 35% water and sewer increases **Exhibit 5** Peter Bade failed to advise Manager Brown that the word "ratify" did not appear in Public Act 4 of 2011, the law that gave him his powers as an emergency manager. **Exhibit 6 – Pages 8 and 9**

6. Peter Bade failed to advise the Mayor or any Emergency Mangers that using the restricted water and sewer monies to pay general obligations was a violation of the Michigan Revenue Bond Act § 141. 262. **Exhibit 7**

7. Peter Bade hired Miller Canfield to represent the City of Flint in the Larry Shears lawsuit after 9/2/15, when he was made aware that they were one of the targets for funding settlement of the water refund lawsuits. **Exhibit 8**

8. Peter Bade failed to secure the permission of class counsel, Val Washington to send notices about the Larry Shears case to water and sewer customers. **Exhibit 9**

LOCAL FINANCIAL STABILITY AND CHOICE ACT (EXCERPT)
Act 436 of 2012

141.1563 Receivership transition advisory board.

Sec. 23. (1) Before removing a local government from receivership, the governor may appoint a receivership transition advisory board to monitor the affairs of the local government until the receivership is terminated.

(2) A receivership transition advisory board shall consist of the state treasurer or his or her designee, the director of the department of technology, management, and budget or his or her designee, and, if the local government is a school district, the superintendent of public instruction or his or her designee. The governor also may appoint to a receivership transition advisory board 1 or more other individuals with relevant professional experience, including 1 or more residents of the local government.

(3) A receivership transition advisory board serves at the pleasure of the governor.

(4) At its first meeting, a receivership transition advisory board shall adopt rules of procedure to govern its conduct, meetings, and periodic reporting to the governor. Procedural rules required by this section are not subject to the administrative procedures act of 1969, 1969 PA 306, MCL 24.201 to 24.328.

(5) A receivership transition advisory board may do all of the following:

(a) Require the local government to annually convene a consensus revenue estimating conference for the purpose of arriving at a consensus estimate of revenues to be available for the ensuing fiscal year of the local government.

(b) Require the local government to provide monthly cash flow projections and a comparison of budgeted revenues and expenditures to actual revenues and expenditures.

(c) Review proposed and amended budgets of the local government. A proposed budget or budget amendment shall not take effect unless approved by the receivership transition advisory board.

(d) Review requests by the local government to issue debt under the revised municipal finance act, 2001 PA 34, MCL 141.2101 to 141.2821, or any other law governing the issuance of bonds or notes.

(e) Review proposed collective bargaining agreements negotiated under section 15(1) of 1947 PA 336, MCL 423.215. A proposed collective bargaining agreement shall not take effect unless approved by the receivership transition advisory board.

(f) Review compliance by the local government with a deficit elimination plan submitted under section 21 of the Glenn Steil state revenue sharing act of 1971, 1971 PA 140, MCL 141.921.

(g) Review proposed judgment levies before submission to a court under section 6093 or 6094 of the revised judicature act of 1961, 1961 PA 236, MCL 600.6093 and 600.6094.

(h) Perform any other duties assigned by the governor at the time the receivership transition advisory board is appointed.

(6) A receivership transition advisory board is a public body as that term is defined in section 2 of the open meetings act, 1976 PA 267, MCL 15.262, and meetings of a receivership transition advisory board are subject to the open meetings act, 1976 PA 267, MCL 15.261 to 15.275. A receivership transition advisory board is also a public body as that term is defined in section 2 of the freedom of information act, 1976 PA 442, MCL 15.232, and a public record in the possession of a receivership transition advisory board is subject to the freedom of information act, 1976 PA 442, MCL 15.231 to 15.246.

History: 2012, Act 436, Eff. Mar. 28, 2013.

Compiler's note: Enacting section 2 of Act 436 of 2012 provides:

"Enacting section 2. It is the intent of the legislature that this act function and be interpreted as a successor statute to former 1988 PA 101, former 1990 PA 72, and former 2011 PA 4, and that whenever possible a reference to former 1988 PA 101, former 1990 PA 72, or former 2011 PA 4, under other laws of this state or to a function or responsibility of an emergency financial manager or emergency manager under former 1988 PA 101, former 1990 PA 72, or former 2011 PA 4, under other laws of this state shall function and be interpreted to reference to this act, with the other laws of this state referencing former 1988 PA 101, former 1990 PA 72, or former 2011 PA 4, including, but not limited to, all of the following:

(a) The charter township act, 1947 PA 359, MCL 42.1 to 42.34.

(b) 1966 PA 293, MCL 45.501 to 45.521.

(c) 1851 PA 156, MCL 46.1 to 46.32.

(d) The general law village act, 1895 PA 3, MCL 61.1 to 74.25.

(e) The home rule village act, 1909 PA 278, MCL 78.1 to 78.28.

(f) The fourth class city act, 1895 PA 215, MCL 81.1 to 113.30.

(g) The home rule city act, 1909 PA 279, MCL 117.1 to 117.38.

(h) The metropolitan transportation authorities act of 1967, 1967 PA 204, MCL 124.401 to 124.426.

(i) 1947 PA 336, MCL 423.201 to 423.217."

Hi Dennis: Some time ago I obtained former Treasurer Andy Dillon's appointment calendar, under FOIA.
On March 25, 2013, at 5 p.m., it lists: "Call with Dennis Muchmore regarding Flint Water Supply Alternatives."
Later that evening, the city council of Flint, which was under a state-appointed emergency manager, voted to switch its water supply from the city of Detroit to a new Karegnondi Water Authority.
Can you please call me to discuss your/the state's role in that decision?
Also, for another time, maybe in December, would love to do an exit interview before you leave your current post.
Thanks, Paul

Hi Andy: Why did the state and city opt to go with KWA for Flint water supply when the study you commissioned from Tucker, Young, Jackson, Tull found that going with KWA would be more costly than staying with DWSD? (Here is excerpt from p. 17):

"Based on the analysis, it is prudent to assume the KWA water supply option costs would be somewhere between the KWA-1 and KWA-2 options. Therefore, the analysis indicates that the two DWSD options of supplying 8 MGD on a maximum day and up to 8 MGD on average are the least cost options for Flint. These options allow Flint to maximize the use of existing assets; the City of Flint's (the Flint WTP) and DWSD's (the existing 72-inch main)."

How would you describe your role in the chain of decisions that led to Flint drawing its water supply from the Flint River?

The Flint City Council opted to go with the KWA on the evening of March 25, 2013. Your schedule shows you had a 5 p.m. phone conversation at 5 p.m. that day with Dennis Muchmore "regarding Flint Water Supply alternatives."

The next day, March 26, 2013, your schedule shows a 9 a.m. meeting at Treasury "regarding Flint water, a 1:30 p.m. phone call with Dan Wyant "regarding Flint/KWA," and a w p.m. meeting in Lansing with Flint Mayor Dayne Walling?

What do you recall about these conversations/meetings? Did Muchmore sign off on the switch to KWA on behalf of the governor?

Thanks, Paul Egan

Governor Snyder,

In the interest of being sensitive to the unforeseen problems that will affect children of this Flint Water Crisis, I am formally requesting you to forgive the debt balance currently imposed on the Flint Community Schools. I make this request because this school district will have the majority burden of addressing issues relating to the lead intrusion into the blood of children in this school system. There will be untold problems for years to come that will require an already overwhelmed school district to be required to meet the needs of these children who are victims of this disaster.

Respectfully,

Sheldon Neeley
State Representative
34th District

Subject: PRESS RELEASE - Flint Emergency Manager's Statement on Residents' Water Concerns
Attachments: Flint Water Statement 010915.pdf

For Immediate Release

Emergency Manager Statement on Residents' Flint River Water Concerns

Flint, Michigan – January 9, 2015 – The City of Flint's Emergency Manager Darnell Earley today released a statement regarding residents' Flint River water safety concerns following the distribution of the total trihalomethanes violation letter:

"Suggestions have been made that the City of Flint should return to using water purchased through the Detroit Water and Sewerage Department (DWSD). For many reasons, financial and otherwise, the City of Flint can ill-afford to switch courses at this point. Thus, we will continue to follow the guidelines and directives of the Michigan DEQ in the implementation of our water quality plan and operational report, until the KWA water source is available. The estimated cost to go back to the water provided by the DWSD is approximately $1 million per month and the City expects to be using the Karegnondi Water Authority (KWA) Lake Huron water within the next eighteen months. It is not financially prudent to spend $18 million to purchase water that meets the same DEQ standards as the water now available from the Flint River.

However, because of the concerns raised by the public, as well as the city council and our state legislative delegation, we want to make sure that the Flint water treatment operation is doing everything it can to address the challenges outlined in the recent violation notice issued by the State Department of Environmental Quality (DEQ). We will be seeking river water management consultants with extensive treatment expertise to work with the Flint Utilities Department staff to assure that best practices are being used for treatment and

distribution of the Flint River water. This is a much better use of the City's limited funds than trying to pursue a course back to DWSD."

For Immediate Release

Emergency Manager Statement on Residents' Flint River Water Concerns

Flint, Michigan – January 9, 2015 – The City of Flint's Emergency Manager Darnell Earley today released a statement regarding residents' Flint River water safety concerns following the distribution of the total trihalomethanes violation letter:

"Suggestions have been made that the City of Flint should return to using water purchased through the Detroit Water and Sewerage Department (DWSD). For many reasons, financial and otherwise, the City of Flint can ill-afford to switch courses at this point. Thus, we will continue to follow the guidelines and directives of the Michigan DEQ in the implementation of our water quality plan and operational report, until the KWA water source is available. The estimated cost to go back to the water provided by the DWSD is approximately $1 million per month and the City expects to be using the Karegnondi Water Authority (KWA) Lake Huron water within the next eighteen months. It is not financially prudent to spend $18 million to purchase water that meets the same DEQ standards as the water now available from the Flint River.

CITY OF FLINT

Dayne Walling
Mayor

January 18, 2015

The Honorable Rick Snyder
Governor, State of Michigan
P.O. Box 30013
Lansing, MI 48909

RE: Flint Water Improvement Plan

Dear Governor Snyder:

On behalf of the Flint community, I am writing to convey serious concerns about water quality and to request your support for my proposed Flint Water Improvement Plan. Access to safe and clean water is a basic human right, and, therefore, policy and budget decisions need to ensure that water is affordable and secure for everyone in Flint and all across Michigan It is essential there is City, State and Federal cooperation to address the challenges here and to meet the needs of vulnerable populations.

The Flint Water Improvement Plan is focused in five areas: safety, quality, access, investment and education. The plan puts safety and quality first because this is fundamental. It is designed to be a sustainable solution for the City of Flint and the community as we move towards a new permanent water supply from Lake Huron through the Karegnondi Water Authority. My plan offers new ideas and also builds on successful models of utility, energy and assistance programs at the State and Federal levels.

Safety & Quality

- 100% Safety is the standard
- City of Flint reports testing data to the public to assure safety and expands testing sites and frequency
- Bring on experienced river water treatment operational management in the City of Flint

Access

- Announce an amnesty program for Flint water service turn-ons and reduce the turn-on fee
- Develop a revised affordable payment plan policy to encourage customers to return
- Design Federal and State partnership to establish new Drinking Water Emergency Assistance Fund for the elderly and vulnerable families

Investment

- Accelerate water system improvements outlined in the City of Flint Capital Improvement Plan through Federal and State investments
    - State approves City of Flint's Distressed Cities Fund applications

- Federal and State support for replacement or forgiveness of payment to the Drinking Water Revolving Loan Fund due to Flint's status as a distressed community
- Federal and State grants for infrastructure improvements in alignment with the Flint Master Plan

* City Water Department implements budgeted FY15 projects including leak detection, valve repairs, new pipes and meter replacements

Education

* Develop a community partnership with universities to provide household and business customers with information on testing and conservation
* Ongoing partnership with Michigan Department of Human Services, United Way, Salvation Army and community organizations to provide information and water assistance with the Keep the Water Flowing Fund and support services
* Expand youth energy initiative to assist households with conservation and efficiency (piloted in summer 2014 with Northwestern High School students, EcoWorks and Consumers Energy)

It is also critical to restore the public confidence in Flint Water. The implementation of this plan must be accompanied by extensive community engagement including local elected officials. My objective is to work with you and your appointed officials, State Senator Ananich, State Representatives Phelps and Neeley, Congressman Kildee, community groups, businesses, churches, foundations, the Flint City Council, and all of the City of Flint and government personnel.

It is imperative that we communicate better and provide residents more information. I understand representatives from the Michigan Department of Environmental Quality will be joining a public forum this week at City Hall. This engagement going forward is vital so thank you for supporting their efforts. I think this issue of transparency is important for communities all across the State. I recommend a review of the applicable laws and policies and, at a minimum, a new requirement that water testing data be reported publicly no less than quarterly by law in all Michigan communities in Flint's population category.

Thank you for the consideration Governor. There is nothing more important in Flint right now than fixing the water problems. We must work together to identify funds to repair and update the water treatment facilities and city-wide infrastructure and to help those persons without access to clean water so that the entire Flint community has sustainable, safe, secure and affordable water now and into the future. This is an important issue for the state of our State of Michigan and I urge you to work with us to implement solutions.

Sincerely,

Dayne Walling, Mayor
City of Flint

CC: Flint City Council President Joshua Freeman; Congressman Dan Kildee; State Senator Jim Ananich; State Representative Sheldon Neeley; State Representative Phil Phelps; Flint Emergency Manager Jerry Ambrose

Only problem with that is that the citizens of Flint say they are paying more now than they did when they were connected with DWSD. The city, after all, is not giving the water away free right now, so there is some kind of equalization that comes into play here. Additionally, we just gave them $2M so if we need to use it for a reconnect that's probably a good use of the money as opposed to people refusing to use city water. Since we're in charge, we can hardly ignore the people of Flint. After all, if GM refuses to use the water in their plant and our own agencies are warning people not to drink it, another expressing continuing concern over quality, and the differential between what we now collect and what we would pay DWSD is not significant, we look pretty stupid hiding behind some financial statement.

Subject: RE: pastor harris

Would add that the city (Earley, Ambrose, etc.) have been unequivocal that doing so would cost at least $1m per month…per the DWSD "offer"…and the city simply cannot afford that.

I have also heard that the city no longer owns a section of pipeline that would have to be used in making any re-connection…making that more difficult and expensive.

>
> To reiterate some key points so we're all clear:
>
> 1. DEQ does not inspect individuals' homes in a situation like this. It's the city's system, their operators handle all complaints and maintenance. In fact, our folks alerted me that the city's got union rules in place forbidding any contractor from touching the system.
> 2. DEQ's role is limited to ensuring the plant is operating to state standards and the water it produces meets potability standards. The aesthetic issues drawing concern from residents – color, odor, taste – stem from a variety of things. Age of the system and prolonged lack of upkeep is the leading factor. But in some areas, another contributing factor is changes in water flow – source used to come from the south, now comes from the north, so some pipes are flowing in reverse, stirring up whatever was settled for a long time. In some sections, large pipes that historically served large communities are now serving a much smaller customer base, contributing to water stagnating in the system. In some areas, household connections are old and worn, so two neighbors may be having dramatically different experiences. My point is, the challenge takes many forms and there's no single solution that will bring sweeping change. The two consultants hired by the city have, as I understand it, both reinforced this idea in their assessments, so that's good.
>
> 3. The fix for this will be years in the making, truly. Even if full funding were available, 'big dig' projects can't all happen at once. The city needs to get an assessment of its infrastructure so it can prioritize its needs, and I understand they're working on that. In the near term, maintenance this spring / summer –

things like cleaning the pipes in key sections and flushing the system via the hydrants -- could offer some short term results. I know nobody wants to just wait for spring, but that is something important to keep in mind.

4. In the meantime, the group discussed possibly making home water filters available somehow. The National Safety Foundation is a Michigan company, headquartered and founded in Ann Arbor, that develops standards for all kinds of infrastructure. They're a globally recognized source for standard setting. A look at their site reveals there are myriad filtration options on the market and within each type (faucet mounted, whole house line filters, etc) there are filters that focus on different aspects of purification.

   If this idea begins to get legs, I'd suggest testing some different models on the local water at the customer level to see if they work. I'd also suggest the idea be focused on tap-mounted models to promote clean, appealing drinking water. And I'd suggest this program could be funded in whole or in part by the state, but would need to be administered by the city (reinforcing the fact that they own, operate and service the system). I've got some information on filter models below.

   Two more considerations: One, while the state has provided residents in some communities with bottled water in the past, it always has to do with their water being somehow contaminated -- as in, some kind of chemical plume that impaired local drinking water sources. This would be the first time the state took steps to deal with what is an aesthetic issue on a system where the water is meeting state drinking water standards.

Water filter info:
ANSI NSF Standard 42 Covers bacteriostasis, taste and odor (associated only with chlorine removal), and other aesthetic conditions
http://standards.nsf.org/apps/group_public/download.php/19895/NSF_42-11%20-%20watermarked.pdf

ANSI NSF Standard 53 Covers health effects removal
http://standards.nsf.org/apps/group_public/download.php/19896/NSF_53-11a%20-%20watermarked.pdf

It is important to note that the filters are not required to meet all aspects of the standard, only the portions they want to make claims for. So product information for each filter must be reviewed to determine its applicability.

Most of these point of use filters are basic activated carbon filters that simply remove taste and odor specifically associated with chlorine, not other things like iron, manganese, hydrogen sulfide, etc. that can also impact taste and odor as well as color.

It is important to recognize that taste and odor is generally an individual preference and such standards have for the most part not been developed because groups of individuals may still consider taste and odor issues to exist even after levels for such a standard have been met.

Other considerations are that the test water for such filters attempting to meet the standard uses hardness levels of 170 mg/L or less. Flint's water at times may be above this level, which could then impact filter performance and longevity.

Most of these filters are designed to be replaced after 100 gallons or less of use, a period of about 3 months for most households. In addition the tests allow for initial pressure drops of up to 15 psi. This may limit use in households that already rely on minimum pressure within their household plumbing.

Regarding the health effects standards, as the Flint water system already meets such requirements, with the exception of the current TTHM locational running annual average, there is little point to the use of these filters for such a purpose.

To the point you'd asked about the other day, while Flint and Detroit are leading examples of unmaintained infrastructure, Flint is not alone by any means.

This recent infrastructure report card
http://www.infrastructurereportcard.org/michigan/michigan-overview/
Lists Michigan with a $13.8 Billion need over the next 20 years.

http://www.infrastructurereportcard.org/a/#p/state-facts/michigan

Here's a link to the 2009 Report Card for Michigan Infrastructure
http://www.michiganreportcard.com/

From the report:

"A significant portion of the state's primary distribution system is nearing 100 years old. CWS are facing a significant challenge to maintain the vast network of aging, underground infrastructure. Within the city of Detroit alone, approximately 80% of its distribution piping was installed prior to 1940, which is not unusual for CWS in Michigan."

"The age of the majority of the state's distribution system is the primary contributor to normal decay and failure. In many cases, pipe life has far exceeded useful service life. Much of the older water systems consist of undersized mains constructed of materials such as unlined cast iron pipe. Minor fluctuations in system flows or pressure may cause red water complaints and even result in pipe failure. All CWS should have routine flushing and valve maintenance programs; however many are hesitant due to the time and cost."

"Under the Stage 2 Disinfection Byproducts Rule, all CWS that disinfect are required to provide increased trihalomethane (THHM) and haloacetic acid (HAA5) monitoring due to the potential byproducts of chlorine reactions within the pipe system. Corrosion, scale, solid suspension on the interior sidewall of pipe, in addition to the age and condition of the system will require diligent rehabilitation investment to maintain system integrity."

"While better materials and advanced technology is available to replace the aging distribution system, resources remain scarce when compared with the magnitude of the rehabilitation task at hand. Too often, distribution system replacement costs are underfunded and the first item to be slashed when budget problems arise. Overall, distribution system maintenance is reactionary in much of the older systems. Since the majority of the antiquated system will require removal and replacement beyond the

CWS funding resources for systematic upgrade, a reactionary rehabilitation program is inevitable and must be funded accordingly."

Call or email me if you need anything further.

We (Treasury) think we can restructure the drinking water loans the City currently has. Essentially this means deferring the upcoming April & Oct principle payts. [We can't forgive their loans nor extend the maturities].

I am rounding the numbers… originally they had 4 loans totally $40+mm. The current amt outstanding is about $20mm. The cash benefit of deferring the principle payts is approx. $2.1mm.

I had talked to Jerry A. re where they would use the money. One possibility would be the consultant they are looking hire. The other is to pay for that pipeline replacement he talked about.

I talked to Jim Sygo @ DEQ to see if they had any issues because they are responsible for the program side. He checked with his staff. They had some concerns about opening up 'Pandora's Box' i.e., other distress communities would want to do this. But at the end of the day I think they
would ok the deferral particularly if you (the Gov's office) supported it. Jim had left me a v-mail so I can get back to him Monday to really confirm.

No, we are not extending the maturity. We are simply making them pay more in a later timeframe.

Sounds like the best solution. In essence you are extending the maturity because it extends the debt repayment schedule.

Follow Up Flag: Follow up
Flag Status: Flagged

Would add that the city (Earley, Ambrose, etc.) have been unequivocal that doing so would cost at least $1m per month...per the DWSD "offer"...and the city simply cannot afford that.

I have also heard that the city no longer owns a section of pipeline that would have to be used in making any re-connection...making that more difficult and expensive.

> Dennis – the attached pdf is the memo & table that hopefully addresses some of the info needs stemming from the meeting with the pastors last week. Jerry A. has looked at this document as well. In terms of key items at this point (that are mentioned in the memo)….

KWA may be hooked up by the end of this calendar year; weather permitting, etc. Even allowing for some slippage that is positive news

Whether you hooked to DWSD thru the county or directly; it is a $1mm add'l impact to the budget… an add'l 30% increase in rates over existing

They have $2mm already baked in the budget to fix that two mile 'bad' section of pipeline that might address a good portion of the current issues

They now have an outside consultant on the ground who is suppose to provide some preliminary indications next week to help improve the situation

Don't forget about the $2mm SRF loan restructuring (which we have not officially put on the table). Those $s would be available for more system improvements.

Again, sorry this took as long as it did. Let us know if this is what you had in mind or if you need anything else. Wayne – chime in if I missed anything.

See you @ 1:30

1. EXECUTIVE SUMMARY

1.1 BACKGROUND OF THE STUDY

On November of 2013, the City of Flint ("City") engaged Raftelis Financial Consultants ("RFC") to perform water and wastewater utility rate studies. The scope of services included the following:

- Evaluate the adequacy of existing water and wastewater revenues to meet each utility's projected revenue requirements
- Develop comprehensive water and wastewater financial plans based on sound financial management practices for a 10 year forecast period
- Determine water and wastewater rates which adequately recover the cost of operating the water and wastewater utilities under the existing rate structures and provide alternatives based on a comprehensive cost of service study
- Analyze the impact of transitioning from the use of purchased potable water from the Detroit Water and Sewerage District ("DWSD") to the treatment of raw water from the Karegnondi Water Authority ("KWA").
- Review the City's water and wastewater operations in comparison to Best Management Practices criteria.

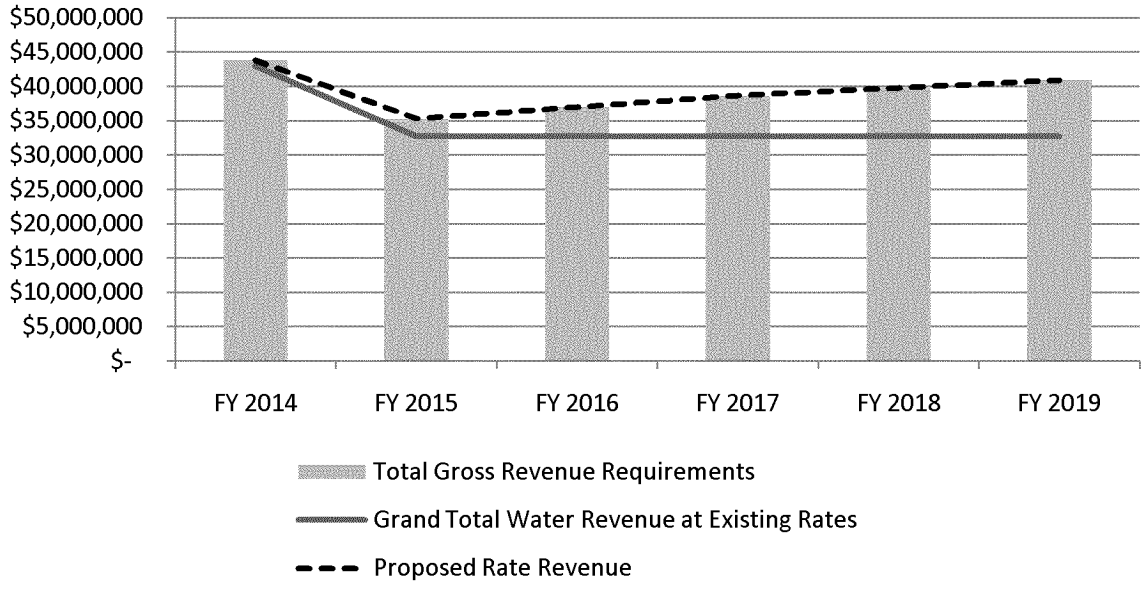
1.2 ADEQUACY OF EXISTING WATER AND WASTEWATER REVENUES

Charts ES-1 and 2 below summarize our conclusions with respect to the adequacy of water and wastewater revenue at existing rates. As the charts indicate, beginning in FY 2015, water and wastewater utility revenues are insufficient to recover each utility's revenue requirement. Key drivers of this disparity are:

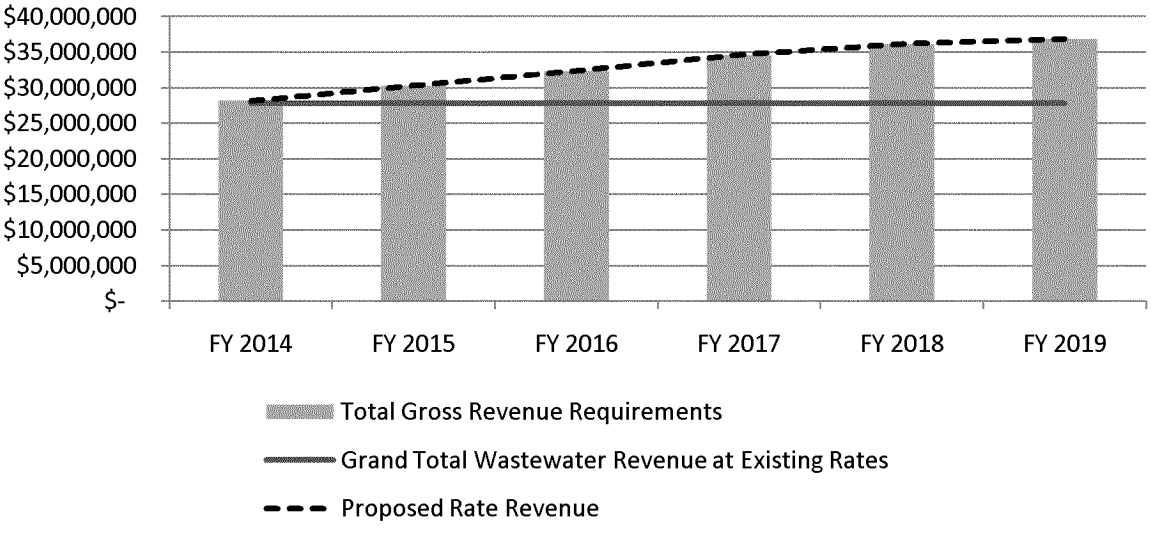
- A marked decrease in billed usage, the cause of which is currently being evaluated by RFC under a separate contract.
- A normal pattern of declining per customer usage for both utilities overall due to conservation, efficient appliances, etc.
- Increases in utility revenue requirements associated with the financial plans including operating cost inflation, capital improvements and policies which support the sound financial management of each utility in accordance with best management practices.

Consequently, the proposed increases in rate revenue are necessary to ensure each utility can adequately fund its operation and maintenance expenditures, make payments on existing debt service, provide funding for needed capital improvements and ensure adequate operating reserves.

ES-1: Water Utility Revenues at Existing Rates



ES-2: Wastewater Utility Revenues at Existing Rates



1.3 WATER AND WASTEWATER FINANCIAL PLANS

Tables ES-3 and ES-4 below summarize the proposed water and wastewater financial plans and rate revenue increases for the first 5 years of the forecast period.

The financial plans and proposed increased in rate revenues are driven by the following factors:

- Inflationary increases in O&M expenditures for both utilities
- For the water utility:
    - Decreases in revenues associated with the cessation of service to Genesee County
    - Decreases in O&M expenditures associated with an elimination of DWSD water purchases
    - Increases in O&M expenditures associated with transitioning from back-up to primary operation of the Flint WTP
    - Increases in capital expenditures associated with improvements to the Flint WTP in preparation for the treatment of raw water from KWA
    - Increases in debt service associated with Flint's share of projected KWA debt service
- Necessary cash funded recapitalization of wastewater utility assets
- A build-up, for each utility, of operating reserves equivalent to 90 days of projected O&M expenditures and debt service payments, the minimum, according to financial management practices ("BMP").

ES-3: SUMMARY OF WATER AND WASTEWATER FINANCIAL PLANS

Water Utility	Budget Year FY 2014	Test Year FY 2015	Forecast FY 2016	Forecast FY 2017	Forecast FY 2018	Forecast FY 2019
REVENUES						
Grand Total Water Revenue at Existing Rates	$ 42,974,374	$ 32,732,575	$ 32,762,575	$ 32,762,575	$ 32,762,575	$ 32,762,575

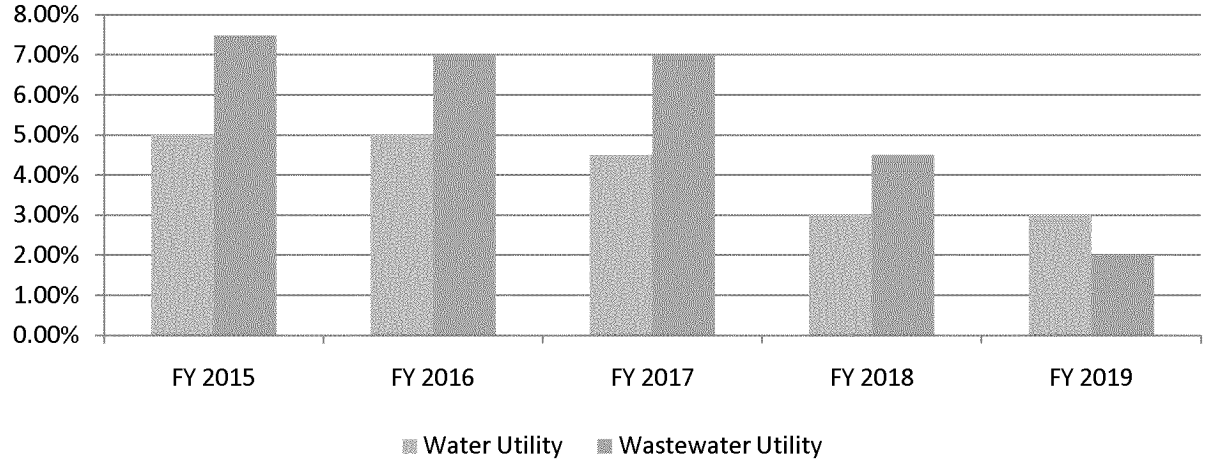
ES-4: Annual % Rate Revenue Increases



As indicated in the previous section, water and wastewater utility revenues at existing rates are not adequate to recover the projected costs each utility will incur over the forecast period. Consequently additional rate revenue will be needed to ensure adequate recovery of each utility's revenue requirements.

1.4 COST OF SERVICE STUDY AND WATER AND WASTEWATER RATES

Table ES-5 below summarizes the results of the water and wastewater cost of service studies. The customer classes included are those which are recognized in the City's existing customer information system ("CIS"). While the City does not currently have either a water or wastewater rate structure which recognizes these customer classes, rates by customer class have been calculated and are included as appendices A and B to this report. The totals for each customer class represent the contribution of that class to the overall costs of each utility. This is based on the allocation processes described in sections 4 and 5 of this report.

Given the transition from KWA to DWSD the City will not be making any rate structure changes at this time. It is our opinion that the current water and wastewater rate structures are reasonable. The declining block water rates generally recognizing the fact that higher volume customers (i.e. large commercial and industrial) contribute less to peak demand, and overall water utility costs. Additionally, the relatively high proportion of fixed charge revenue recovery provides a less climatically variable revenue stream, which given that the majority of the utility's costs are fixed, is entirely appropriate.

ES-5: SUMMARY OF COST OF SERVICE STUDY RESULTS

CUSTOMER CLASS	WATER	WASTEWATER
Allocated Cost of Service		
Total Inside City Residential COS	$ 18,345,672	$ 16,412,799
Total Inside City Commercial/Industrial COS	$ 15,263,704	$ 13,378,697
Total Inside City Lawn COS	$ 370,646	N/A
Total Inside City COS	$ 33,980,022	$ 29,791,496
Total Outside City Residential COS	$ 99,483	$ 2,382
Total Outside City Commercial/Industrial COS	$ 321,169	$ 66,796
Total Outside City Lawn COS	$ -	N/A
Total Outside City COS	$ 420,653	$ 69,178
Total System Cost of Service	$ 34,400,675	$ 29,860,674

Tables ES-6 and ES-7 summarize the projected fixed and volumetric rates for the first 5 years of the forecast period, given financial plans and rate revenue increases proposed above. For every dollar of rate revenue generated by each utility approximately $.66 is derived from volumetric charges and $.34 is derived from fixed charges.

It is typical for water and wastewater utilities to design fixed charges which recover, at a minimum, the costs of meter reading, billing and collection and customer service. Additionally, fixed charges may also relate to fixed investment in utility assets associated with providing service which is available at all times regardless of usage levels by City customers. These costs, known as readiness to serve costs, have also been incorporated into the water and wastewater fixed charges.

Volumetric rates recover the variable costs associated with operating the water and wastewater utilities. For the water utility variable costs are associated with water treatment, transmission and distribution, pumping, and storage and are driven primarily by the design requirements associated with peak water usage. For the wastewater utility variable costs are associated with wastewater treatment, collection, and pumping, and are driven by the wastewater volume and strength.

ES-6: SUMMARY OF WATER AND WASTEWATER VOLUMETRIC RATES

1.5 TRANSITION FROM DWSD TO KWA

A key aspect of this study involved analyzing the impact of the anticipated April 1, 2014 transition from the Detroit Water and Sewerage District ("DWSD") to the Karegnondi Water Authority ("KWA"). The expectation is that the transition will strengthen the water utility's financial position going forward, by affording the City greater control over its operating and capital costs. As part of this engagement the City asked RFC to estimate the potential savings to a typical Flint customer as a result of transitioning from DWSD to the KWA.

A summary of the potential savings, based on an alternative water financial planning scenario is summarized in Table ES-8 below. For example, a City customer using 5 CCF per month would see a combined monthly bill of approximately $122.83 under the KWA. This is based on a 5% water rate increase over existing rates. That same customer, should the City continue receiving service from DWSD, is estimated to have a bill of approximately $127.70. This represents estimated 13% water rate increase over existing rates. Consequently, the savings to the typical City is approximately $4.87 per month, or $58.44 per year. Finally, note that the cumulative water rate increase over the next 5 years is estimated to be 18% under the KWA and 41% under DWSD.

ES-8: POTENTIAL RESIDENTIAL BILL SAVINGS (KWA VS. DWSD)

Cumulative Increase KWA (Water Rates)	**0%**	**5%**	**10%**	**15%**	**19%**	**22%**

1.6 WATER AND WASTEWATER UTILITY OPERATIONS AND BEST MANAGEMENT PRACTICES

We reviewed the City's water and wastewater utility performance in relation to Best Management Practices ("BMP") that have been published by Fitch Ratings ("Fitch"). These criteria are used by Fitch when reviewing the performance of a utility as part of the bond rating process. Table ES-9 below summarizes our assessment of the City's water and wastewater utility operations with respect to BMP. The City's operations generally comport with BMP. The City is working to improve consistency in four areas: first, as mentioned above, the financial plans build-up to the minimum recommended 90 operating reserve and should achieve this reserve, all else equal, in the next 5 years. Second, the City is working with RFC, under a separate contract, to identify sources of lost water and wastewater revenue to improve the City's revenue collections, and reduce the cost of utility service theft to paying customers. Third, the City is currently determining arrangements whereby the general fund can repay its obligations to the water and wastewater utilities, ensuring the water and wastewater funds are not subsidizing general government operations going forward. Finally, the transition to KWA will allow the City greater control over its operating and capital costs, and as mentioned above, should result in more affordable rates than the alternative.

2. INTRODUCTION AND STUDY OBJECTIVES

2.1 INTRODUCTION

In November of 2013, the City of Flint ("City") engaged Raftelis Financial Consultants ("RFC") to perform water and wastewater utility rate studies. The need for engagement was precipitated by the City's transition from the use of purchased water from the Detroit Water and Sewerage District ("DWSD") to participation in the Karegnondi Water Authority ("KWA") on April 1, 2014. Following the transition, the City will treat raw water from the KWA at its existing water treatment plant, which is currently undergoing the improvements necessary to become the primary source of treated water for the City of Flint. The expectation is that the transition will strengthen the water utility's financial position going forward, affording the City greater control over its operating and capital costs as a result.

From a financial perspective, the following are a few notable aspects of the transition:

- Water Operation and Maintenance ("O&M") expenditures are projected to decrease significantly as the cost of purchasing water from DWSD ceases as of FY 2015,
- Water Capital costs are projected to increase as the City begins paying its share of the Karegnondi Water Authority's debt service and incurs the cost of the necessary water treatment plant improvements.
- Water utility revenues will decrease as the City's wholesale customer, Genesee County ("County"), will no longer be receiving water service from the City as a result of the transition
- Projected water increases under the KWA are projected to be lower than they would have been, had the City continued to purchase water from DWSD
- City of Flint residential customer water bills are projected to be lower under the KWA than if the City had continued to purchase water from DWSD (see Table 1 below).

TABLE 1: ESTIMATED RATE INCREASES (KWA VS. DWSD)

CUMULATIVE % RATE REVENUE INCREASE	FY 2014	FY 2015	FY 2016	FY 2017	FY 2018	FY 2019

2.2 RATE STUDY OBJECTIVES

The objectives of this study are as follows:

- Evaluate the adequacy of existing water and wastewater revenues to meet the projected revenue requirements
- Develop comprehensive water and wastewater financial plans based on sound financial management practices for a 10 year forecast period
- Determine water and wastewater rates which adequately recover the cost of operating the water and wastewater utilities under the existing rate structures and provide alternatives based on a comprehensive cost of service study
- Evaluate the City's current financial position and adjust the comprehensive financial plans for both the mid-year transition to the KWA and going forward.

3. WATER AND WASTEWATER UTILITY FINANCIAL PLANS

3.1 THE FINANCIAL PLANNING PROCESS

The general objective of the financial planning process is to arrive at the level of water and wastewater rate revenue required to ensure the financial sustainability of each utility on a going forward basis. This revenue requirement is then distributed to each customer class as part of the cost of service study.

For this study financial plans were developed for the current fiscal year, the test year and a ten-year forecast period. The current year is typically the year in which the study occurs, in this case fiscal year 2014 ("FY 2014"), or the year ending July 30, 2014. For the current year the financial plans represent an estimate, for each utility, of year-end financial position.

This serves as the basis for the test year financial plan. For this study, the test year is the following fiscal year, FY 2015. While the current year serves as an estimate of each utility's current financial position, the test year represents a projection of utility revenues, expenditures and operating reserve levels. The ten-year forecast period allows the City to evaluate trends over time and evaluate the impact of challenges that occur beyond the test year. For the purposes of this study separate financial plans were developed for each utility to ensure that each would be self-sustaining.

The following steps are necessary to arrive at the test year revenue requirement for each utility:

- Forecast customer units of service and revenue at existing water and wastewater rates
- Forecast operation and maintenance expenditures ("O&M") for each utility
- Forecast capital expenditures, including the payment of existing water and wastewater debt service and the financing of planned capital improvements
- Develop detailed cash flow forecasts summarizing planned O&M and capital expenditures, recommended rate revenue increases and operating reserve levels

3.2 WATER UTILITY FINANCIAL PLAN

3.2.1 Forecast Water Units of Service and Revenue at Existing Rates

Water Utility Rates

The City recovers the cost of operating the water utility via volumetric rates (rates based on the amount of water used) and fixed monthly service charges (a charge per customer bill). The City's existing water volumetric charge is a declining block rate, or a rate that decreases on a per unit basis as the amount of water consumed increases. The existing water volumetric rate structure is shown in Table 2 below:

TABLE 2: EXISTING WATER VOLUMETRIC RATES

CUSTOMER CLASS	CONSUMPTION BLOCK	UNITS	FY 2014 Existing Block Rates
Total Inside City All Classes			
Inside City Block 1	0-35 CCF	($/CCF)	$ 7.52
Inside City Block 2	36-2000 CCF	($/CCF)	$ 7.31
Inside City Block 3	above 2000 CCF	($/CCF)	$ 5.79
Total Outside City All Classes			
Outside City Block 1	0-35 CCF	($/CCF)	$ 11.26
Outside City Block 2	36-2000 CCF	($/CCF)	$ 10.77
Outside City Block 3	above 2000 CCF	($/CCF)	$ 8.68

A distinction is made between customers residing within in the City of Flint, and those who receive City water service, but do not reside within the City. As Table 2 indicates, outside city volumetric rates are approximately 150% of inside city volumetric rates. This is a common policy for municipal water utilities and recognizes inside city customers as "owners" of the utility, who should be compensated for the risk of investing in and maintaining their utility system.

In addition to the volumetric rates, the existing water rate structure includes a fixed service charge which varies by customer water meter size. The rates are charged per customer bill and are shown in Table 3 on the following page.

TABLE 3: EXISTING WATER FIXED CHARGES

CUSTOMER CLASS	FY 2014 Proposed Fixed Charge
Inside City Residential Customers	
5/8'	$ 21.78
3/4'	$ 41.86
1"	$ 55.20
1-1/2'	$ 55.28
2"	$ 55.28
Inside City Commercial/Industrial Customers	
5/8'	$ 50.09
3/4'	$ 51.20
1"	$ 75.10
1-1/2'	$ 107.76
2"	$ 160.62
3"	$ 207.45
4"	$ 520.50
6"	$ 1,059.43
8"	$ 1,492.88
10'	$ 2,060.75
12'	$ 2,483.12
16'	$ 3,102.64
20'	$ 3,951.10
Outside City Residential Customers	
5/8'	$ 32.48
3/4'	$ 62.71
1"	$ 82.79
1-1/2'	$ 82.79
2"	$ 82.79
Outside City Commercial/Industrial Customers	
5/8'	$ 60.10
3/4'	$ 61.72
1"	$ 112.87
1-1/2'	$ 161.79
2"	$ 226.09
3"	$ 448.47
4"	$ 765.37
6"	$ 1,543.87
8"	$ 2,259.47
10'	$ 3,107.48
12'	$ 3,739.61
16'	$ 4,663.87
20'	$ 5,463.02

Most Flint residential customers have a 5/8" meter and currently pay the $21.78 fixed monthly service charge. For the monthly fixed charge the same distinction is made between inside and outside city customers, with the outside city charge set at approximately 150% of the inside city

charge. Additionally, the current fixed charge structure further distinguishes between residential commercial customers.

In addition to the retail rates discussed above, the City currently serves a wholesale water customer, Genesee County. Genesee County pays a commodity charge of $346,863, a fixed monthly service charge of $114,000 and a volumetric rate of $1.30 per CCF. As mentioned above, as of April 1, 2014, the County will no longer be a customer of the City.

Forecast Water Units of Service

In order to forecast the level of revenue under existing water rates, the number of water accounts at each meter size and the level of water consumption in each consumption block must be estimated for the forecast period.

The number of accounts at each meter size was determined by dividing the number of annual bills at each meter size by the 12 monthly billing periods. The number of historical and forecast water utility customer accounts, by meter size, is indicated in Tables 4 and 5 on the following two pages. Note that the historical data appear to indicate a 14% increase in inside city accounts and a 27% increase in outside city accounts from FY 2012 to FY 2013. This increase in accounts does not appear to have been sustained into FY 2014. The City has indicated that water and wastewater billings have decreased approximately 12% from FY 2013 to FY 2014 year to date. Given this change and for the sake of developing a conservative estimate we have adjusted the forecast level of water accounts to 13% below their FY 2013 level. As no significant growth in the City's customer base is expected, no growth in water utility accounts has been projected over the forecast period.

In addition to forecasting the number of accounts by meter size, the level of water consumption in each consumption block must be estimated for the forecast period. The historical and forecast level of water consumption by customer class and block is indicated in Tables 6 and 7 on the following two pages.

Note that—consistent with the significant increase in inside city water accounts in FY 2013—inside city water consumption has increased significantly in FY 2013 (18%). Given the uncertainty surrounding the increase in billed consumption in FY 2013, and the subsequent decrease in billed revenues in FY 2014, we have forecast retail consumption at 6% below FY 2013 levels for FY 2014, FY 2015 and the remainder of the ten year forecast period.

As noted above, the City anticipates discontinuing DWSD water service as of April 1, 2014. At that point Genesee County will no longer be a wholesale customer of the City. Therefore the forecast of the County's consumption has been adjusted to account for the final 3 months of FY 2014 (i.e. April, May and June) during which the City will not be providing water service to the County.

Forecast Water Revenue at Existing Rates

Water utility revenue at existing rates is the sum of the volumetric and fixed charge revenue. Fixed charge revenue at existing rates was determined by multiplying the number of forecast accounts at each meter size, by the existing rate for that size and again by 12, for each of the monthly bills. Volumetric revenue was determined by multiplying the level of consumption in each consumption block, by the existing rate for that block. Table 8 on the following page summarizes the level of water revenue at existing water rates.

The total level of water revenue at existing rates in FY 2014 is forecast to be approximately $43 Million. Of this, around 70% is derived from the volumetric rates and 30% is associated with the fixed monthly service charges. In FY 2015, the level of revenue at existing rates is forecast to decline to approximately $32 Million. This change can be attributed to the loss of Flint's existing wholesale customer Genesee County, which will occur as a result of the City's discontinuing DWSD water service. On a going forward basis, the level of revenues at existing water rates would remain at 32 Million assuming consumption and account growth remain flat and the City makes no adjustments to water rates.

3.2.2 Forecast of Water Operation and Maintenance Expenditures

Water O&M Inflation Rates

The budgets provided by the City are the basis for the forecast of water utility O&M expenditures. Given that the transition from DWSD to KWA involves significant shifts in budgetary expenditures on a relatively detailed level, the City provided uninflated estimates of budgeted O&M expenditures for FY 2014 through FY 2017. To forecast the level of water utility O&M expenditures that the City would incur over the forecast period we applied the escalation rates shown in Table 9 below.

TABLE 9: WATER O&M ESCALATION RATES

The rates shown above were developed based on discussions with City staff, and our experience with similar utilities.

Forecast Water Utility Operation and Maintenance Expenditures

Tables 10 and 11 on the following page indicate the estimated level of water utility O&M expenditures over the forecast period, both by the escalation rate categories and by department.
In FY 2014, the largest O&M expenditures related to the "Water Plant-Operations" department within which the bulk water purchases from DWSD were included. Note that this amount decreases significantly in FY 2015 and going forward as the City transitions from DWSD to KWA. Excluding purchased water, the most notable expenditures are associated with personnel: Wages and Salaries, Benefits, Pension, and the City's share of retiree healthcare benefits ("Cost Alloc. Plan-Expense"). In general, water O&M expenditures are projected to decrease from around $36 Million currently to $21 Million in FY 2015 with inflationary increases thereafter.

3.2.3 Water Utility CIP and CIP Financing

Tables 12 and 13 on the following two pages indicate the water capital improvements program ("CIP") provided by the City and the CIP financing plan.

As the plan we received from the City was presented in current year dollars, we escalated the project amounts 3% per year from FY 2015 onward. The largest capital improvements in dollar terms are associated with the rehabilitation of the City's water treatment plant (i.e. Water Plant-Phase II projects). These projects are in large part associated with transitioning the City's water treatment plant from back-up status to the primary source of treated water for the City. As discussed above, the improvements to the water treatment plant will allow the City to treat raw water purchased from the KWA for distribution to City customers. In general, the level of spending in the CIP decreases from $10 Million to $7.5 Million as the plant improvements are completed and increases again in the out years due to planned annual recapitalization.

There are three items of note in Table 13. First, all projects are projected to be cash financed at this time. The City may seek to leverage its revenue stream in the future via use of the State of Michigan's ("State") Drinking Water Revolving Revenue Fund ("DWRRF") loan program. This would be particularly beneficial for major water capital improvements, as it would spread the financing responsibility over existing and future ratepayers who receive the benefit of the improvement throughout the asset's useful life. Second, note that the proceeds from the recently completed sale of the Flint pipeline to Genesee County have been included to offset the costs of the treatment plant improvements. Finally, note that the "uses" category includes a line for additional uses, which represent the KWA initiation payments required of the City until it begins paying its share of KWA debt service in FY 2017.

3.2.4 Water Cash Flow Forecast

The final step in the development of the water utility financial plan involves the preparation of a comprehensive cash flow forecast. A summary of the water cash flow forecast is presented in Table 14 on the following page. The key components of the forecast are Financial Plan Inputs, Revenues, Expenditures, and Operating Performance.

- The Financial Plan Inputs component indicates the forecast rate revenue increases. These increases were determined in consultation with City staff and are designed to:
- Ensure recovery of O&M expenditures and existing water utility debt service
- Provide cash financing for the capital projects outlined in the CIP including those necessary to transition from DWSD to the KWA
- Minimize the risk associated with operating a climate dependent enterprise via the build-up of operating reserves equivalent to 90 days of O&M and Debt Service

The Revenues component indicates the revenue at existing rates discussed previously, non-rate revenue and the additional revenue generated by the rate revenue increases shown in the inputs section. Given the forecast of water demand, O&M and capital expenditures and the 90 Day operating reserve benchmark, the "additional revenue" line represents the amount of revenue needed—above existing rate revenues –-to ensure adequate recovery of the water utility's revenue requirement in each year of the forecast.

The Expenditures component indicates the major sources of expenditures for the City's water utility: O&M expenditures, Capital expenditures (Rate Revenue Financing and Debt Service) and Transfers to the Operating Reserve.

The Operating performance component indicates the year end position of the water utility with respect to a few key factors. Included are the estimated operating reserve balance, the target reserve balance (90 Days of O&M and Debt Service), the construction fund ending balance and the water utility's debt service coverage ratio.

3.3 WASTEWATER UTILITY FINANCIAL PLAN

3.3.1 Forecast Wastewater Units of Service and Revenues at Existing Rates

Wastewater Utility Rates

The City recovers the cost of operating the wastewater utility via volumetric rates (i.e. rates based on the amount of wastewater discharged) and fixed monthly service charges (a charge per customer bill). The City's existing wastewater volumetric charge is a uniform rate, or a rate that does not vary (on a per unit basis) as the amount of wastewater discharged varies. The existing wastewater volumetric rate structure is indicated in Table 15 below. Similar to the water utility volumetric rate structure a distinction is made between inside and outside city customers, with the outside city rate set at approximately 110% of the inside city rate.

TABLE 15: EXISTING WASTEWATER VOLUMETRIC RATES

CUSTOMER CLASS		Test-Year FY 2014 Existing Rates
Total Inside City All Classes	($/CCF)	$ 4.80
Total Outside City All Classes	($/CCF)	$ 5.29

The existing wastewater rate structure includes a fixed service charge which varies by customer water meter size. The rates are shown in Table 16 on the following page. Most Flint residential customers have a 5/8" meter and currently pay the $32.00 fixed monthly service charge. Similar to the wastewater volumetric rate, the wastewater fixed charges include an inside outside city differential (120%).

In addition to the retail wastewater rates, the City currently serves a wholesale wastewater customer, Beecher Metropolitan District ("District"). The District currently pays $1.34 per CCF of wastewater discharged, an amount that was negotiated in the 1995 Contract between the City and the District.

TABLE 16: EXISTING WASTEWATER FIXED CHARGES

16"	$ 5,457.91
20"	$ 6,502.02

Forecast Wastewater Units of Service

In order to forecast the level of revenue expected under existing wastewater fixed and volumetric rates, the number of wastewater accounts and the level of wastewater usage must be estimated for

the forecast period. The number of historical and forecast wastewater utility accounts is indicated in Tables 17 and 18 on the following two pages.

Note that the raw billing data appear to indicate a 14% increase in inside city accounts and an 18% increase in outside city accounts from FY 2012 to FY 2013. This increase in accounts does not appear to have been sustained into FY 2014. The City has indicated that wastewater billings have decreased approximately 12% from FY 2013. Given this change we have adjusted the forecast level of wastewater accounts to be around 13% less than their FY 2013 level. As no significant growth the City's customer base is expected, no customer growth has been forecast on a going forward basis.

TABLE 17: FORECAST INSIDE CITY WASTEWATER ACCOUNTS

In addition to forecasting the number of accounts by meter size and customer class, the level of wastewater usage must also be estimated for the forecast period. The historical and forecast level of wastewater usage by customer class can be on Table 19 on the following page.

Note that—consistent with the significant increase in inside city water accounts in FY 2013—inside city wastewater usage has increased significantly in FY 2013 (18%). Given the uncertainty surrounding this most recent upswing in billed wastewater usage, and the subsequent decrease in billed wastewater revenues, retail usage has been forecast at 15% below FY 2013 levels for FY 2014, FY 2015 and the remainder of the ten year forecast period.

Forecast Wastewater Revenue at Existing Rates

Wastewater utility revenue at existing rates is the sum of wastewater volumetric and fixed charge revenue. Fixed charge revenue at existing rates was determined by multiplying the number of forecast accounts at each meter size, by the existing rate for that size and again by 12 for each of the monthly bills. Volumetric revenue was determined by multiplying the level of consumption by customer class, by the existing volumetric rates. Table 20 on the following page indicates the level of wastewater revenue at existing rates.

Total wastewater revenue at existing rates in FY 2014 is forecast to be approximately $27 Million. Of this, approximately 54% is derived from the volumetric rates and 46% is associated with the fixed monthly service charges. On a going forward basis, the level of revenues at existing wastewater rates would remain at $27 Million assuming consumption remains flat and the City makes no adjustments to wastewater rates.

3.3.2 Forecast Wastewater Utility Operation and Maintenance Expenditures

Wastewater O&M Inflation Rates

The budgets provided by the City are the basis for the forecast of wastewater utility O&M expenditures. To forecast the level of wastewater utility O&M expenditures that the City is projected to incur over the forecast period we applied escalation rates shown in Table 21 below.

Forecast Wastewater Operation and Maintenance Expenditures

Tables 22 and 23 on the following page indicate level of wastewater O&M expenditures over the forecast period, by the escalation rate categories and by department.

Unlike the water utility there is no single large cost driver. The most notable expenditures are associated with personnel: Wages and Salaries, Benefits, Pension, and the City's share of retiree healthcare benefits ("Cost Alloc. Plan-Expense"). In general, wastewater O&M expenditures are projected to decrease from 24 Million in FY 2014 to 23 Million in FY 2015 with inflationary increases thereafter.

3.3.3 Wastewater Utility CIP and CIP Financing

Tables 24 and 25 on the following two pages indicate the wastewater capital improvements program ("CIP") provided by the City and the CIP financing plan. As the plan we received from the City was presented in current year dollars, we escalated the project amounts 3% per year from FY 2015 onward. The largest capital projects relate to rehabilitation of the City's wastewater treatment plant and pumping stations. In general, the level of spending in the CIP peaks at from $12 Million in FY 2018 and returns to an average level of around $8 Million going forward.

Table 25 summarizes the wastewater utility CIP financing plan. While the CIP financing plan used for this report only incorporates cash financing, the City may seek to leverage its revenue stream in the future via the issuance of revenue bonds or other alternative financing instruments. This would be particularly beneficial for major wastewater capital improvements, as it would spread the financing responsibility over existing and future ratepayers who receive the benefit of the improvement throughout the asset's useful life.

3.3.4 Wastewater Cash Flow Forecast

The final step in the development of the wastewater utility financial plan involves the preparation of a comprehensive cash flow forecast. A summary of the wastewater cash flow forecast is presented in Table 26 on the following page. The key components of the forecast are Financial Plan Inputs, Revenues, Expenditures, and Operating Performance.

The Financial Plan Inputs component indicates the forecast rate revenue increases. These increases were determined in consultation with City staff and are designed to:

- Ensure recovery of wastewater utility O&M expenditures
- Provide cash financing for the wastewater capital projects outlined in the CIP
- Minimize risk via the build-up of operating reserves equivalent to 90 days of O&M and Debt Service

The Revenues component indicates the revenue at existing rates discussed previously, non-rate revenue and the additional revenue generated by the rate revenue increases shown in the inputs section. Given the forecast of wastewater demand, O&M and capital expenditures and the 90 Day operating benchmark, the "additional revenue" line represents the amount of revenue needed—above existing rate revenues—to ensure adequate recovery of the wastewater utility's revenue requirement going forward.

The Expenditures component indicates the major sources of expenditures for the City's wastewater utility: O&M expenditures, Capital expenditures (Rate Revenue Financing and Debt Service) and Transfers to the Operating Reserve.

The Operating performance section indicates the year end position of the wastewater utility with respect to a few key factors. Included are the estimated operating reserve balance, the target reserve balance (90 Days of O&M and Debt Service), and the construction fund ending balance.

4. WATER UTILITY COST OF SERVICE STUDY

Following the determination of the water utility financial plan, the next steps are to summarize the water utilities total rate revenue requirement, determine the proportion of that requirement which is attributable to each customer class, and calculate the volumetric and fixed rates.

4.1 WATER REVENUE REQUIREMENT FROM RATES

Table 27 below indicates the level of water utility expenditures which must be recovered from rates in the FY 2015 test year and each year of the forecast period. It is comprised of the forecast water utility O&M and capital expenditures, and is offset by non-rate revenues the water utility is anticipated to receive over the forecast period. The total test year revenue requirement is approximately $34 Million.

4.2 WATER REVENUE REQUIREMENTS BY CUSTOMER CLASS

Following the development of the total test year revenue requirement, the proportion of the total revenue requirement allocable to each customer class must be determined. This allocation represents the level of revenues that must be recovered from each customer class, given the operational demands that class places on the water utility system. This allocation is performed via the multi-step process described below.

4.2.1 O&M Allocation to Function Categories

The first step in determining revenue requirements by customer class is to allocate the test year O&M revenue requirement to functional categories. These categories are functions that the water utility must perform in order to deliver water service to City customers. For the water utility they are: Administrative and General, Customer Service, Source of Supply, Pumping, Treatment, Storage, Transmission Mains, Distribution Mains, Meters and Services and Hydrants.
The O&M allocations, by department, are shown in Table 28 on the following page.

TABLE 28: WATER O&M ALLOCATION TO FUNCTIONAL CATEGORIES

DEPARTMENT	Direct Allocation	Administrative and General	Customer Service	Source of Supply	Pumping	Treatment	Storage	Transmission Mains	Distribution Mains	Meters and Services	Hydrants
Total Dept 536.100-Utilities - Water Administration	$ 7,718,511	$ 7,718,511	$ -	$ -	$ -	$ -	$ -	$ -	$ -	$ -	$ -
Total Dept 536.206-Utilities - Water Cross Connection P	$ 108,204	$ -	$ -	$ -	$ -	$ -	$ -	$ -	$ 108,204	$ -	$ -

GRAND TOTAL WATER UTILITY	$ 21,182,111	$ 8,818,511	$ 1,244,890	$	$	$ 7,650,329	$	$	$ 3,806,440	$ 530,201	$

4.2.2 O&M Allocation to Cost Components

Once O&M costs have been allocated to functional categories, the total O&M revenue requirement allocated to each functional category must be further allocated based on the operational need that function is designed to fulfill. For this allocation RFC has utilized the "Base Extra Capacity" method described in the American Water Works Association ("AWWA") publication, "Manual of Water Supply Practices M1, Principles of Rates, Fees and Charges (M1)."

The cost components utilized in this study are: base demand, or water demand under average conditions; maximum day and hour demand, or water demand under peak load conditions; customer service, for functions related to customer billing and service; and fire protection, for functions pertaining to the use of public hydrants and private fire lines. Table 29 below indicates the classification of water O&M expenditures to the cost components described above.

TABLE 29: WATER O&M ALLOCATION TO COST COMPONENTS

		$ Allocation							
		Base	Max Day Extra	Max Hour Extra	Customer Units Equivalent Meters		Fire Protection Private Fire		Public Fire
FUNCTIONAL CLASSIFICATION	Total $ Allocation	Demand	Capacity	Capacity	& Services	Bills	Equivalent Connections	Bills	Hydrants
Administrative and General	$ 8,843,511	$ 2,791,751	$ 4,451,013	$ 360,453	$ ',245,291	$ -	$ -	$ -	$ -
Customer Service	$ 1,244,890	$ -	$ -	$ -	$ ',244,890	$ -	$ -	$ -	$ -
Source of Supply	$ -	$ -	$ -	$ -	$ -	$ -	$ -	$ -	$ -
Pumping	$ -	$ -	$ -	$ -	$ -	$ -	$ -	$ -	$ -
Treatment	$ 7,050,319	$ 2,717,572	$ 4,332,747	$ -	$ -	$ -	$ -	$ -	$ -
Storage	$	$	$	$	$	$	$	$	$
Transmission Mains	$ -	$ -	$ -	$ -	$ -	$ -	$ -	$ -	$ -

Meters and Services	$ 533,281	$ -	$ -	$ -	$ 533,281	$ -	$ -	$ -	$ -
Hydrants	$ -	$ -	$ -	$ -	$ -	$ -	$ -	$ -	$ -
	$ 21,483,441	$ 6,778,137	$ 10,806,686	$ 875,157	$ 3,023,462	$ -	$ -	$ -	$ -

4.2.3 Capital Cost Allocation to Functional Components

Similar to the allocation of the O&M revenue requirement described in the previous section, the capital revenue requirement must be allocated to functional categories. Table 30 on the following page indicates the functional allocation of capital costs.

The basis for the allocation of capital costs was the existing level of water utility investment in fixed assets. The existing net book value of each major asset class was allocated to the functional categories. The total capital revenue requirement, approximately 14 Million in the test year, was then allocated according to the proportion of existing investment in each functional category. As indicated, a large proportion of investment in fixed assets pertains to upgrades to the City's water treatment plant. As such, the majority of the capital revenue requirement (68%) has been allocated to the treatment function.

TABLE 30: WATER CAPITAL ALLOCATION TO FUNCTIONAL CATEGORIES

Allocation of Capital Costs to Functional Categories	Total	Administrative and General	Customer Service	Source of Supply	Pumping	Treatment	Storage	Transmission Mains	Distribution Mains	Meters and Services	Hydrants
Breakdown of Fixed Assets by Functional Category	100%	0.21%	0.00%	9.53%	0.48%	68.39%	0.00%	0.00%	18.25%	2.09%	0.04%

4.2.4 Capital Cost Allocation to Cost Components

As with the allocation of the O&M revenue requirement described above, the functionally allocated capital revenue requirement must also be allocated according to the operational need for which each function is designed to fulfill.

The "Base Extra Capacity" method described in AWWA M1 is also used to allocate the capital revenue requirement to cost components. Table 31 below summarizes this allocation.

TABLE 31: WATER CAPITAL ALLOCATION TO COST COMPONENTS

		$ Allocation								
			Max Day	Max Hour	Customer Units		Fire Protection

Distribution Mains	2,633,837	887,946	1,415,691	360,200	-	-	-	-	-
Meters and Services	239,678	-	-	-	283,678	-	-	-	-
Hydrants	5,613	5,613	-	-	-	-	-	-	-
Total Capital Expenditures	13,830,548	5,882,305	7,268,754	360,200	314,289	-	-	-	-

4.2.5 Non-Rate Revenue Allocation to Cost Components

Non-rate revenue must be excluded from the O&M and Capital revenue requirements as these amounts are an offset to the revenue requirement which will be recovered from rates. Consequently, non-rate revenues are allocated to the cost components so that they can be removed from the total revenue requirement. In this case, non-rate revenues were allocated proportionally according to the total O&M revenue requirement allocation and can be seen in Table 32 on the below.

TABLE 32: WATER NON-RATE REVENUE ALLOCATION TO COST COMPONENTS

			$ Allocation							
				Max Day	Max Hour	Customer Units		Fire Protection

4.2.6 *Determination of Maximum Day and Hour Peaking Factors*

Once each component of the revenue requirements has been determined, maximum day and hour peaking factors for each customer class are estimated. These are the basis upon which the maximum day and hour cost allocations, determined in the previous step, are allocated to each customer class. In general, the guidelines for determining maximum day and hour peaking factors outlined in AWWA M1 were the basis for this component of the analysis.

The maximum day demand for each customer class is estimated as the average usage per day in the highest usage month, divided by the annual average usage per day, weighted by the ratio of maximum day demand to the average demand in the maximum month for the entire water system. In other words:

- System Max Day to Average Day in Max Month=(System Max Day Demand)/(System Max Month/30)
- Class Maximum Day=[(Class Max Month/30)/(Class Annual Total)/365]*[System Max Day to Average Day in Max Month]

The weighting occurs because the exact maximum day, by customer class is not known, but is assumed to have the same relationship to the average day in the maximum month as the entire system. As the exact customer class maximum hour is not known, a similar weighting process occurs to determine the customer class maximum hour demands:

- System Max Hour to Average Day in Max Month=(System Max Hour)/(System Max Month/30)
- Class Maximum Hour=Class Max Day*System Max Hour to Average Day in Max Month

The determination of customer class peaking factors is shown in Table 33 on the below.

TABLE 33: WATER PEAKING FACTOR CALCULATIONS

System Production Metrics											
	Annual Total	System Annual Average Day	System Max Month	Average Day in Max Month	System Max Day	System Max to Average Day	System Max Day to Average Day in MM	System Max Hour Peak (Estimated)	System Max Hour	System Max Hour to Average Day	System Max Hour to Average Day in MM

Total System	3,485,892	426,416	14,214	9,550	1.49				

4.2.7 *Calculation of Units of Service*

The next step in the cost allocation process is to summarize the units of service, which are the basis for the allocation of the total revenue requirement to each of the customer classes. The units are Base units, Maximum Day Extra Capacity units, Maximum Hour Extra Capacity units, Customer units and Direct Fire Protection Units and are indicated in Table 34 on the following page.

Base units are the annual usage for each customer class. Maximum Day Extra Capacity units represent the water demand in excess of that which is used on an average day for that customer class, and is a function of the average daily usage and the customer class peaking factor determined in the prior step.

As an example, the residential class is forecast to use 1.7 Million CCF on an annual basis in the test year. This equates to 4,700 CCF/day on an average day. Based on the maximum day peaking factor determined in the previous step, Residential customers, on their highest usage day of the year, typically use 1.7 times their average day usage, or around 8,200 CCF. The difference between the maximum day and average day, around 3,500 CCF, represents the Maximum Day Extra Capacity units.

A similar calculation is used to determine the Maximum Hour Extra Capacity Units, which are simply the usage forecast in the highest hour of the test year, less the maximum day demand.

Customer Units are equivalent meters, and customer monthly bills. The number of bills for each customer class was ascertained via an examination of the billing data from the City's Customer Information System ("CIS"). The equivalent meters are the number of customer meters at each meter size weighted by the potential water demand each meter can place on the water system.

Private fire connections and hydrants were not included as the City does not currently bill separately for public or private fire protection.

TABLE 34: WATER UNITS OF SERVICE

4.2.8 Unit Cost of Service

Following the allocation of the water revenue requirements to each of the cost components and the calculation of the units of service, a unit cost of service for each cost component can be determined. These unit costs are basis by which the revenue requirements by customer class are determined. The unit cost of service is the revenue requirement, as allocated to the cost components, divided by the units of service attributable to that component and is shown in Table 35 below.

TABLE 35: WATER UNIT COST OF SERVICE

Water Units of Service

CUSTOMER CLASS	Base Demand Units	Max Day Extra Capacity	Max Hour Extra Capacity	Customer Units: Equivalent Meters & Services	Customer Units: Bills	Direct Fire Protection: Private Fire Equivalent Connections	Direct Fire Protection: Public Fire Hydrants
Total Inside City	3,242,360	14,302	22,112	34,689	317,092		
Total Outside City	34,379	296	285	295	1,920		
Grand Total System Units of Service	3,276,738	14,598	22,397	34,984	319,002		

Water Cash Basis Revenue Requirements

REVENUE REQUIREMENT	Total	Base Demand Units	Max Day Extra Capacity	Max Hour Extra Capacity	Customer Units: Equivalent Meters & Services	Customer Units: Bills	Direct Fire Protection: Private Fire Equivalent Connections	Direct Fire Protection: Public Fire Hydrants
Total Operation and Mainterance Expenditures	$ 21,483,441	$ 5,778,137	$ 10,806,686	$ 875,157	$ 3,023,462	$ -	$ -	$ -	$ -
Unit Cost		$ 2.07	$ 740.28	$ 36.08	$ 80.47	$ -	$ -	$ -	$ -
Total Capital Expenditures	$ 13,830,548	$ 5,882,305	$ 7,268,764	$ 380,200	$ 319,289	$ -	$ -	$ -	$ -
Unit Cost		$ 1.80	$ 497.93	$ 16.08	$ 9.13	$ -	$ -	$ -	$ -
Total Non-Rate Revenues	$ (913,314)	$ (288,156)	$ (469,479)	$ (37,205)	$ (128,535)	$ -	$ -	$ -	$ -
Unit Cost		$ (0.09)	$ (31.47)	$ (1.66)	$ (3.68)	$ -	$ -	$ -	$ -
Total System Revenue Requirements	$ 34,400,675	$ 12,372,280	$ 17,010,021	$ 1,198,152	$ 3,214,210	$ -	$ -	$ -	$ -
Total System Unit COS	$ -	$ 3.78	$ 1,206.74	$ 52.50	$ 91.93	$ -	$ -	$ -	$ -

For example, total base demand units are 3.2 Million CCF. This means that the O&M, Capital and Non-Rate Revenue Requirements cost $2.07, $1.80 and $(.09) per unit of base water demand. The total unit cost to serve base water demand is $3.78/CCF. The calculation is repeated for each cost component to determine the overall unit cost to serve base demand, extra capacity demand (max day and hour) and provide customer service.

4.2.9 Revenue Requirements by Customer Class

The customer class revenue requirements are the basis for establishing alternative rates by customer class. The City's existing rate structure does not include distinct rates by customer class. At this time the City will not be implementing any rate structure changes. However, the distinct class revenue requirements are shown in Table 36 below and are the basis for the alternative rates by customer class presented as Appendix A.

TABLE 36: WATER REVENUE REQUIREMENTS BY CUSTOMER CLASS

Water Units of Service					Customer Units		Direct Fire Protection

Check on Total System COS (Should be $0	$								

As Table 36 indicates, the revenue requirement for each customer class is the total unit cost of service determined previously, multiplied by the units of service for each customer class. The total allocation is based on each customer class's contribution to the water utility's overall operating and capital costs, as represented by their units of service.

4.3 WATER RATE DESIGN

As mentioned previously, the water rates have been calculated under the City's existing rate structure. The rate calculation under existing rates will be presented here, with the alternative rates by customer class presented as Appendix A for informational purposes.

4.3.1 Volumetric Rate Calculations

As mentioned above, the City did not indicate a desire to significantly modify its water rate structure at this time. Therefore RFC maintained various components of the existing water volumetric rates including:

- The existing inside/outside city differential (i.e. outside=150% of inside)
- The existing steepness or difference between the highest, middle and lowest block rates
- The existing structure which charges the same volumetric rates for all customer classes
- The existing shift of some volumetric costs to the fixed service charge (i.e. a readiness to serve adjustment)

The calculation of the water volumetric rates involves the following steps

- Determine total composite volumetric revenue requirement:

    - Adjust the test-year volumetric revenue requirement (i.e. Base, Max Day and Max Hour costs) by the readiness to serve amount
    - Allocate the adjusted volumetric revenue requirement to the three consumption blocks
    - Add the block allocation for inside and outside city customers to determine a composite volumetric revenue requirement for all customer classes
- Determine the composite water volumetric units:
    - Multiply the consumption, by block, for inside and outside city customers, by their respective differentials (Outside=150% of Inside).
    - Add those units together.
- Calculate Inside and Outside City Volumetric Rates:
    - Determine a composite rate, for each block, for all customer classes:
        - Multiply the composite consumption for each block by the proposed steepness for that block and sum the result
        - For the lowest block divide the total composite revenue requirement by the total determined above.
        - For Blocks 2 and 3 multiply the Block 1 rate by the proposed steepness for Blocks 2 and 3.
    - Multiply the composite rates, by block determined above, by the outside and inside city differentials to determine the block rates for inside and outside city customers.

A summary of the water volumetric rate calculations are indicated in Table 37 below.

TABLE 37: WATER VOLUMETRIC RATE CALCULATIONS

4.3.2 Fixed Charge Calculations

As noted above, the City did not express a desire to change rate structures at this time. Consequently, the following aspects of the existing rate structure have been maintained including:

- The existing inside/outside city differential (i.e. outside=150% of inside)
- The existing shift of some volumetric costs to the fixed service charge (i.e. a readiness to serve adjustment)
- The flow equivalencies for the various meter sizes

The calculation of the water fixed charges involves the following steps

- Determine total composite fixed charge revenue requirement by summing the fixed charge revenue requirements (i.e. those allocated to the customer service related cost components) and the readiness to serve revenue requirement
- Determine the composite fixed charge water units:
    - Multiply the number of inside and outside city equivalent accounts by the existing I/O differential (Outside=150% of Inside)
    - Add those units together to determine the composite number of equivalent customer accounts
- Calculate Inside and Outside City Volumetric Rates:
    - Determine an annual composite rate for all customer classes by dividing the total composite revenue requirement determined above, by the total composite water equivalent accounts
    - Determine a monthly rate for the 5/8" equivalent account by dividing the annual rate by 12.
    - Multiply the composite fixed charges by the Inside and Outside City differentials (100% for Inside City and 150% for Outside City) to determine the monthly fixed charge per 5/8" equivalent account for inside and outside city customer classes.
    - Multiply the monthly fixed charge for a 5/8" equivalent account by the meter equivalencies for each meter size to determine the monthly fixed charge for the remaining meter sizes.

The fixed charge calculations are shown in Table 38 on the following page.

TABLE 38: WATER FIXED CHARGE CALCULATIONS

CHARGE	Total Revenue Requirements By Charge	Composite Revenue Requirements	Equivalent Accounts	Test Year Differential ____ Times Inside City	Test Year Adjusted Equivalent Accounts	Test Year Composite Equivalent Accounts	Monthly Fixed Charge Per 5/8" Equivalent

4.3.3 Summary of Existing and Forecast Water Rates

Based on the calculations from the previous two sections, the existing and proposed rates for the forecast period are shown on Tables 39 and 40 on the following two pages. Note that while the test year rates have been calculated within the cost of service study, the rates for FY 2016 and beyond are based on the overall rate revenue increase from the water utility financial plan.

4.3.4 Projected Residential Water Bills

Table 41 below indicates projected water bills for Residential Inside City customers with a 5/8" meter. Also included are estimates of the bills, which residential customer may have seen, had the City continued to purchase water from DWSD. For example, had the City continued to purchase water from DWSD, a typical Flint customer using 5 CCF per month would have an estimated water bill in FY 2015 of $67.38 Given the shift to KWA, that same customer would see a bill of $62.51, a savings of $4.87 per month, or $58.44 per year.

TABLE 41: PROJECTED RESIDENTIAL WATER BILLS

5. WASTEWATER UTILITY COST OF SERVICE STUDY

Following the development of the wastewater utility financial plans the next step is to determine the level of rate revenues required to adequately recover the cost of providing wastewater service. This is typically performed for a test year, which—as mentioned previously—is the year ending June 30, 2014 (FY 2015).

5.1 WASTEWATER REVENUE REQUIREMENT FROM RATES

Table 42 below indicates the level of wastewater utility expenditures which must be recovered from rates in the FY 2015 test year. As the table indicates, the total test year revenue requirement is approximately $29 Million.

TABLE 42: WASTEWATER REVENUE REQUIREMENTS

5.2 WASTEWATER REVENUE REQUIREMENTS BY CUSTOMER CLASS

Following the development of the total test year revenue requirement, the proportion of that revenue requirement attributable to each customer class must be determined. This allocation is performed via the multi-step process described below.

5.2.1 O&M Allocation to Function Categories

The first step in determining revenue requirements by customer class is to allocate the test year O&M revenue requirement to functional categories. These categories are functions that the wastewater utility must perform in order to deliver wastewater service to City customers. For the wastewater utility they are: Administrative and General, Customer Service, Collection, Pumping, and Treatment.

The O&M allocations, by department, are shown in Table 43 below:

TABLE 43: WASTEWATER O&M ALLOCATION TO FUNCTIONAL CATEGORIES

DEPARTMENT	Total $ Allocation	Administrative and General	Customer Service	Collection System	Lift Stations and Pumping	Wastewater Treatment
Total Dept 536.101-Utilities - Sewer Administratior	$ 7,653,942	$ 7,653,942	$ -	$ -	$ -	$ -
Total Dept 540.100-Water Service Center Management	$ 839,476	$ -	$ 839,476	$ -	$ -	$ -
Total Dept 540.300-WSC - Capital improvements	$ -	$ -	$ -	$ -	$ -	$ -
Total Dept 540.207-Wsc-Meter Reading - Sewer	$ 738,419	$ -	$ 738,419	$ -	$ -	$ -
Total Dept 540.208-Wsc-Sewer Maint./Construction	$ 2,797,696	$ -	$ -	$ 2,797,696	$ -	$ -
Total Dept 550.100 Wpc Operations	$ 5,516,166	$	$	$	$	$ 5,516,166
Total Dept 550.200-Wpc-Third Ave Pump Station	$ 735,282	$ -	$ -	$ -	$ 735,282	$ -
Total Dept 550.202-Wpc-Maintenance Expense	$ 2,912,411	$ -	$ -	$ -	$ -	$ 2,912,411
Total Dept 550.300-WPC - Capital improvements	$ -	$ -	$ -	$ -	$ -	$ -
Total Dept 550.300-Non_dep_Exp-Sewer Portion	$ -	$ -	$ -	$ -	$ -	$ -
Total Dept 966.101-Transfers out to Func 101	$ 1,860,000	$ 1,860,000	$ -	$ -	$ -	$ -
GRAND TOTAL WASTEWATER UTILITY	$ 23,053,392	$ 9,513,942	$ 1,577,894	$ 2,797,696	$ 735,282	$ 8,428,578

5.2.2 O&M Allocation to Cost Components

Once O&M costs have been allocated to functional categories, the total O&M revenue requirement allocated to each functional category must be further allocated based on the operational need which they are designed to fulfill. For this allocation RFC has generally utilized the cost allocation methodology described in the Water Environment Federation's Manual of Practice No. 27, "Financing and Charges for Wastewater Systems."

The costs components utilized in this study are: volume or wastewater utility costs which are incurred on the basis of the quantity of wastewater discharged into the system; strength measures such as Biochemical Oxygen Demand ("BOD"), Total Suspended Solids ("TSS") and Phosphorus; and customer measures such as equivalent meters and monthly bills. A summary of the allocation of the wastewater O&M revenue requirement is included in Table 44 on the following page.

TABLE 44: WASTEWATER O&M ALLOCATION TO COST COMPONENTS

FUNCTIONAL CLASSIFICATION	Total $ Allocation	Volume Allocation	Strength			Customer	
			Allocation To BOD	Allocation to TSS	Allocation to Phosphorous	Customer Meters	Customer Bills
Administrative and General	$ 9,510,942	$ 2,402,564	$ 1,974,206	$ 1,974,206	$ 1,974,206	$ 1,100,760	$ -
Customer Service	$ 1,577,894	$ -	$ -	$ -	$ -	$ 1,577,894	$ -
Collection System	$ 2,797,696	$ 2,797,696	$ -	$ -	$ -	$ -	$ -
Lift Stations and Pumping	$ 735,282	$ 735,282	$ -	$ -	$ -	$ -	$ -
Wastewater Treatment	$ 8,428,578	$ -	$ 2,809,526	$ 2,809,526	$ 2,809,526	$ -	$ -
	$ 23,050,392	$ 6,015,542	$ 4,783,732	$ 4,783,732	$ 4,783,732	$ 2,678,654	$ -

5.2.3 Capital Cost Allocation to Functional Components

Similar to the allocation of the O&M revenue requirement described in the previous section, the capital revenue requirement must be allocated to functional categories. Table 45 below indicates the allocation of capital costs.

TABLE 45: WASTEWATER CAPITAL ALLOCATION TO FUNCTIONAL CATEGORIES

Allocation of Capital Costs to Functional Categories						
	Total	Administrative and General	Customer Service	Collection System	Lift Stations and	Wastewater Treatment
Breakdown of Fixed Assets by Function	100%	0.32%	0.00%	82.79%	4.31%	12.58%
Total Capital Expenditures	$ 7,230,845	$ 22,823.92	$ -	$ 5,986,709	$ 311,745	$ 909,567

$ Allocation of Water Fixed Assets to Functional Categories						
FIXED ASSET CATEGORY	Net Book Value	Administrative and General	Customer Service	Collection System	Lift Stations and	Wastewater Treatment
01Land	$ 38,077	$ 120	$ -	$ 31,526	$ 1,642	$ 4,790

% Breakdown	100.00%	0.32%	0.00%	82.79%	4.31%	12.58%

As the table above indicates, the basis for the allocation of capital costs was the existing level of wastewater utility investment in fixed assets. The existing net book value of each major asset class was allocated to the functional categories. The total capital revenue requirement, approximately 7 Million in the test year, was then allocated according to the proportion of existing investment in each functional category. For example, a large proportion of investment in wastewater fixed assets relates to the rehabilitation of the City's collection system ("Sewer SSR"). As such, the majority of the capital revenue requirement (82%) has been allocated to the collection system function.

5.2.4 Capital Cost Allocation to Cost Components

As with the allocation of the O&M revenue requirement described above, the functionally allocated capital revenue requirement must also be further allocated according to the operational need that each function is designed to fulfill.

Table 46 below summarizes this allocation.

TABLE 46: WASTEWATER CAPITAL ALLOCATION TO COST COMPONENTS

			Strength			Customer	
FUNCTIONAL CLASSIFICATION	Total $ Allocation	Volume Allocation	Allocation To BOD	Allocation to TSS	Allocation to Phosphorous	Customer Meters	Customer Bills
Administrative and General	22,824	19,944	960	960	960	-	-
Customer Service	-	-	-	-	-	-	-
Collection System	5,986,709	5,986,709	-	-	-	-	-
Lift Stations and Pumping	311,745	311,745	-	-	-	-	-
Wastewater Treatment	909,567	-	303,189	303,189	303,189	-	-
Total Capital Expenditures	7,230,845	6,318,397	304,149	304,149	304,149	-	-

5.2.5 Non-Rate Revenue Allocation to Cost Components

Non-rate revenue must be excluded from the O&M and Capital revenue requirements as these amounts are an offset to the revenue requirement which will be recovered from rates. Consequently, non-rate revenues are allocated to the cost components so that they can be removed from the total revenue requirement. In this case, non-rate revenues were allocated proportionally according to the total O&M revenue requirement allocation and can be seen in Table 47 below.

TABLE 47: WASTEWATER NON-RATE REVENUE ALLOCATION TO COST COMPONENTS

			Strength			Customer

5.2.6 Plant Balance Analysis

Once each component of the revenue requirements has been determined, wastewater strength units, by customer class must be estimated. These are the basis upon which the strength costs, determined in the previous step, are allocated to each customer class.

This allocation is performed via a proportional distribution of each measure of strength to each customer class, based on the contribution of that class to overall billed wastewater volumes. This calculation is shown in Table 48 below.

TABLE 48: WASTEWATER PLANT BALANCE ANALYSIS CALCULATIONS

CUSTOMER CLASS		Test Year Volume (CCF)	Biochemical Oxygen Demand mg/L	Biochemical Oxygen Demand Pounds	Total Suspended Solids mg/L	Total Suspended Solids Pounds	Phosphorous mg/L	Phosphorous Pounds	Test Year Combined Pounds
Treatment Plant Volumes		3,663,013	84.5	1,935,331.27	78.5	1,797,911.30	4.225	96,766.56	3,830,009
Less:									
Total Inside City Residentia		1,575,663	100	989,080	93	916,437	2	17,177	1,922,694
Total Inside City Commercial/Industrial		1,393,721	100	877,451	93	813,007	2	15,238	1,705,696
Total Outside City Residential		208	100	129	93	120	2	2	25
Total Outside City Commercial/Industrial		7,012	100	4,399	93	4,076	2	76	8,550
Total System Billed Volumes		2,982,604	100	1,871,059	93	1,733,639	2	32,494	3,637,192
Total Infiltration and Inflow		685,412	15	64,272.49	15	64,272.49	15	64,272.49	192,817
Balance		-		(U)		(U)		-	-
Gallons per CCF	748								
Milligrams per Pound	453,592								
Liters per Gallon	3.78541								
% Infiltration and Inflow		23%							

As an example, consider Biochemical Oxygen Demand. The proportion of BOD contributed to the wastewater system by each class, is function of the overall volume contributed by that class. Therefore the BOD units are allocated to each customer class based on their proportion of total billed volumes. Inside City Residential customers, for example, are forecasted to contribute 1.5 Million CCF in billed wastewater volumes in the test year, or 53% of total billed volumes. Consequently, they are assigned 53% of total forecast BOD. The same calculations are performed for the remaining strength units, TSS and Phosphorous.

The result is a total level of strength units for each customer class, which is then used to determine unit costs by customer class and allocate the test year revenue requirement.

5.2.7 Calculation of Units of Service

The next step in the cost allocation process is to summarize the units of service, which are used as the basis for the allocation of the total revenue requirement to each of the customer classes. The units pertain to each of the cost components mentioned above (i.e. strength, volume and customer units). In the following step, the units will be used to determine a unit cost for each cost component.

The wastewater units of service are shown in Table 49 below.

TABLE 49: WASTEWATER UNITS OF SERVICE

WASTEWATER UNITS OF SERVICE		Residential		Commercial/Industrial	
	Total System (CCF)	Total Inside City Residential	Total Outside City Residential	Total Inside City Commercial/Industrial	Total Outside City Commercial/Industrial
Volume Units					
% Breakdown		52.9%	0.0%	46.9%	0.2%
Tota System Billed Volumes	2,982,604	',576,636	206	1 398,721	7,012
Tota Infiltration and Inflow	686,412	362,852	47	32',900	1,614
Tota Volume	3,669,016	',939,517	253	1 720,620	8,625
Strength Units					
EOC	1,871,059	989,030	129	877,451	4,399
TSS	1,733,639	916,437	120	813,007	4,076
Phosporous	32,494	17,177	2	15,238	76
Tota Wastewater Strength (Pounds)	3,637,192	',922,634	251	1 705,696	8,550
Customer Units					
Meters	33,177	25,436	6	7,699	35
Bills	315,952	301,096	71	14,646	137

As mentioned above the units determined for each customer class are volume (the total forecast wastewater contribution) strength (the proportion of wastewater strength units determined in the plant balance analysis) and customer (equivalent meters and customer bills as in the water cost of service study).

5.2.8 Unit Cost of Service

Following the allocation of the wastewater revenue requirements to each of the cost components and the calculation of the units of service, a unit cost of service for each cost component can be determined. These unit costs are the basis by which the revenue requirements by customer class are determined.

The unit cost of service is the total revenue requirement, as allocated to the cost components, divided by the units of service attributable to each component and is shown in Table 50 on the following page.

TABLE 50: WASTEWATER UNIT COST OF SERVICE

Wastewater Units of Service		Strength			Customer	
CUSTOMER CLASS	Volume Allocation	Allocation To BOD	Allocation to TSS	Allocation to Phosphorous	Customer Meters	Customer Bills
Total Inside City Residential	',939,517	989,080	915,437	17,177	25,436	301,096
Total Outside City Residential	253	129	120	2	6	7
Total Inside City Commercial/Industrial	',720,620	877,451	813,007	15,238	7,639	14,646
Total Outside City Commercial/Industrial	3,625	4,399	4,076	76	35	137
Grand Total System Units of Service	3,669,016	1,871,059	',733,639	32,494	33,177	315,952

Wastewater 'Cash Basis' Revenue Requirements			Strength			Customer	
REVENUE REQUIREMENT	Total	Volume Allocation	Allocation To BOD	Allocation to TSS	Allocation to Phosphorous	Customer Meters	Customer Bills
Total Operation and Maintenance Expenditures	$ 23,053,392	$ 6,015,542	$ 4,783,732	$ 4,783,732	$ 4,783,732	$2,686,654	$ -
Unit Cost		$ 1.64	$ 2.56	$ 2.76	$ 147.22	$ 80.98	$ -
Total Capital Expenditures	$ 7,230,845	$ 6,313,397	$ 304,149	$ 304,149	$ 304,149	$ -	$ -
Unit Cost		$ 1.72	$ 0.16	$ 0.18	$ 9.36	$ -	$ -
Total Non-Rate Revenues	$ (423,562)	$ (110,524)	$ (87,392)	$ (87,892)	$ (87,892)	$ (49,352)	$
Unit Cost		$ (0.03)	$ (0.05)	$ (0.05)	$ (2.70)	$ (1.49)	$ -
Total System Revenue Requirements	$ 29,860,674	$ 12,223,415	$ 4,999,989	$ 4,999,989	$ 4,999,989	$2,637,292	$ -
Total System Unit COS	$ -	$ 3.33	$ 2.67	$ 2.88	$ 153.87	$ 79.49	$ -

For example, the total volume units are 3.6 Million CCF. This means that the O&M, Capital and Non-Rate Revenue Requirements cost $1.64, $1.72 and $(.03) per unit of wastewater volume. The total unit cost associated with wastewater volume is $3.33/CCF. The calculation is repeated for each cost component to determine the overall unit cost associated with wastewater volume, strength (BOD, TSS and Phosphorous) and customer service.

5.2.9 Revenue Requirements by Customer Class

The customer class revenue requirements are the basis for establishing alternative rates by customer class. The City's existing wastewater rate structure does not include distinct rates by customer class. At this time the City does not wish to make major rate structure changes. However, the revenue requirements by customer class are shown in Table 51 on the following page and are the basis for the alternative wastewater rates presented as appendix B to this report.

TABLE 51: WASTEWATER REVENUE REQUIREMENTS BY CUSTOMER CLASS

Wastewater Units of Service			Strength			Customer	
CUSTOMER CLASS		Volume Allocation	Allocation To BOD	Allocation to TSS	Allocation to Phosphorous	Customer Meters	Customer Bills
Total System Revenue Requirements	$ 29,860,674	$ 12,223,415	$ 4,999,989	$ 4,999,989	$ 4,999,989	$2 637,292	$ -

Check on Total System COS (Should be $0)	$ -						

The revenue requirement for each customer class is the total unit cost of service determined previously, multiplied by the units of service for each customer class. The result is a total allocation to each customer class made up of each of the cost components discussed previously. The allocation is based on each customer class's contribution to the wastewater utility's overall operating and capital costs, as represented by their units of service.

5.3 WASTEWATER RATE DESIGN

The wastewater rates have been calculated under the existing rate structure and under a new structure which recognizes the customer classes present in the City's CIS. The rate calculation under existing rates will be presented here, with the alternative rates by customer class presented as an appendix B.

5.3.1 Volumetric Rate Calculations

As mentioned above, the City did not indicate a desire to significantly modify the existing wastewater rate structure. Therefore RFC maintained various components of the existing water volumetric rates including:

- The existing inside/outside city differential (i.e. outside=110% of inside)
- The existing structure which charges the same volumetric rates for all customer classes
- The existing shift of some volumetric costs to the fixed service charge (i.e. a readiness to serve adjustment)

The calculation of the wastewater volumetric rates involves the following steps

- Determine total composite volumetric revenue requirement:
    - Adjust the test-year revenue requirement allocated to the volume cost component by the readiness to serve amount
    - Add the wastewater strength related cost components (BOD, TSS and Phosphorous)
    - Remove Beecher Metro Revenue
    - Add the inside and outside city revenue requirements to determine a composite revenue requirement for all customer classes
- Determine the composite wastewater units:
    - Multiply the units of inside and outside city customers by the existing I/O differential (Outside=110% of Inside)
    - Add those units together.
- Calculate Inside and Outside City Volumetric Rates:
    - Determine a composite rate for all customer classes by dividing the total composite revenue requirement determined above, by the total composite wastewater units
    - Multiply the composite rates by the Inside and Outside City differentials (100% for Inside City and 110% for Outside City) to determine the rates for each customer class.

The above calculations are summarized in Table 52 on the following page.

TABLE 52 WASTEWATER VOLUMETRIC RATE CALCULATIONS

5.3.2 Fixed Charge Calculations

As noted above, the City did not express a desire to change rate structures at this time. Consequently, the following aspects of the existing rate structure have been maintained including:

- The existing inside/outside city differential (i.e. outside=120% of inside)
- The existing shift of some volumetric costs to the fixed service charge (i.e. a readiness to serve adjustment)
- The flow equivalencies for the various meter sizes

The calculation of the wastewater fixed charges involves the following steps:

- Determine total composite fixed charge revenue requirement by summing the fixed charge revenue requirements (i.e. those allocated to the customer service related cost components) and the readiness to serve revenue requirement.
- Determine the composite fixed charge wastewater units:
    - Multiply the number of inside and outside city equivalent accounts by the existing I/O differential (Outside=120% of Inside)
    - Add those units together to determine the composite number of equivalent customer accounts
- Calculate Inside and Outside City Volumetric Rates by:
    - Determine an annual composite rate for all customer classes by dividing the total composite revenue requirement determined above, by the total composite wastewater equivalent accounts
    - Determine a monthly rate for the 5/8" equivalent account by dividing the annual rate by 12.
    - Multiply the composite fixed charges by the Inside and Outside City differentials (100% for Inside City and 110% for Outside City) to determine the monthly fixed charge per 5/8" equivalent account for inside and outside city customer classes.
    - Multiply the monthly fixed charge for a 5/8" equivalent account by the meter equivalencies for each meter size to determine the monthly fixed charge for the remaining meter sizes.

The calculations described in the narrative above are summarized in Table 53 on the following page.

TABLE 53: WASTEWATER FIXED CHARGE CALCULATIONS

CUSTOMER CLASS	Readiness to Serve Adjustment: Fixed Charge Revenue Requirement	Readiness to Serve Adjustment: Adjustment	Readiness to Serve Revenue Req.	Base Fixed: RR Allocated on Customer Services	Base Fixed: RR Allocated on Customer Bills

5.3.3 Summary of Existing and Forecast Wastewater Rates

Based on the calculations from the previous two sections, the existing and proposed rates for the forecast period are shown in Tables 54 and 55 on the following page.

Note that while the test year FY 2015 rates have been calculated within the cost of service study, the rates for FY 2016 and beyond are based on the overall rate revenue increase from the wastewater utility financial plan.

6. DISCUSSION OF BEST MANAGEMENT PRACTICES (BMP)

We reviewed the City's water and wastewater utility performance in relation to Best Management Practices that have been published by Fitch Ratings ("Fitch"). These criteria are used by Fitch when reviewing the performance of a utility as part of the bond rating process.

6.1 FINANCIAL PROFILE

"Long term integrated financial forecasting that considers future demand, expected rate increases, regulations, and infrastructure renovation and renewal needs."

In general, the City's practices are consistent with this BMP. This report includes ten year comprehensive financial plans for both the water and wastewater utilities. These were developed in collaboration with City staff and reflect the rate revenue increases necessary to adequately fund operation and maintenance expenditures, make necessary capital improvements and ensure fiscal sustainability for each utility on a going forward basis. In addition to these general objectives, the water utility financial plans reflect the transition from DWSD to the KWA, which is expected to lower the level of future rate increases and afford the City greater control over the water utility's operating costs.

"Policies ensure appropriate financial margins, including debt service coverage and operating liquidity levels."

In general the City is taking steps to improve consistency with this BMP. The aforementioned water and wastewater utility financial plans move the City towards an operating reserve target of 90 days of O&M and debt service. These reserves are critical to mitigate the risk inherent in operating a seasonal enterprise. That said, it is also importance to recognize the sensitivity of ratepayers to further increases, especially given the relatively high level of existing rates. Consequently, the City has decided to work up to the 90 day target over the next few fiscal years to mitigate the potential rate impact.

Coverage of existing water utility debt service is quite strong. This stems primarily from the fact that, given the City's past financial difficulties, it has limited access to capital markets for the purpose of funding its capital improvements. At this time, all major capital improvements are forecast to be made out of current rate revenues. If this policy is maintained throughout the forecast period, water utility debt service coverage will likely continue to improve. In the future the City may choose to leverage its water revenues via the Michigan Drinking Water Revolving Revenue Fund, which would spread the rate impact of the forecast capital improvements. Currently, the City does not have any outstanding wastewater debt.

"Regular financial reporting and monitoring systems enable policymaker's access to timely information on fiscal performance relative to the budget."

It is our understanding that the City's reporting systems are consistent with this BMP.

"Limited exposure to growth sensitive revenues, such as tap, connection, or impact fees."

The City's practices are consistent with this BMP. The City currently receives little to no revenue from growth related fees, mostly due to the fact that customer account growth has largely been negative or flat in recent years. Consequently the City is not overly reliant on such fees. However, if customer account growth becomes positive in the future, the City should consider implementing growth related fees to ensure that new customers are adequately compensating existing customers for their investment in the water and wastewater systems.
"Collection policies that regularly track the rate of timely payment receipts and enforce penalties against late payers or terminate service for non-payment."

The City has taken steps to improve consistency with this BMP. In recent years, account delinquency and non-payment has become a significant problem for the City. In addition, City staff has cited issues regarding potential water theft. Given these challenges, the City has engaged a consulting firm to aid in the analysis of their customer information system data, in an effort to recover the lost revenue associated with these issues. This is a critical in that it ensures paying customers are not bearing the burden of water theft going forward.

"Willingness of political leaders to adjust rates when necessary."

The City's practices are consistent with this BMP. Emergency Manager Darnell Early has the authority to raise rates as necessary to ensure the ongoing financial sustainability of the water and wastewater utilities. It is our understanding however, that input from political stakeholders will continue to be part of that City's rate adjustment process going forward.

"Limited exposure to financial operations of the general government, so that system revenues can be relied upon for use to operate and improve the utility. For transfers to the general fund policies that specifically limit their scope and growth are favorable."

The City is taking steps to improve consistency with this BMP. It is our understanding that approximately $10 million is due from the City's general fund to the water and wastewater utilities. A potential course of action would be to reduce the amount of administrative fees the water and wastewater utilities pay each year to the general fund, until the amount owed is paid back in full. Regardless of the method, the City has indicated that, as a worst case scenario, the general fund would repay the amount owed to the water and wastewater utilities by FY 2019.

"Compliance with industry accounting practices and establishment of appropriate internal controls."

It is our understanding that the City's accounting practices adhere to the generally accepted accounting practices ("GAAP") set forth by the Governmental Accounting Standards Board ("GASB").

"Rate affordability guidelines that consider absolute levels of rates and their affordability relative to income levels."

The City is working to improve consistency with this BMP. Affordability is a critical consideration for the City especially given the relatively high level of existing rates. As mentioned above, a key component of this study involved analyzing the impact of transitioning from DWSD to the KWA, a policy which should generate savings to ratepayers in lieu of what would have happened had the City continued to purchase water from DWSD.

6.2 DEBT PROFILE RELATED

"Prioritized capital improvement plans that cover at least five years and consider capacity, supply, regulatory and replacement and renewal needs."

The City's practices are consistent with this BMP. The City has provided five year capital improvements plans for the water and wastewater utilities as well as guidance for forecasting beyond that period, both of which have been incorporates into the water and wastewater financial plans. Based on our experience with utility operations and an examination of the provided plans, it is our opinion that the City is working to address capacity, supply and regulatory issues.

"Debt issuance policies including types, terms, and suitability under specific conditions, as well as the amount of variable-rate debt deemed appropriate."

Currently the City's wastewater utility has no debt and the level of water utility relatively modest. Though the debt associated with the joining KWA will increase this amount in the coming years, it will not reach unsustainable levels.

"Development of comprehensive policies on the use of hedge agreements and their disclosure prior to entering into any such agreements."

The water and wastewater utilities are not currently party to any such agreements and there are no plans to utilize such agreements in the future.

6.3 OPERATING PROFILE RELATED

"Key management industry experience and active participation in organizations that keep pace with sector issues, regulatory mandates and technological advances."

The City's practices are consistent with BMP in this regard.

"Use of professional engineers, either within the utility or outside of it, to prepare objective reviews of system performance and needs on regular basis and provide periodic revisions to construction cost estimates."

The City's practices are consistent with BMP in this regard.

"Regular consultation with regional and local growth planners, community development officials, and demographers to predict and, if possible, limit infrastructure needs related to population and business growth."

The City has been very active in such activities in recent years, as evidenced by their participation in the KWA effort to secure a more economical source of water to better meet the City's needs in the future.

1. EXECUTIVE SUMMARY

1.1 BACKGROUND OF THE STUDY

On November of 2013, the City of Flint ("City") engaged Raftelis Financial Consultants ("RFC") to perform water and wastewater utility rate studies. The scope of services included the following:

- Evaluate the adequacy of existing water and wastewater revenues to meet each utility's projected revenue requirements
- Develop comprehensive water and wastewater financial plans based on sound financial management practices for a 10 year forecast period
- Determine water and wastewater rates which adequately recover the cost of operating the water and wastewater utilities under the existing rate structures and provide alternatives based on a comprehensive cost of service study
- Analyze the impact of transitioning from the use of purchased potable water from the Detroit Water and Sewerage District ("DWSD") to the treatment of raw water from the Karegnondi Water Authority ("KWA").
- Review the City's water and wastewater operations in comparison to Best Management Practices criteria.

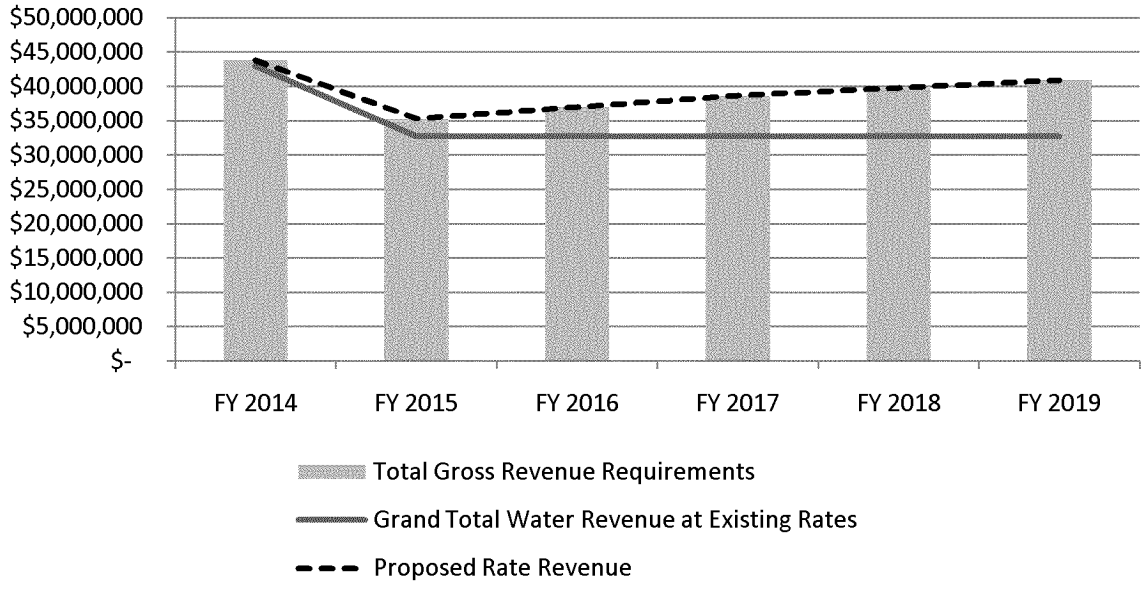
1.2 ADEQUACY OF EXISTING WATER AND WASTEWATER REVENUES

Charts ES-1 and 2 below summarize our conclusions with respect to the adequacy of water and wastewater revenue at existing rates. As the charts indicate, beginning in FY 2015, water and wastewater utility revenues are insufficient to recover each utility's revenue requirement. Key drivers of this disparity are:

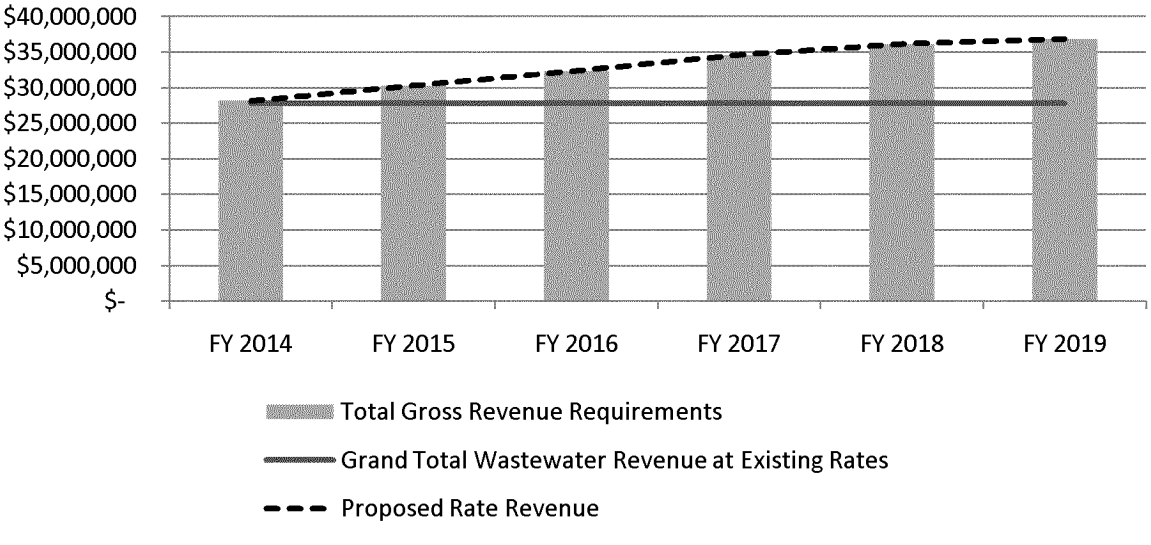
- A marked decrease in billed usage, the cause of which is currently being evaluated by RFC under a separate contract.
- A normal pattern of declining per customer usage for both utilities overall due to conservation, efficient appliances, etc.
- Increases in utility revenue requirements associated with the financial plans including operating cost inflation, capital improvements and policies which support the sound financial management of each utility in accordance with best management practices.

Consequently, the proposed increases in rate revenue are necessary to ensure each utility can adequately fund its operation and maintenance expenditures, make payments on existing debt service, provide funding for needed capital improvements and ensure adequate operating reserves.

ES-1: Water Utility Revenues at Existing Rates



ES-2: Wastewater Utility Revenues at Existing Rates



1.3 WATER AND WASTEWATER FINANCIAL PLANS

Tables ES-3 and ES-4 below summarize the proposed water and wastewater financial plans and rate revenue increases for the first 5 years of the forecast period.

The financial plans and proposed increased in rate revenues are driven by the following factors:

- Inflationary increases in O&M expenditures for both utilities
- For the water utility:
    - Decreases in revenues associated with the cessation of service to Genesee County
    - Decreases in O&M expenditures associated with an elimination of DWSD water purchases
    - Increases in O&M expenditures associated with transitioning from back-up to primary operation of the Flint WTP
    - Increases in capital expenditures associated with improvements to the Flint WTP in preparation for the treatment of raw water from KWA
    - Increases in debt service associated with Flint's share of projected KWA debt service
- Necessary cash funded recapitalization of wastewater utility assets
- A build-up, for each utility, of operating reserves equivalent to 90 days of projected O&M expenditures and debt service payments, the minimum, according to financial management practices ("BMP").

ES-3: SUMMARY OF WATER AND WASTEWATER FINANCIAL PLANS

Water Utility	Budget Year FY 2014	Test Year FY 2015	Forecast FY 2016	Forecast FY 2017	Forecast FY 2018	Forecast FY 2019

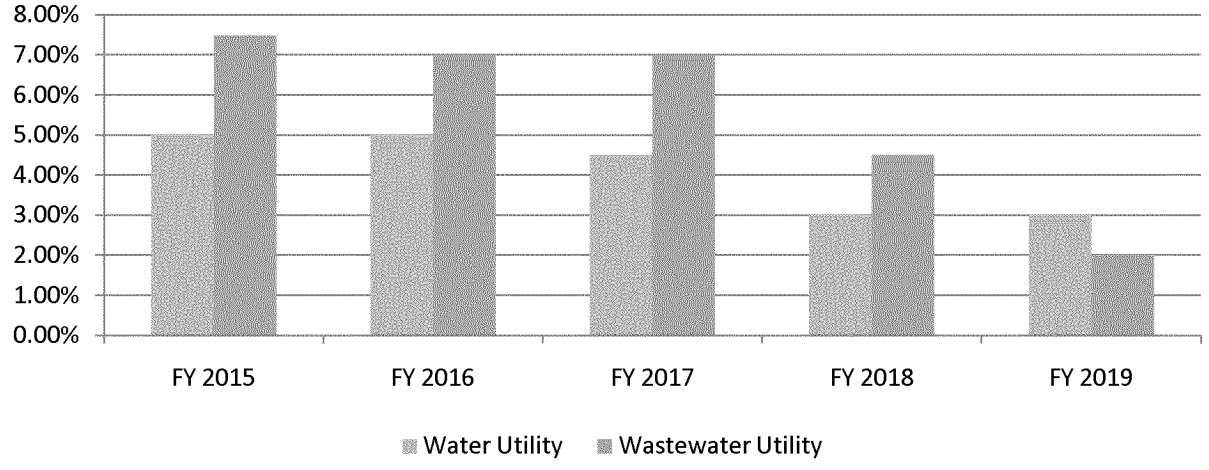
ES-4: Annual % Rate Revenue Increases



As indicated in the previous section, water and wastewater utility revenues at existing rates are not adequate to recover the projected costs each utility will incur over the forecast period. Consequently additional rate revenue will be needed to ensure adequate recovery of each utility's revenue requirements.

1.4 COST OF SERVICE STUDY AND WATER AND WASTEWATER RATES

Table ES-5 below summarizes the results of the water and wastewater cost of service studies. The customer classes included are those which are recognized in the City's existing customer information system ("CIS"). While the City does not currently have either a water or wastewater rate structure which recognizes these customer classes, rates by customer class have been calculated and are included as appendices A and B to this report. The totals for each customer class represent the contribution of that class to the overall costs of each utility. This is based on the allocation processes described in sections 4 and 5 of this report.

Given the transition from KWA to DWSD the City will not be making any rate structure changes at this time. It is our opinion that the current water and wastewater rate structures are reasonable. The declining block water rates generally recognizing the fact that higher volume customers (i.e. large commercial and industrial) contribute less to peak demand, and overall water utility costs. Additionally, the relatively high proportion of fixed charge revenue recovery provides a less climatically variable revenue stream, which given that the majority of the utility's costs are fixed, is entirely appropriate.

ES-5: SUMMARY OF COST OF SERVICE STUDY RESULTS

CUSTOMER CLASS	WATER	WASTEWATER
Allocated Cost of Service		
Total Inside City Residential COS	$ 18,345,672	$ 16,412,799
Total Inside City Commercial/Industrial COS	$ 15,263,704	$ 13,378,697
Total Inside City Lawn COS	$ 370,646	N/A
Total Inside City COS	$ 33,980,022	$ 29,791,496
Total Outside City Residential COS	$ 99,483	$ 2,382
Total Outside City Commercial/Industrial COS	$ 321,169	$ 66,796
Total Outside City Lawn COS	$ -	N/A
Total Outside City COS	$ 420,653	$ 69,178
Total System Cost of Service	$ 34,400,675	$ 29,860,674

Tables ES-6 and ES-7 summarize the projected fixed and volumetric rates for the first 5 years of the forecast period, given financial plans and rate revenue increases proposed above. For every dollar of rate revenue generated by each utility approximately $.66 is derived from volumetric charges and $.34 is derived from fixed charges.

It is typical for water and wastewater utilities to design fixed charges which recover, at a minimum, the costs of meter reading, billing and collection and customer service. Additionally, fixed charges may also relate to fixed investment in utility assets associated with providing service which is available at all times regardless of usage levels by City customers. These costs, known as readiness to serve costs, have also been incorporated into the water and wastewater fixed charges.

Volumetric rates recover the variable costs associated with operating the water and wastewater utilities. For the water utility variable costs are associated with water treatment, transmission and distribution, pumping, and storage and are driven primarily by the design requirements associated with peak water usage. For the wastewater utility variable costs are associated with wastewater treatment, collection, and pumping, and are driven by the wastewater volume and strength.

ES-6: SUMMARY OF WATER AND WASTEWATER VOLUMETRIC RATES

1.5 TRANSITION FROM DWSD TO KWA

A key aspect of this study involved analyzing the impact of the anticipated April 1, 2014 transition from the Detroit Water and Sewerage District ("DWSD") to the Karegnondi Water Authority ("KWA"). The expectation is that the transition will strengthen the water utility's financial position going forward, by affording the City greater control over its operating and capital costs. As part of this engagement the City asked RFC to estimate the potential savings to a typical Flint customer as a result of transitioning from DWSD to the KWA.

A summary of the potential savings, based on an alternative water financial planning scenario is summarized in Table ES-8 below. For example, a City customer using 5 CCF per month would see a combined monthly bill of approximately $122.83 under the KWA. This is based on a 5% water rate increase over existing rates. That same customer, should the City continue receiving service from DWSD, is estimated to have a bill of approximately $127.70. This represents estimated 13% water rate increase over existing rates. Consequently, the savings to the typical City is approximately $4.87 per month, or $58.44 per year. Finally, note that the cumulative water rate increase over the next 5 years is estimated to be 18% under the KWA and 41% under DWSD.

ES-8: POTENTIAL RESIDENTIAL BILL SAVINGS (KWA VS. DWSD)

1.6 WATER AND WASTEWATER UTILITY OPERATIONS AND BEST MANAGEMENT PRACTICES

We reviewed the City's water and wastewater utility performance in relation to Best Management Practices ("BMP") that have been published by Fitch Ratings ("Fitch"). These criteria are used by Fitch when reviewing the performance of a utility as part of the bond rating process. Table ES-9 below summarizes our assessment of the City's water and wastewater utility operations with respect to BMP. The City's operations generally comport with BMP. The City is working to improve consistency in four areas: first, as mentioned above, the financial plans build-up to the minimum recommended 90 operating reserve and should achieve this reserve, all else equal, in the next 5 years. Second, the City is working with RFC, under a separate contract, to identify sources of lost water and wastewater revenue to improve the City's revenue collections, and reduce the cost of utility service theft to paying customers. Third, the City is currently determining arrangements whereby the general fund can repay its obligations to the water and wastewater utilities, ensuring the water and wastewater funds are not subsidizing general government operations going forward. Finally, the transition to KWA will allow the City greater control over its operating and capital costs, and as mentioned above, should result in more affordable rates than the alternative.

2. INTRODUCTION AND STUDY OBJECTIVES

2.1 INTRODUCTION

In November of 2013, the City of Flint ("City") engaged Raftelis Financial Consultants ("RFC") to perform water and wastewater utility rate studies. The need for engagement was precipitated by the City's transition from the use of purchased water from the Detroit Water and Sewerage District ("DWSD") to participation in the Karegnondi Water Authority ("KWA") on April 1, 2014. Following the transition, the City will treat raw water from the KWA at its existing water treatment plant, which is currently undergoing the improvements necessary to become the primary source of treated water for the City of Flint. The expectation is that the transition will strengthen the water utility's financial position going forward, affording the City greater control over its operating and capital costs as a result.

From a financial perspective, the following are a few notable aspects of the transition:

- Water Operation and Maintenance ("O&M") expenditures are projected to decrease significantly as the cost of purchasing water from DWSD ceases as of FY 2015,
- Water Capital costs are projected to increase as the City begins paying its share of the Karegnondi Water Authority's debt service and incurs the cost of the necessary water treatment plant improvements.
- Water utility revenues will decrease as the City's wholesale customer, Genesee County ("County"), will no longer be receiving water service from the City as a result of the transition
- Projected water increases under the KWA are projected to be lower than they would have been, had the City continued to purchase water from DWSD
- City of Flint residential customer water bills are projected to be lower under the KWA than if the City had continued to purchase water from DWSD (see Table 1 below).

TABLE 1: ESTIMATED RATE INCREASES (KWA VS. DWSD)

CUMULATIVE % RATE REVENUE INCREASE	FY 2014	FY 2015	FY 2016	FY 2017	FY 2018	FY 2019

2.2 RATE STUDY OBJECTIVES

The objectives of this study are as follows:

- Evaluate the adequacy of existing water and wastewater revenues to meet the projected revenue requirements
- Develop comprehensive water and wastewater financial plans based on sound financial management practices for a 10 year forecast period
- Determine water and wastewater rates which adequately recover the cost of operating the water and wastewater utilities under the existing rate structures and provide alternatives based on a comprehensive cost of service study
- Evaluate the City's current financial position and adjust the comprehensive financial plans for both the mid-year transition to the KWA and going forward.

3. WATER AND WASTEWATER UTILITY FINANCIAL PLANS

3.1 THE FINANCIAL PLANNING PROCESS

The general objective of the financial planning process is to arrive at the level of water and wastewater rate revenue required to ensure the financial sustainability of each utility on a going forward basis. This revenue requirement is then distributed to each customer class as part of the cost of service study.

For this study financial plans were developed for the current fiscal year, the test year and a ten-year forecast period. The current year is typically the year in which the study occurs, in this case fiscal year 2014 ("FY 2014"), or the year ending July 30, 2014. For the current year the financial plans represent an estimate, for each utility, of year-end financial position.

This serves as the basis for the test year financial plan. For this study, the test year is the following fiscal year, FY 2015. While the current year serves as an estimate of each utility's current financial position, the test year represents a projection of utility revenues, expenditures and operating reserve levels. The ten-year forecast period allows the City to evaluate trends over time and evaluate the impact of challenges that occur beyond the test year. For the purposes of this study separate financial plans were developed for each utility to ensure that each would be self-sustaining.

The following steps are necessary to arrive at the test year revenue requirement for each utility:

- Forecast customer units of service and revenue at existing water and wastewater rates
- Forecast operation and maintenance expenditures ("O&M") for each utility
- Forecast capital expenditures, including the payment of existing water and wastewater debt service and the financing of planned capital improvements
- Develop detailed cash flow forecasts summarizing planned O&M and capital expenditures, recommended rate revenue increases and operating reserve levels

3.2 WATER UTILITY FINANCIAL PLAN

3.2.1 Forecast Water Units of Service and Revenue at Existing Rates

Water Utility Rates

The City recovers the cost of operating the water utility via volumetric rates (rates based on the amount of water used) and fixed monthly service charges (a charge per customer bill). The City's existing water volumetric charge is a declining block rate, or a rate that decreases on a per unit basis as the amount of water consumed increases. The existing water volumetric rate structure is shown in Table 2 below:

TABLE 2: EXISTING WATER VOLUMETRIC RATES

CUSTOMER CLASS	CONSUMPTION BLOCK	UNITS	FY 2014 Existing Block Rates
Total Inside City All Classes			
Inside City Block 1	0-35 CCF	($/CCF)	$ 7.52
Inside City Block 2	36-2000 CCF	($/CCF)	$ 7.31
Inside City Block 3	above 2000 CCF	($/CCF)	$ 5.79
Total Outside City All Classes			
Outside City Block 1	0-35 CCF	($/CCF)	$ 11.26
Outside City Block 2	36-2000 CCF	($/CCF)	$ 10.77
Outside City Block 3	above 2000 CCF	($/CCF)	$ 8.68

A distinction is made between customers residing within in the City of Flint, and those who receive City water service, but do not reside within the City. As Table 2 indicates, outside city volumetric rates are approximately 150% of inside city volumetric rates. This is a common policy for municipal water utilities and recognizes inside city customers as "owners" of the utility, who should be compensated for the risk of investing in and maintaining their utility system.

In addition to the volumetric rates, the existing water rate structure includes a fixed service charge which varies by customer water meter size. The rates are charged per customer bill and are shown in Table 3 on the following page.

TABLE 3: EXISTING WATER FIXED CHARGES

CUSTOMER CLASS	FY 2014 Proposed Fixed Charge
Inside City Residential Customers	
5/8"	$ 21.78
3/4"	$ 41.86
1"	$ 55.20
1-1/2"	$ 55.28
2"	$ 55.28
Inside City Commercial/Industrial Customers	
5/8"	$ 53.39
3/4"	$ 81.26
1"	$ 75.10
1-1/2"	$ 107.76
2"	$ 150.62
3"	$ 297.45
4"	$ 523.50
6"	$ 1,029.43
8"	$ 1,492.88
10"	$ 2,060.75
12"	$ 2,493.12
16"	$ 3,102.64
20"	$ 3,351.10
Outside City Residential Customers	
5/8"	$ 32.48
3/4"	$ 62.71
1"	$ 82.79
1-1/2"	$ 82.79
2"	$ 82.79
Outside City Commercial/Industrial Customers	
5/8"	$ 80.13
3/4"	$ 91.72
1"	$ 112.67
1-1/2"	$ 161.79
2"	$ 226.09
3"	$ 448.47
4"	$ 785.37
6"	$ 1,543.87
8"	$ 2,239.47
10"	$ 3,107.48
12"	$ 3,739.51
16"	$ 4,653.87
20"	$ 5,463.82

Most Flint residential customers have a 5/8" meter and currently pay the $21.78 fixed monthly service charge. For the monthly fixed charge the same distinction is made between inside and outside city customers, with the outside city charge set at approximately 150% of the inside city

charge. Additionally, the current fixed charge structure further distinguishes between residential commercial customers.

In addition to the retail rates discussed above, the City currently serves a wholesale water customer, Genesee County. Genesee County pays a commodity charge of $346,863, a fixed monthly service charge of $114,000 and a volumetric rate of $1.30 per CCF. As mentioned above, as of April 1, 2014, the County will no longer be a customer of the City.

Forecast Water Units of Service

In order to forecast the level of revenue under existing water rates, the number of water accounts at each meter size and the level of water consumption in each consumption block must be estimated for the forecast period.

The number of accounts at each meter size was determined by dividing the number of annual bills at each meter size by the 12 monthly billing periods. The number of historical and forecast water utility customer accounts, by meter size, is indicated in Tables 4 and 5 on the following two pages. Note that the historical data appear to indicate a 14% increase in inside city accounts and a 27% increase in outside city accounts from FY 2012 to FY 2013. This increase in accounts does not appear to have been sustained into FY 2014. The City has indicated that water and wastewater billings have decreased approximately 12% from FY 2013 to FY 2014 year to date. Given this change and for the sake of developing a conservative estimate we have adjusted the forecast level of water accounts to 13% below their FY 2013 level. As no significant growth in the City's customer base is expected, no growth in water utility accounts has been projected over the forecast period.

In addition to forecasting the number of accounts by meter size, the level of water consumption in each consumption block must be estimated for the forecast period. The historical and forecast level of water consumption by customer class and block is indicated in Tables 6 and 7 on the following two pages.

Note that—consistent with the significant increase in inside city water accounts in FY 2013—inside city water consumption has increased significantly in FY 2013 (18%). Given the uncertainty surrounding the increase in billed consumption in FY 2013, and the subsequent decrease in billed revenues in FY 2014, we have forecast retail consumption at 6% below FY 2013 levels for FY 2014, FY 2015 and the remainder of the ten year forecast period.

As noted above, the City anticipates discontinuing DWSD water service as of April 1, 2014. At that point Genesee County will no longer be a wholesale customer of the City. Therefore the forecast of the County's consumption has been adjusted to account for the final 3 months of FY 2014 (i.e. April, May and June) during which the City will not be providing water service to the County.

Forecast Water Revenue at Existing Rates

Water utility revenue at existing rates is the sum of the volumetric and fixed charge revenue. Fixed charge revenue at existing rates was determined by multiplying the number of forecast accounts at each meter size, by the existing rate for that size and again by 12, for each of the monthly bills. Volumetric revenue was determined by multiplying the level of consumption in each consumption block, by the existing rate for that block. Table 8 on the following page summarizes the level of water revenue at existing water rates.

The total level of water revenue at existing rates in FY 2014 is forecast to be approximately $43 Million. Of this, around 70% is derived from the volumetric rates and 30% is associated with the fixed monthly service charges. In FY 2015, the level of revenue at existing rates is forecast to decline to approximately $32 Million. This change can be attributed to the loss of Flint's existing wholesale customer Genesee County, which will occur as a result of the City's discontinuing DWSD water service. On a going forward basis, the level of revenues at existing water rates would remain at 32 Million assuming consumption and account growth remain flat and the City makes no adjustments to water rates.

3.2.2 Forecast of Water Operation and Maintenance Expenditures

Water O&M Inflation Rates

The budgets provided by the City are the basis for the forecast of water utility O&M expenditures. Given that the transition from DWSD to KWA involves significant shifts in budgetary expenditures on a relatively detailed level, the City provided uninflated estimates of budgeted O&M expenditures for FY 2014 through FY 2017. To forecast the level of water utility O&M expenditures that the City would incur over the forecast period we applied the escalation rates shown in Table 9 below.

TABLE 9: WATER O&M ESCALATION RATES

The rates shown above were developed based on discussions with City staff, and our experience with similar utilities.

Forecast Water Utility Operation and Maintenance Expenditures

Tables 10 and 11 on the following page indicate the estimated level of water utility O&M expenditures over the forecast period, both by the escalation rate categories and by department.
In FY 2014, the largest O&M expenditures related to the "Water Plant-Operations" department within which the bulk water purchases from DWSD were included. Note that this amount decreases significantly in FY 2015 and going forward as the City transitions from DWSD to KWA. Excluding purchased water, the most notable expenditures are associated with personnel: Wages and Salaries, Benefits, Pension, and the City's share of retiree healthcare benefits ("Cost Alloc. Plan-Expense"). In general, water O&M expenditures are projected to decrease from around $36 Million currently to $21 Million in FY 2015 with inflationary increases thereafter.

3.2.3 Water Utility CIP and CIP Financing

Tables 12 and 13 on the following two pages indicate the water capital improvements program ("CIP") provided by the City and the CIP financing plan.

As the plan we received from the City was presented in current year dollars, we escalated the project amounts 3% per year from FY 2015 onward. The largest capital improvements in dollar terms are associated with the rehabilitation of the City's water treatment plant (i.e. Water Plant-Phase II projects). These projects are in large part associated with transitioning the City's water treatment plant from back-up status to the primary source of treated water for the City. As discussed above, the improvements to the water treatment plant will allow the City to treat raw water purchased from the KWA for distribution to City customers. In general, the level of spending in the CIP decreases from $10 Million to $7.5 Million as the plant improvements are completed and increases again in the out years due to planned annual recapitalization.

There are three items of note in Table 13. First, all projects are projected to be cash financed at this time. The City may seek to leverage its revenue stream in the future via use of the State of Michigan's ("State") Drinking Water Revolving Revenue Fund ("DWRRF") loan program. This would be particularly beneficial for major water capital improvements, as it would spread the financing responsibility over existing and future ratepayers who receive the benefit of the improvement throughout the asset's useful life. Second, note that the proceeds from the recently completed sale of the Flint pipeline to Genesee County have been included to offset the costs of the treatment plant improvements. Finally, note that the "uses" category includes a line for additional uses, which represent the KWA initiation payments required of the City until it begins paying its share of KWA debt service in FY 2017.

3.2.4 Water Cash Flow Forecast

The final step in the development of the water utility financial plan involves the preparation of a comprehensive cash flow forecast. A summary of the water cash flow forecast is presented in Table 14 on the following page. The key components of the forecast are Financial Plan Inputs, Revenues, Expenditures, and Operating Performance.

- The Financial Plan Inputs component indicates the forecast rate revenue increases. These increases were determined in consultation with City staff and are designed to:
- Ensure recovery of O&M expenditures and existing water utility debt service
- Provide cash financing for the capital projects outlined in the CIP including those necessary to transition from DWSD to the KWA
- Minimize the risk associated with operating a climate dependent enterprise via the build-up of operating reserves equivalent to 90 days of O&M and Debt Service

The Revenues component indicates the revenue at existing rates discussed previously, non-rate revenue and the additional revenue generated by the rate revenue increases shown in the inputs section. Given the forecast of water demand, O&M and capital expenditures and the 90 Day operating reserve benchmark, the "additional revenue" line represents the amount of revenue needed—above existing rate revenues –-to ensure adequate recovery of the water utility's revenue requirement in each year of the forecast.

The Expenditures component indicates the major sources of expenditures for the City's water utility: O&M expenditures, Capital expenditures (Rate Revenue Financing and Debt Service) and Transfers to the Operating Reserve.

The Operating performance component indicates the year end position of the water utility with respect to a few key factors. Included are the estimated operating reserve balance, the target reserve balance (90 Days of O&M and Debt Service), the construction fund ending balance and the water utility's debt service coverage ratio.

3.3 WASTEWATER UTILITY FINANCIAL PLAN

3.3.1 Forecast Wastewater Units of Service and Revenues at Existing Rates

Wastewater Utility Rates

The City recovers the cost of operating the wastewater utility via volumetric rates (i.e. rates based on the amount of wastewater discharged) and fixed monthly service charges (a charge per customer bill). The City's existing wastewater volumetric charge is a uniform rate, or a rate that does not vary (on a per unit basis) as the amount of wastewater discharged varies. The existing wastewater volumetric rate structure is indicated in Table 15 below. Similar to the water utility volumetric rate structure a distinction is made between inside and outside city customers, with the outside city rate set at approximately 110% of the inside city rate.

TABLE 15: EXISTING WASTEWATER VOLUMETRIC RATES

CUSTOMER CLASS		Test-Year FY 2014 Existing Rates
Total Inside City All Classes	($/CCF)	$ 4.80
Total Outside City All Classes	($/CCF)	$ 5.29

The existing wastewater rate structure includes a fixed service charge which varies by customer water meter size. The rates are shown in Table 16 on the following page. Most Flint residential customers have a 5/8" meter and currently pay the $32.00 fixed monthly service charge. Similar to the wastewater volumetric rate, the wastewater fixed charges include an inside outside city differential (120%).

In addition to the retail wastewater rates, the City currently serves a wholesale wastewater customer, Beecher Metropolitan District ("District"). The District currently pays $1.34 per CCF of wastewater discharged, an amount that was negotiated in the 1995 Contract between the City and the District.

TABLE 16: EXISTING WASTEWATER FIXED CHARGES

Forecast Wastewater Units of Service

In order to forecast the level of revenue expected under existing wastewater fixed and volumetric rates, the number of wastewater accounts and the level of wastewater usage must be estimated for

the forecast period. The number of historical and forecast wastewater utility accounts is indicated in Tables 17 and 18 on the following two pages.

Note that the raw billing data appear to indicate a 14% increase in inside city accounts and an 18% increase in outside city accounts from FY 2012 to FY 2013. This increase in accounts does not appear to have been sustained into FY 2014. The City has indicated that wastewater billings have decreased approximately 12% from FY 2013. Given this change we have adjusted the forecast level of wastewater accounts to be around 13% less than their FY 2013 level. As no significant growth the City's customer base is expected, no customer growth has been forecast on a going forward basis.

In addition to forecasting the number of accounts by meter size and customer class, the level of wastewater usage must also be estimated for the forecast period. The historical and forecast level of wastewater usage by customer class can be on Table 19 on the following page.

Note that—consistent with the significant increase in inside city water accounts in FY 2013—inside city wastewater usage has increased significantly in FY 2013 (18%). Given the uncertainty surrounding this most recent upswing in billed wastewater usage, and the subsequent decrease in billed wastewater revenues, retail usage has been forecast at 15% below FY 2013 levels for FY 2014, FY 2015 and the remainder of the ten year forecast period.

Forecast Wastewater Revenue at Existing Rates

Wastewater utility revenue at existing rates is the sum of wastewater volumetric and fixed charge revenue. Fixed charge revenue at existing rates was determined by multiplying the number of forecast accounts at each meter size, by the existing rate for that size and again by 12 for each of the monthly bills. Volumetric revenue was determined by multiplying the level of consumption by customer class, by the existing volumetric rates. Table 20 on the following page indicates the level of wastewater revenue at existing rates.

Total wastewater revenue at existing rates in FY 2014 is forecast to be approximately $27 Million. Of this, approximately 54% is derived from the volumetric rates and 46% is associated with the fixed monthly service charges. On a going forward basis, the level of revenues at existing wastewater rates would remain at $27 Million assuming consumption remains flat and the City makes no adjustments to wastewater rates.

3.3.2 Forecast Wastewater Utility Operation and Maintenance Expenditures

Wastewater O&M Inflation Rates

The budgets provided by the City are the basis for the forecast of wastewater utility O&M expenditures. To forecast the level of wastewater utility O&M expenditures that the City is projected to incur over the forecast period we applied escalation rates shown in Table 21 below.

Forecast Wastewater Operation and Maintenance Expenditures

Tables 22 and 23 on the following page indicate level of wastewater O&M expenditures over the forecast period, by the escalation rate categories and by department.

Unlike the water utility there is no single large cost driver. The most notable expenditures are associated with personnel: Wages and Salaries, Benefits, Pension, and the City's share of retiree healthcare benefits ("Cost Alloc. Plan-Expense"). In general, wastewater O&M expenditures are projected to decrease from 24 Million in FY 2014 to 23 Million in FY 2015 with inflationary increases thereafter.

3.3.3 Wastewater Utility CIP and CIP Financing

Tables 24 and 25 on the following two pages indicate the wastewater capital improvements program ("CIP") provided by the City and the CIP financing plan. As the plan we received from the City was presented in current year dollars, we escalated the project amounts 3% per year from FY 2015 onward. The largest capital projects relate to rehabilitation of the City's wastewater treatment plant and pumping stations. In general, the level of spending in the CIP peaks at from $12 Million in FY 2018 and returns to an average level of around $8 Million going forward.

Table 25 summarizes the wastewater utility CIP financing plan. While the CIP financing plan used for this report only incorporates cash financing, the City may seek to leverage its revenue stream in the future via the issuance of revenue bonds or other alternative financing instruments. This would be particularly beneficial for major wastewater capital improvements, as it would spread the financing responsibility over existing and future ratepayers who receive the benefit of the improvement throughout the asset's useful life.

TABLE 24: WASTEWATER CAPITAL IMPROVEMENTS PROGRAM

3.3.4 Wastewater Cash Flow Forecast

The final step in the development of the wastewater utility financial plan involves the preparation of a comprehensive cash flow forecast. A summary of the wastewater cash flow forecast is presented in Table 26 on the following page. The key components of the forecast are Financial Plan Inputs, Revenues, Expenditures, and Operating Performance.

The Financial Plan Inputs component indicates the forecast rate revenue increases. These increases were determined in consultation with City staff and are designed to:

- Ensure recovery of wastewater utility O&M expenditures
- Provide cash financing for the wastewater capital projects outlined in the CIP
- Minimize risk via the build-up of operating reserves equivalent to 90 days of O&M and Debt Service

The Revenues component indicates the revenue at existing rates discussed previously, non-rate revenue and the additional revenue generated by the rate revenue increases shown in the inputs section. Given the forecast of wastewater demand, O&M and capital expenditures and the 90 Day operating benchmark, the "additional revenue" line represents the amount of revenue needed—above existing rate revenues—to ensure adequate recovery of the wastewater utility's revenue requirement going forward.

The Expenditures component indicates the major sources of expenditures for the City's wastewater utility: O&M expenditures, Capital expenditures (Rate Revenue Financing and Debt Service) and Transfers to the Operating Reserve.

The Operating performance section indicates the year end position of the wastewater utility with respect to a few key factors. Included are the estimated operating reserve balance, the target reserve balance (90 Days of O&M and Debt Service), and the construction fund ending balance.

TABLE 26: WASTEWATER CASH FLOW FORECAST

4. WATER UTILITY COST OF SERVICE STUDY

Following the determination of the water utility financial plan, the next steps are to summarize the water utilities total rate revenue requirement, determine the proportion of that requirement which is attributable to each customer class, and calculate the volumetric and fixed rates.

4.1 WATER REVENUE REQUIREMENT FROM RATES

Table 27 below indicates the level of water utility expenditures which must be recovered from rates in the FY 2015 test year and each year of the forecast period. It is comprised of the forecast water utility O&M and capital expenditures, and is offset by non-rate revenues the water utility is anticipated to receive over the forecast period. The total test year revenue requirement is approximately $34 Million.

4.2 WATER REVENUE REQUIREMENTS BY CUSTOMER CLASS

Following the development of the total test year revenue requirement, the proportion of the total revenue requirement allocable to each customer class must be determined. This allocation represents the level of revenues that must be recovered from each customer class, given the operational demands that class places on the water utility system. This allocation is performed via the multi-step process described below.

4.2.1 O&M Allocation to Function Categories

The first step in determining revenue requirements by customer class is to allocate the test year O&M revenue requirement to functional categories. These categories are functions that the water utility must perform in order to deliver water service to City customers. For the water utility they are: Administrative and General, Customer Service, Source of Supply, Pumping, Treatment, Storage, Transmission Mains, Distribution Mains, Meters and Services and Hydrants.
The O&M allocations, by department, are shown in Table 28 on the following page.

TABLE 28: WATER O&M ALLOCATION TO FUNCTIONAL CATEGORIES

DEPARTMENT	Total $ Allocation	Administrative and General	Customer Service	Source of Supply	Pumping	Treatment	Storage	Transmission Mains	Distribution Mains	Meters and Services	Hydrants
Total Dept 536.100-Utilities - Water Administration	$ 7,718,511	$ 7,718,511	$ -	$ -	$ -	$ -	$ -	$ -	$ -	$ -	$ -

GRAND TOTAL WATER UTILITY	$ 21,483,411	$ 8,818,511	$ 1,244,890	$	$	$ 7,660,319	$	$	$ 3,808,440	$ 533,201	$

4.2.2 O&M Allocation to Cost Components

Once O&M costs have been allocated to functional categories, the total O&M revenue requirement allocated to each functional category must be further allocated based on the operational need that function is designed to fulfill. For this allocation RFC has utilized the "Base Extra Capacity" method described in the American Water Works Association ("AWWA") publication, "Manual of Water Supply Practices M1, Principles of Rates, Fees and Charges (M1)."

The cost components utilized in this study are: base demand, or water demand under average conditions; maximum day and hour demand, or water demand under peak load conditions; customer service, for functions related to customer billing and service; and fire protection, for functions pertaining to the use of public hydrants and private fire lines. Table 29 below indicates the classification of water O&M expenditures to the cost components described above.

TABLE 29: WATER O&M ALLOCATION TO COST COMPONENTS

		$ Allocation						
			Max Day	Max Hour	Customer Units		Fire Protection		
		Base	Extra	Extra	Equivalent Meters		Private Fire		Public Fire
FUNCTIONAL CLASSIFICATION	Total $ Allocation	Demand	Capacity	Capacity	& Services	Bills	Equivalent Connections	Bills	Hydrants
Administrative and General	$ 8,843,511	$ 2,791,751	$ 4,451,013	$ 360,455	$ 1,245,291	$ -	$ -	$ -	$ -
Customer Service	$ 1,244,890	$ -	$ -	$ -	$ 1,244,890	$ -	$ -	$ -	$ -
Source of Supply	$ -	$ -	$ -	$ -	$ -	$ -	$ -	$ -	$ -
Pumping	$ -	$ -	$ -	$ -	$ -	$ -	$ -	$ -	$ -
Treatment	$ 7,050,319	$ 2,717,572	$ 4,332,747	$ -	$ -	$ -	$ -	$ -	$ -
Storage	$	$	$	$	$	$	$	$	$
Transmission Mains	$ -	$ -	$ -	$ -	$ -	$ -	$ -	$ -	$ -
Distribution Mains	$ 3,803,440	$ 1,268,813	$ 2,022,926	$ 514,701	$ -	$ -	$ -	$ -	$ -
Meters and Services	$ 533,281	$ -	$ -	$ -	$ 533,281	$ -	$ -	$ -	$ -
Hydrants	$ -	$ -	$ -	$ -	$ -	$ -	$ -	$ -	$ -
	$ 21,483,441	$ 6,778,137	$ 10,806,686	$ 875,157	$ 3,023,462	$ -	$ -	$ -	$ -

4.2.3 Capital Cost Allocation to Functional Components

Similar to the allocation of the O&M revenue requirement described in the previous section, the capital revenue requirement must be allocated to functional categories. Table 30 on the following page indicates the functional allocation of capital costs.

The basis for the allocation of capital costs was the existing level of water utility investment in fixed assets. The existing net book value of each major asset class was allocated to the functional categories. The total capital revenue requirement, approximately 14 Million in the test year, was then allocated according to the proportion of existing investment in each functional category. As indicated, a large proportion of investment in fixed assets pertains to upgrades to the City's water treatment plant. As such, the majority of the capital revenue requirement (68%) has been allocated to the treatment function.

TABLE 30: WATER CAPITAL ALLOCATION TO FUNCTIONAL CATEGORIES

Allocation of Capital Costs to Functional Categories	Total	Administrative and General	Customer Service	Source of Supply	Pumping	Treatment	Storage	Transmission Mains	Distribution Mains	Meters and Services	Hydrants

4.2.4 Capital Cost Allocation to Cost Components

As with the allocation of the O&M revenue requirement described above, the functionally allocated capital revenue requirement must also be allocated according to the operational need for which each function is designed to fulfill.

The "Base Extra Capacity" method described in AWWA M1 is also used to allocate the capital revenue requirement to cost components. Table 31 below summarizes this allocation.

TABLE 31: WATER CAPITAL ALLOCATION TO COST COMPONENTS

		$ Allocation								
			Max Day	Max Hour	Customer Units		Fire Protection		
FUNCTIONAL CLASSIFICATION	Total $ Allocation	Base Demand	Extra Capacity	Extra Capacity	Equivalent Meters & Services	Bills	Private Fire Equivalent Connections	Bills	Public Fire Hydrants

Transmission Mains	-	-	-	-	-	-	-	-	-
Distribution Mains	2,633,837	887,946	1,445,691	360,200	-	-	-	-	-
Meters and Services	239,678	-	-	-	289,678	-	-	-	-
Hydrants	5,613	5,613	-	-	-	-	-	-	-
Total Capital Expenditures	13,830,548	5,882,305	7,298,754	360,200	319,289	-	-	-	-

4.2.5 Non-Rate Revenue Allocation to Cost Components

Non-rate revenue must be excluded from the O&M and Capital revenue requirements as these amounts are an offset to the revenue requirement which will be recovered from rates. Consequently, non-rate revenues are allocated to the cost components so that they can be removed from the total revenue requirement. In this case, non-rate revenues were allocated proportionally according to the total O&M revenue requirement allocation and can be seen in Table 32 on the below.

TABLE 32: WATER NON-RATE REVENUE ALLOCATION TO COST COMPONENTS

			$ Allocation							
				Max Day	Max Hour	Customer Units		Fire Protection

4.2.6 *Determination of Maximum Day and Hour Peaking Factors*

Once each component of the revenue requirements has been determined, maximum day and hour peaking factors for each customer class are estimated. These are the basis upon which the maximum day and hour cost allocations, determined in the previous step, are allocated to each customer class. In general, the guidelines for determining maximum day and hour peaking factors outlined in AWWA M1 were the basis for this component of the analysis.

The maximum day demand for each customer class is estimated as the average usage per day in the highest usage month, divided by the annual average usage per day, weighted by the ratio of maximum day demand to the average demand in the maximum month for the entire water system. In other words:

- System Max Day to Average Day in Max Month=(System Max Day Demand)/(System Max Month/30)
- Class Maximum Day=[(Class Max Month/30)/(Class Annual Total)/365]*[System Max Day to Average Day in Max Month]

The weighting occurs because the exact maximum day, by customer class is not known, but is assumed to have the same relationship to the average day in the maximum month as the entire system. As the exact customer class maximum hour is not known, a similar weighting process occurs to determine the customer class maximum hour demands:

- System Max Hour to Average Day in Max Month=(System Max Hour)/(System Max Month/30)
- Class Maximum Hour=Class Max Day*System Max Hour to Average Day in Max Month

The determination of customer class peaking factors is shown in Table 33 on the below.

TABLE 33: WATER PEAKING FACTOR CALCULATIONS

System Production Metrics

	Annual Total	System Annual Average Day	System Max Month	Average Day in Max Month	System Max Day	System Max to Average Day	System Max Day to Average Day in MM	System Max Hour Peak (Estimated)	System Max Hour	System Max Hour to Average Day	System Max Hour to Average Day in MM

Total System	3,485,892	426,416	14,214	9,550	1.49				

4.2.7 *Calculation of Units of Service*

The next step in the cost allocation process is to summarize the units of service, which are the basis for the allocation of the total revenue requirement to each of the customer classes. The units are Base units, Maximum Day Extra Capacity units, Maximum Hour Extra Capacity units, Customer units and Direct Fire Protection Units and are indicated in Table 34 on the following page.

Base units are the annual usage for each customer class. Maximum Day Extra Capacity units represent the water demand in excess of that which is used on an average day for that customer class, and is a function of the average daily usage and the customer class peaking factor determined in the prior step.

As an example, the residential class is forecast to use 1.7 Million CCF on an annual basis in the test year. This equates to 4,700 CCF/day on an average day. Based on the maximum day peaking factor determined in the previous step, Residential customers, on their highest usage day of the year, typically use 1.7 times their average day usage, or around 8,200 CCF. The difference between the maximum day and average day, around 3,500 CCF, represents the Maximum Day Extra Capacity units.

A similar calculation is used to determine the Maximum Hour Extra Capacity Units, which are simply the usage forecast in the highest hour of the test year, less the maximum day demand.

Customer Units are equivalent meters, and customer monthly bills. The number of bills for each customer class was ascertained via an examination of the billing data from the City's Customer Information System ("CIS"). The equivalent meters are the number of customer meters at each meter size weighted by the potential water demand each meter can place on the water system.

Private fire connections and hydrants were not included as the City does not currently bill separately for public or private fire protection.

TABLE 34: WATER UNITS OF SERVICE

Water Units of Service	Base Units		Maximum Day Extra Capacity Units			Maximum Hour Extra Capacity Units			Customer Units		Direct Fire Protection

Grand Total System Units of Service	3,276,739	8,977		23,575	14,598	30	45,972	22,397	34,564	319,002			

4.2.8 Unit Cost of Service

Following the allocation of the water revenue requirements to each of the cost components and the calculation of the units of service, a unit cost of service for each cost component can be determined. These unit costs are basis by which the revenue requirements by customer class are determined. The unit cost of service is the revenue requirement, as allocated to the cost components, divided by the units of service attributable to that component and is shown in Table 35 below.

TABLE 35: WATER UNIT COST OF SERVICE

Water Units of Service								
			Max Day	Max Hour	Customer Units		Direct Fire Protection	
CUSTOMER CLASS	Base Demand Units	Extra Capacity	Extra Capacity	Equivalent Meters & Services	Bills		Private Fire Ecuivalent Connections	Public Fire Hydrants
Total Inside City	3,242,360	14,992	22,112	34,689	317,082			
Total Outside City	34,378	206	285	295	1,920			
Grand Total System Units of Service	3,276,738	14,598	22,397	34,984	319,002			

Water Cash Basis Revenue Requirements													
				Max Day	Max Hour	Customer Units		Direct Fire Protection					
REVENUE REQUIREMENT	Total	Base Demand Units	Extra Capacity	Extra Capacity	Equivalent Meters & Services	Bills		Private Fire Ecuivalent Connections		Public Fire Hydrants			
Total Operation and Mainterance Expenditures	$ 21,483,441	$ 8,778,137	$ 10,806,686	$ 875,157	$ 3,023,462	$ -		$ -		$ -		$ -	
Unit Cost		$ 2.07	$ 740.28	$ 36.08	$ 80.47	$ -		$ -		$ -		$ -	
Total Capital Expenditures	$ 13,830,548	$ 5,882,305	$ 7,298,754	$ 360,200	$ 319,289	$ -		$ -		$ -		$ -	
Unit Cost		$ 1.80	$ 497.93	$ 16.08	$ 9.13	$ -		$ -		$ -		$ -	
Total Non-Rate Revenues	$ (913,314)	$ (288,155)	$ (459,419)	$ (37,205)	$ (128,535)	$ -		$ -		$ -		$ -	
Unit Cost		$ (0.09)	$ (31.47)	$ (1.66)	$ (3.68)	$ -		$ -		$ -		$ -	
Total System Revenue Requirements	$ 34,400,675	$ 12,372,280	$ 17,010,021	$ 1,198,152	$ 3,214,210	$ -		$ -		$ -		$ -	
Total System Unit COS	$ -	$ 3.78	$ 1,206.74	$ 53.50	$ 91.93	$ -		$ -		$ -		$ -	

For example, total base demand units are 3.2 Million CCF. This means that the O&M, Capital and Non-Rate Revenue Requirements cost $2.07, $1.80 and $(.09) per unit of base water demand. The total unit cost to serve base water demand is $3.78/CCF. The calculation is repeated for each cost component to determine the overall unit cost to serve base demand, extra capacity demand (max day and hour) and provide customer service.

4.2.9 Revenue Requirements by Customer Class

The customer class revenue requirements are the basis for establishing alternative rates by customer class. The City's existing rate structure does not include distinct rates by customer class. At this time the City will not be implementing any rate structure changes. However, the distinct class revenue requirements are shown in Table 36 below and are the basis for the alternative rates by customer class presented as Appendix A.

TABLE 36: WATER REVENUE REQUIREMENTS BY CUSTOMER CLASS

Water Units of Service

Check on Total System COS (Should be $0)	$								

As Table 36 indicates, the revenue requirement for each customer class is the total unit cost of service determined previously, multiplied by the units of service for each customer class. The total allocation is based on each customer class's contribution to the water utility's overall operating and capital costs, as represented by their units of service.

4.3 WATER RATE DESIGN

As mentioned previously, the water rates have been calculated under the City's existing rate structure. The rate calculation under existing rates will be presented here, with the alternative rates by customer class presented as Appendix A for informational purposes.

4.3.1 Volumetric Rate Calculations

As mentioned above, the City did not indicate a desire to significantly modify its water rate structure at this time. Therefore RFC maintained various components of the existing water volumetric rates including:

- The existing inside/outside city differential (i.e. outside=150% of inside)
- The existing steepness or difference between the highest, middle and lowest block rates
- The existing structure which charges the same volumetric rates for all customer classes
- The existing shift of some volumetric costs to the fixed service charge (i.e. a readiness to serve adjustment)

The calculation of the water volumetric rates involves the following steps

- Determine total composite volumetric revenue requirement:

    - Adjust the test-year volumetric revenue requirement (i.e. Base, Max Day and Max Hour costs) by the readiness to serve amount
    - Allocate the adjusted volumetric revenue requirement to the three consumption blocks
    - Add the block allocation for inside and outside city customers to determine a composite volumetric revenue requirement for all customer classes
- Determine the composite water volumetric units:
    - Multiply the consumption, by block, for inside and outside city customers, by their respective differentials (Outside=150% of Inside).
    - Add those units together.
- Calculate Inside and Outside City Volumetric Rates:
    - Determine a composite rate, for each block, for all customer classes:
        - Multiply the composite consumption for each block by the proposed steepness for that block and sum the result
        - For the lowest block divide the total composite revenue requirement by the total determined above.
        - For Blocks 2 and 3 multiply the Block 1 rate by the proposed steepness for Blocks 2 and 3.
    - Multiply the composite rates, by block determined above, by the outside and inside city differentials to determine the block rates for inside and outside city customers.

A summary of the water volumetric rate calculations are indicated in Table 37 below.

4.3.2 Fixed Charge Calculations

As noted above, the City did not express a desire to change rate structures at this time. Consequently, the following aspects of the existing rate structure have been maintained including:

- The existing inside/outside city differential (i.e. outside=150% of inside)
- The existing shift of some volumetric costs to the fixed service charge (i.e. a readiness to serve adjustment)
- The flow equivalencies for the various meter sizes

The calculation of the water fixed charges involves the following steps

- Determine total composite fixed charge revenue requirement by summing the fixed charge revenue requirements (i.e. those allocated to the customer service related cost components) and the readiness to serve revenue requirement
- Determine the composite fixed charge water units:
    - Multiply the number of inside and outside city equivalent accounts by the existing I/O differential (Outside=150% of Inside)
    - Add those units together to determine the composite number of equivalent customer accounts
- Calculate Inside and Outside City Volumetric Rates:
    - Determine an annual composite rate for all customer classes by dividing the total composite revenue requirement determined above, by the total composite water equivalent accounts
    - Determine a monthly rate for the 5/8" equivalent account by dividing the annual rate by 12.
    - Multiply the composite fixed charges by the Inside and Outside City differentials (100% for Inside City and 150% for Outside City) to determine the monthly fixed charge per 5/8" equivalent account for inside and outside city customer classes.
    - Multiply the monthly fixed charge for a 5/8" equivalent account by the meter equivalencies for each meter size to determine the monthly fixed charge for the remaining meter sizes.

The fixed charge calculations are shown in Table 38 on the following page.

TABLE 38: WATER FIXED CHARGE CALCULATIONS

CHARGE	Total Revenue Requirements By Charge	Composite Revenue Requirements	Equivalent Accounts	Test Year Differential ____ Times Inside City	Test Year Adjusted Equivalent Accounts	Test Year Composte Equivalent Accounts	Monthly Fixed Charge Per 5/8" Equivalent
Total Inside City Residential	$ 7,059,524	$ 7,094,959	25,621	1.00	25,621	25,814	$ 22.90

4.3.3 Summary of Existing and Forecast Water Rates

Based on the calculations from the previous two sections, the existing and proposed rates for the forecast period are shown on Tables 39 and 40 on the following two pages. Note that while the test year rates have been calculated within the cost of service study, the rates for FY 2016 and beyond are based on the overall rate revenue increase from the water utility financial plan.

4.3.4 Projected Residential Water Bills

Table 41 below indicates projected water bills for Residential Inside City customers with a 5/8" meter. Also included are estimates of the bills, which residential customer may have seen, had the City continued to purchase water from DWSD. For example, had the City continued to purchase water from DWSD, a typical Flint customer using 5 CCF per month would have an estimated water bill in FY 2015 of $67.38 Given the shift to KWA, that same customer would see a bill of $62.51, a savings of $4.87 per month, or $58.44 per year.

TABLE 41: PROJECTED RESIDENTIAL WATER BILLS

5. WASTEWATER UTILITY COST OF SERVICE STUDY

Following the development of the wastewater utility financial plans the next step is to determine the level of rate revenues required to adequately recover the cost of providing wastewater service. This is typically performed for a test year, which—as mentioned previously—is the year ending June 30, 2014 (FY 2015).

5.1 WASTEWATER REVENUE REQUIREMENT FROM RATES

Table 42 below indicates the level of wastewater utility expenditures which must be recovered from rates in the FY 2015 test year. As the table indicates, the total test year revenue requirement is approximately $29 Million.

TABLE 42: WASTEWATER REVENUE REQUIREMENTS

5.2 WASTEWATER REVENUE REQUIREMENTS BY CUSTOMER CLASS

Following the development of the total test year revenue requirement, the proportion of that revenue requirement attributable to each customer class must be determined. This allocation is performed via the multi-step process described below.

5.2.1 O&M Allocation to Function Categories

The first step in determining revenue requirements by customer class is to allocate the test year O&M revenue requirement to functional categories. These categories are functions that the wastewater utility must perform in order to deliver wastewater service to City customers. For the wastewater utility they are: Administrative and General, Customer Service, Collection, Pumping, and Treatment.

The O&M allocations, by department, are shown in Table 43 below:

TABLE 43: WASTEWATER O&M ALLOCATION TO FUNCTIONAL CATEGORIES

DEPARTMENT	Total $ Allocation	Administrative and General	Customer Service	Collection System	Lift Stations and Pumping	Wastewater Treatment
Total Dept 536.101-Utilities - Sewer Administration	$ 7,653,942	$ 7,653,942	$ -	$ -	$ -	$ -
Total Dept 540.100-Water Service Center Management	$ 839,475	$ -	$ 839,476	$ -	$ -	$ -
Total Dept 540.300-WSC - Capital Improvements	$ -	$ -	$ -	$ -	$ -	$ -
Total Dept 540.207-Wsc-Meter Reading - Sewer	$ 738,419	$ -	$ 738,419	$ -	$ -	$ -
Total Dept 540.208-Wsc-Sewer Maint./Construction	$ 2,797,696	$ -	$ -	$ 2,797,696	$ -	$ -
Total Dept 550.100 Wpc Operations	$ 5,516,166	$	$	$	$	$ 5,516,166
Total Dept 550.200-Wpc-Third Ave Pump Station	$ 735,282	$ -	$ -	$ -	$ 735,282	$ -
Total Dept 550.202-Wpc-Maintenance Expense	$ 2,912,411	$ -	$ -	$ -	$ -	$ 2,912,411
Total Dept 550.300-WPC - Capital Improvements	$ -	$ -	$ -	$ -	$ -	$ -
Total Dept 550.800-Non_dep_Exp-Sewer Portion	$ -	$ -	$ -	$ -	$ -	$ -
Total Dept 566.101-Transfers out to func 101	$ 1,860,000	$ 1,860,000	$ -	$ -	$ -	$ -
GRAND TOTAL WASTEWATER UTILITY	$ 23,053,392	$ 9,513,942	$ 1,577,894	$ 2,797,696	$ 735,282	$ 8,428,578

5.2.2 O&M Allocation to Cost Components

Once O&M costs have been allocated to functional categories, the total O&M revenue requirement allocated to each functional category must be further allocated based on the operational need which they are designed to fulfill. For this allocation RFC has generally utilized the cost allocation methodology described in the Water Environment Federation's Manual of Practice No. 27, "Financing and Charges for Wastewater Systems."

The costs components utilized in this study are: volume or wastewater utility costs which are incurred on the basis of the quantity of wastewater discharged into the system; strength measures such as Biochemical Oxygen Demand ("BOD"), Total Suspended Solids ("TSS") and Phosphorus; and customer measures such as equivalent meters and monthly bills. A summary of the allocation of the wastewater O&M revenue requirement is included in Table 44 on the following page.

TABLE 44: WASTEWATER O&M ALLOCATION TO COST COMPONENTS

FUNCTIONAL CLASSIFICATION	Total $ Allocation	Volume Allocation	Strength			Customer	
			Allocation To BOD	Allocation to TSS	Allocation to Phosphorous	Customer Meters	Customer Bills
Administrative and General	$ 9,513,942	$ 2,402,564	$ 1,974,206	$ 1,974,206	$ 1,974,206	$ 1,100,760	$ -
Customer Service	$ 1,577,894	$ -	$ -	$ -	$ -	$ 1,577,894	$ -
Collection System	$ 2,797,696	$ 2,797,696	$ -	$ -	$ -	$ -	$ -
Lift Stations and Pumping	$ 735,282	$ 735,282	$ -	$ -	$ -	$ -	$ -
Wastewater Treatment	$ 8,423,578	$ -	$ 2,809,526	$ 2,809,526	$ 2,809,526	$ -	$ -
	$ 23,053,392	$ 6,015,542	$ 4,783,732	$ 4,783,732	$ 4,783,732	$ 2,678,654	$ -

5.2.3 Capital Cost Allocation to Functional Components

Similar to the allocation of the O&M revenue requirement described in the previous section, the capital revenue requirement must be allocated to functional categories. Table 45 below indicates the allocation of capital costs.

TABLE 45: WASTEWATER CAPITAL ALLOCATION TO FUNCTIONAL CATEGORIES

Allocation of Capital Costs to Functional Categories						
	Total	Administrative and General	Customer Service	Collection System	Lift Stations and	Wastewater Treatment
Breakdown of Fixed Assets by Function	**100%**	**0.32%**	**0.00%**	**82.79%**	**4.31%**	**12.58%**
Total Capital Expenditures	**$ 7,230,845**	**$ 22,823.92**	**$ -**	**$ 5,986,709**	**$ 311,745**	**$ 909,567**

$ Allocation of Water Fixed Assets to Functional Categories						
FIXED ASSET CATEGORY	Net Book Value	Administrative and General	Customer Service	Collection System	Lift Stations and	Wastewater Treatment

18Sanitary Sewers (Engg only)	$ 136,257	$ 136,257	$ -	$ -	$ -	$ -
Total Water Fixed assets	$ 57,119,603	$ 180,296	$ -	$ 47,291,030	$ 2,462,606	$ 7,165,071
% Breakdown	100.00%	0.32%	0.00%	82.79%	4.31%	12.58%

As the table above indicates, the basis for the allocation of capital costs was the existing level of wastewater utility investment in fixed assets. The existing net book value of each major asset class was allocated to the functional categories. The total capital revenue requirement, approximately 7 Million in the test year, was then allocated according to the proportion of existing investment in each functional category. For example, a large proportion of investment in wastewater fixed assets relates to the rehabilitation of the City's collection system ("Sewer SSR"). As such, the majority of the capital revenue requirement (82%) has been allocated to the collection system function.

5.2.4 Capital Cost Allocation to Cost Components

As with the allocation of the O&M revenue requirement described above, the functionally allocated capital revenue requirement must also be further allocated according to the operational need that each function is designed to fulfill.

Table 46 below summarizes this allocation.

TABLE 46: WASTEWATER CAPITAL ALLOCATION TO COST COMPONENTS

			Strength			Customer	
FUNCTIONAL CLASSIFICATION	Total $ Allocation	Volume Allocation	Allocation To BOD	Allocation to TSS	Allocation to Phosphorous	Customer Meters	Customer Bills
Administrative and General	22,324	19,944	960	960	960	-	-
Customer Service	-	-	-	-	-	-	-
Collection System	5,986,709	5,983,709	-	-	-	-	-

Wastewater Treatment	909,567	-	303,189	303,189	303,189	-	-
Total Capital Expenditures	7,230,345	6,313,397	304,149	304,149	304,149	-	-

5.2.5 Non-Rate Revenue Allocation to Cost Components

Non-rate revenue must be excluded from the O&M and Capital revenue requirements as these amounts are an offset to the revenue requirement which will be recovered from rates. Consequently, non-rate revenues are allocated to the cost components so that they can be removed from the total revenue requirement. In this case, non-rate revenues were allocated proportionally according to the total O&M revenue requirement allocation and can be seen in Table 47 below.

TABLE 47: WASTEWATER NON-RATE REVENUE ALLOCATION TO COST COMPONENTS

			Strength			Customer

5.2.6 Plant Balance Analysis

Once each component of the revenue requirements has been determined, wastewater strength units, by customer class must be estimated. These are the basis upon which the strength costs, determined in the previous step, are allocated to each customer class.

This allocation is performed via a proportional distribution of each measure of strength to each customer class, based on the contribution of that class to overall billed wastewater volumes. This calculation is shown in Table 48 below.

TABLE 48: WASTEWATER PLANT BALANCE ANALYSIS CALCULATIONS

CUSTOMER CLASS		Test Year Volume (CCF)	Biochemical Oxygen Demand mg/L	Pounds	Total Suspended Solids mg/L	Pounds	Phosphorous mg/L	Pounds	Test Year Combined Pounds
Treatment Plant Volumes		3,669,018	84.5	1,935,331.27	78.5	1,797,911.30	4.225	96,766.56	3,830,009
Less:									
Total Inside City Residential		1,576,668	100	989,080	93	916,437	2	17,177	1,922,694
Total Inside City Commercial/Industrial		1,398,721	100	877,451	93	813,007	2	15,238	1,705,696
Total Outside City Residential		208	100	129	93	120	2	2	251
Total Outside City Commercial/Industrial		7,012	100	4,399	93	4,076	2	76	8,550
Total System Billed Volumes		2,982,604	100	1,871,059	93	1,733,639	2	32,494	3,637,192
Total Infiltration and Inflow		686,412	15	64,272.49	15	64,272.49	15	64,272.49	192,817
Balance		-		(0)		(0)		-	-
Gallons per CCF	748								
Milligrams per Pound	453.592								
Liters per Gallon	3.78541								
% Infiltration and Inflow		23%							

As an example, consider Biochemical Oxygen Demand. The proportion of BOD contributed to the wastewater system by each class, is function of the overall volume contributed by that class. Therefore the BOD units are allocated to each customer class based on their proportion of total billed volumes. Inside City Residential customers, for example, are forecasted to contribute 1.5 Million CCF in billed wastewater volumes in the test year, or 53% of total billed volumes. Consequently, they are assigned 53% of total forecast BOD. The same calculations are performed for the remaining strength units, TSS and Phosphorous.

The result is a total level of strength units for each customer class, which is then used to determine unit costs by customer class and allocate the test year revenue requirement.

5.2.7 Calculation of Units of Service

The next step in the cost allocation process is to summarize the units of service, which are used as the basis for the allocation of the total revenue requirement to each of the customer classes. The units pertain to each of the cost components mentioned above (i.e. strength, volume and customer units). In the following step, the units will be used to determine a unit cost for each cost component.

The wastewater units of service are shown in Table 49 below.

TABLE 49: WASTEWATER UNITS OF SERVICE

WASTEWATER UNITS OF SERVICE					
		Residential		Commercial/Industrial	
	Total System (CCF)	Total Inside City Residential	Total Outside City Residential	Total Inside City Commercial/Industrial	Total Outside City Commercial/Industrial
Volume Units					
% Breakdown		52.9%	0.0%	46.9%	0.2%
Total System Billed Volumes	2,982,604	1,576,656	206	1,398,721	7,012
Total Infiltration and Inflow	686,412	362,852	47	321,900	1,614
Total Volume	3,669,016	1,939,517	253	1,720,620	8,625
Strength Units					
BOD	1,871,059	989,030	129	877,451	4,399
TSS	1,733,639	916,437	120	813,007	4,076
Phosporous	32,494	17,177	2	15,238	76
Total Wastewater Strength (Pounds)	3,637,192	1,922,694	251	1,705,696	8,550
Customer Units					
Meters	33,177	25,436	6	7,699	35
Bills	315,952	301,096	71	14,646	137

As mentioned above the units determined for each customer class are volume (the total forecast wastewater contribution) strength (the proportion of wastewater strength units determined in the plant balance analysis) and customer (equivalent meters and customer bills as in the water cost of service study).

5.2.8 Unit Cost of Service

Following the allocation of the wastewater revenue requirements to each of the cost components and the calculation of the units of service, a unit cost of service for each cost component can be determined. These unit costs are the basis by which the revenue requirements by customer class are determined.

The unit cost of service is the total revenue requirement, as allocated to the cost components, divided by the units of service attributable to each component and is shown in Table 50 on the following page.

TABLE 50: WASTEWATER UNIT COST OF SERVICE

Wastewater Units of Service		Strength			Customer	
CUSTOMER CLASS	Volume Allocation	Allocation To BOD	Allocation to TSS	Allocation to Phosphorous	Customer Meters	Customer Bills
Total Inside City Residential	1,939,517	989,080	916,437	17,177	25,436	301,096
Total Outside City Residential	253	129	120	2	6	71
Total Inside City Commercial/Industrial	1,720,620	877,451	813,007	15,238	7,699	14,646
Total Outside City Commercial/Industrial	8,625	4,399	4,076	76	35	137
Grand Total System Units of Service	3,669,016	1,871,059	1,733,639	32,494	33,177	315,952

Wastewater "Cash Basis" Revenue Requirements			Strength			Customer	
REVENUE REQUIREMENT	Total	Volume Allocation	Allocation To BOD	Allocation to TSS	Allocation to Phosphorous	Customer Meters	Customer Bills
Total Operation and Maintenance Expenditures	$ 23,053,392	$ 6,015,542	$ 4,783,732	$ 4,783,732	$ 4,783,732	$2,686,654	$ -
Unit Cost		$ 1.64	$ 2.56	$ 2.76	$ 147.22	$ 80.98	$ -
Total Capital Expenditures	$ 7,230,845	$ 6,318,397	$ 304,149	$ 304,149	$ 304,149	$ -	$ -
Unit Cost		$ 1.72	$ 0.16	$ 0.18	$ 9.36	$ -	$ -
Total Non-Rate Revenues	$ (423,552)	$ (110,524)	$ (87,892)	$ (87,892)	$ (87,892)	$ (49,362)	$
Unit Cost		$ (0.03)	$ (0.05)	$ (0.05)	$ (2.70)	$ (1.49)	$ -
Total System Revenue Requirements	$ 29,860,674	$ 12,223,415	$ 4,999,989	$ 4,999,989	$ 4,999,989	$2,637,292	$ -
Total System Unit COS	$ -	$ 3.33	$ 2.67	$ 2.88	$ 153.87	$ 79.49	$ -

For example, the total volume units are 3.6 Million CCF. This means that the O&M, Capital and Non-Rate Revenue Requirements cost $1.64, $1.72 and $(.03) per unit of wastewater volume. The total unit cost associated with wastewater volume is $3.33/CCF. The calculation is repeated for each cost component to determine the overall unit cost associated with wastewater volume, strength (BOD, TSS and Phosphorous) and customer service.

5.2.9 Revenue Requirements by Customer Class

The customer class revenue requirements are the basis for establishing alternative rates by customer class. The City's existing wastewater rate structure does not include distinct rates by customer class. At this time the City does not wish to make major rate structure changes. However, the revenue requirements by customer class are shown in Table 51 on the following page and are the basis for the alternative wastewater rates presented as appendix B to this report.

TABLE 51: WASTEWATER REVENUE REQUIREMENTS BY CUSTOMER CLASS

Wastewater Units of Service			Strength			Customer	
CUSTOMER CLASS		Volume Allocation	Allocation To BOD	Allocation to TSS	Allocation to Phosphorous	Customer Meters	Customer Bills
Total System Revenue Requirements	$ 29,850,674	$ 12,223,415	$ 4,999,989	$ 4,999,989	$ 4,999,989	$2,637,292	$ -

Check on Total System COS (Should be $0)	$ -						

The revenue requirement for each customer class is the total unit cost of service determined previously, multiplied by the units of service for each customer class. The result is a total allocation to each customer class made up of each of the cost components discussed previously. The allocation is based on each customer class's contribution to the wastewater utility's overall operating and capital costs, as represented by their units of service.

5.3 WASTEWATER RATE DESIGN

The wastewater rates have been calculated under the existing rate structure and under a new structure which recognizes the customer classes present in the City's CIS. The rate calculation under existing rates will be presented here, with the alternative rates by customer class presented as an appendix B.

5.3.1 Volumetric Rate Calculations

As mentioned above, the City did not indicate a desire to significantly modify the existing wastewater rate structure. Therefore RFC maintained various components of the existing water volumetric rates including:

- The existing inside/outside city differential (i.e. outside=110% of inside)
- The existing structure which charges the same volumetric rates for all customer classes
- The existing shift of some volumetric costs to the fixed service charge (i.e. a readiness to serve adjustment)

The calculation of the wastewater volumetric rates involves the following steps

- Determine total composite volumetric revenue requirement:
    - Adjust the test-year revenue requirement allocated to the volume cost component by the readiness to serve amount
    - Add the wastewater strength related cost components (BOD, TSS and Phosphorous)
    - Remove Beecher Metro Revenue
    - Add the inside and outside city revenue requirements to determine a composite revenue requirement for all customer classes
- Determine the composite wastewater units:
    - Multiply the units of inside and outside city customers by the existing I/O differential (Outside=110% of Inside)
    - Add those units together.
- Calculate Inside and Outside City Volumetric Rates:
    - Determine a composite rate for all customer classes by dividing the total composite revenue requirement determined above, by the total composite wastewater units
    - Multiply the composite rates by the Inside and Outside City differentials (100% for Inside City and 110% for Outside City) to determine the rates for each customer class.

The above calculations are summarized in Table 52 on the following page.

TABLE 52: WASTEWATER VOLUMETRIC RATE CALCULATIONS

5.3.2 Fixed Charge Calculations

As noted above, the City did not express a desire to change rate structures at this time. Consequently, the following aspects of the existing rate structure have been maintained including:

- The existing inside/outside city differential (i.e. outside=120% of inside)
- The existing shift of some volumetric costs to the fixed service charge (i.e. a readiness to serve adjustment)
- The flow equivalencies for the various meter sizes

The calculation of the wastewater fixed charges involves the following steps:

- Determine total composite fixed charge revenue requirement by summing the fixed charge revenue requirements (i.e. those allocated to the customer service related cost components) and the readiness to serve revenue requirement.
- Determine the composite fixed charge wastewater units:
    - Multiply the number of inside and outside city equivalent accounts by the existing I/O differential (Outside=120% of Inside)
    - Add those units together to determine the composite number of equivalent customer accounts
- Calculate Inside and Outside City Volumetric Rates by:
    - Determine an annual composite rate for all customer classes by dividing the total composite revenue requirement determined above, by the total composite wastewater equivalent accounts
    - Determine a monthly rate for the 5/8" equivalent account by dividing the annual rate by 12.
    - Multiply the composite fixed charges by the Inside and Outside City differentials (100% for Inside City and 110% for Outside City) to determine the monthly fixed charge per 5/8" equivalent account for inside and outside city customer classes.
    - Multiply the monthly fixed charge for a 5/8" equivalent account by the meter equivalencies for each meter size to determine the monthly fixed charge for the remaining meter sizes.

The calculations described in the narrative above are summarized in Table 53 on the following page.

TABLE 53: WASTEWATER FIXED CHARGE CALCULATIONS

CUSTOMER CLASS	Readiness to Serve Adjustment: Fixed Charge Revenue Requirement	Readiness to Serve Adjustment: Adjustment	Readiness to Serve Adjustment: Readiness to Serve Revenue Req.	Base Fixed: RR Allocated on Customer Services	Base Fixed: RR Allocated on Customer Bills

5.3.3 Summary of Existing and Forecast Wastewater Rates

Based on the calculations from the previous two sections, the existing and proposed rates for the forecast period are shown in Tables 54 and 55 on the following page.

Note that while the test year FY 2015 rates have been calculated within the cost of service study, the rates for FY 2016 and beyond are based on the overall rate revenue increase from the wastewater utility financial plan.

6. DISCUSSION OF BEST MANAGEMENT PRACTICES (BMP)

We reviewed the City's water and wastewater utility performance in relation to Best Management Practices that have been published by Fitch Ratings ("Fitch"). These criteria are used by Fitch when reviewing the performance of a utility as part of the bond rating process.

6.1 FINANCIAL PROFILE

"Long term integrated financial forecasting that considers future demand, expected rate increases, regulations, and infrastructure renovation and renewal needs."

In general, the City's practices are consistent with this BMP. This report includes ten year comprehensive financial plans for both the water and wastewater utilities. These were developed in collaboration with City staff and reflect the rate revenue increases necessary to adequately fund operation and maintenance expenditures, make necessary capital improvements and ensure fiscal sustainability for each utility on a going forward basis. In addition to these general objectives, the water utility financial plans reflect the transition from DWSD to the KWA, which is expected to lower the level of future rate increases and afford the City greater control over the water utility's operating costs.

"Policies ensure appropriate financial margins, including debt service coverage and operating liquidity levels."

In general the City is taking steps to improve consistency with this BMP. The aforementioned water and wastewater utility financial plans move the City towards an operating reserve target of 90 days of O&M and debt service. These reserves are critical to mitigate the risk inherent in operating a seasonal enterprise. That said, it is also importance to recognize the sensitivity of ratepayers to further increases, especially given the relatively high level of existing rates. Consequently, the City has decided to work up to the 90 day target over the next few fiscal years to mitigate the potential rate impact.

Coverage of existing water utility debt service is quite strong. This stems primarily from the fact that, given the City's past financial difficulties, it has limited access to capital markets for the purpose of funding its capital improvements. At this time, all major capital improvements are forecast to be made out of current rate revenues. If this policy is maintained throughout the forecast period, water utility debt service coverage will likely continue to improve. In the future the City may choose to leverage its water revenues via the Michigan Drinking Water Revolving Revenue Fund, which would spread the rate impact of the forecast capital improvements. Currently, the City does not have any outstanding wastewater debt.

"Regular financial reporting and monitoring systems enable policymaker's access to timely information on fiscal performance relative to the budget."

It is our understanding that the City's reporting systems are consistent with this BMP.

"Limited exposure to growth sensitive revenues, such as tap, connection, or impact fees."

The City's practices are consistent with this BMP. The City currently receives little to no revenue from growth related fees, mostly due to the fact that customer account growth has largely been negative or flat in recent years. Consequently the City is not overly reliant on such fees. However, if customer account growth becomes positive in the future, the City should consider implementing growth related fees to ensure that new customers are adequately compensating existing customers for their investment in the water and wastewater systems.
"Collection policies that regularly track the rate of timely payment receipts and enforce penalties against late payers or terminate service for non-payment."

The City has taken steps to improve consistency with this BMP. In recent years, account delinquency and non-payment has become a significant problem for the City. In addition, City staff has cited issues regarding potential water theft. Given these challenges, the City has engaged a consulting firm to aid in the analysis of their customer information system data, in an effort to recover the lost revenue associated with these issues. This is a critical in that it ensures paying customers are not bearing the burden of water theft going forward.

"Willingness of political leaders to adjust rates when necessary."

The City's practices are consistent with this BMP. Emergency Manager Darnell Early has the authority to raise rates as necessary to ensure the ongoing financial sustainability of the water and wastewater utilities. It is our understanding however, that input from political stakeholders will continue to be part of that City's rate adjustment process going forward.

"Limited exposure to financial operations of the general government, so that system revenues can be relied upon for use to operate and improve the utility. For transfers to the general fund policies that specifically limit their scope and growth are favorable."

The City is taking steps to improve consistency with this BMP. It is our understanding that approximately $10 million is due from the City's general fund to the water and wastewater utilities. A potential course of action would be to reduce the amount of administrative fees the water and wastewater utilities pay each year to the general fund, until the amount owed is paid back in full. Regardless of the method, the City has indicated that, as a worst case scenario, the general fund would repay the amount owed to the water and wastewater utilities by FY 2019.

"Compliance with industry accounting practices and establishment of appropriate internal controls."

It is our understanding that the City's accounting practices adhere to the generally accepted accounting practices ("GAAP") set forth by the Governmental Accounting Standards Board ("GASB").

"Rate affordability guidelines that consider absolute levels of rates and their affordability relative to income levels."

The City is working to improve consistency with this BMP. Affordability is a critical consideration for the City especially given the relatively high level of existing rates. As mentioned above, a key component of this study involved analyzing the impact of transitioning from DWSD to the KWA, a policy which should generate savings to ratepayers in lieu of what would have happened had the City continued to purchase water from DWSD.

6.2 DEBT PROFILE RELATED

"Prioritized capital improvement plans that cover at least five years and consider capacity, supply, regulatory and replacement and renewal needs."

The City's practices are consistent with this BMP. The City has provided five year capital improvements plans for the water and wastewater utilities as well as guidance for forecasting beyond that period, both of which have been incorporates into the water and wastewater financial plans. Based on our experience with utility operations and an examination of the provided plans, it is our opinion that the City is working to address capacity, supply and regulatory issues.

"Debt issuance policies including types, terms, and suitability under specific conditions, as well as the amount of variable-rate debt deemed appropriate."

Currently the City's wastewater utility has no debt and the level of water utility relatively modest. Though the debt associated with the joining KWA will increase this amount in the coming years, it will not reach unsustainable levels.

"Development of comprehensive policies on the use of hedge agreements and their disclosure prior to entering into any such agreements."

The water and wastewater utilities are not currently party to any such agreements and there are no plans to utilize such agreements in the future.

6.3 OPERATING PROFILE RELATED

"Key management industry experience and active participation in organizations that keep pace with sector issues, regulatory mandates and technological advances."

The City's practices are consistent with BMP in this regard.

"Use of professional engineers, either within the utility or outside of it, to prepare objective reviews of system performance and needs on regular basis and provide periodic revisions to construction cost estimates."

The City's practices are consistent with BMP in this regard.

"Regular consultation with regional and local growth planners, community development officials, and demographers to predict and, if possible, limit infrastructure needs related to population and business growth."

The City has been very active in such activities in recent years, as evidenced by their participation in the KWA effort to secure a more economical source of water to better meet the City's needs in the future.

Dennis – the attached pdf is the memo & table that hopefully addresses some of the info needs stemming from the meeting with the pastors last week. Jerry A. has looked at this document as well. In terms of key items at this point (that are mentioned in the memo)….

KWA may be hooked up by the end of this calendar year; weather permitting, etc. Even allowing for some slippage that is positive news

Whether you hooked to DWSD thru the county or directly; it is a $1mm add'l impact to the budget… an add'l 30% increase in rates over existing

They have $2mm already baked in the budget to fix that two mile 'bad' section of pipeline that might address a good portion of the current issues

They now have an outside consultant on the ground who is suppose to provide some preliminary indications next week to help improve the situation

Don't forget about the $2mm SRF loan restructuring (which we have not officially put on the table). Those $s would be available for more system improvements.

Again, sorry this took as long as it did. Let us know if this is what you had in mind or if you need anything else. Wayne – chime in if I missed anything.

See you @ 1:30

Thanks, that background is helpful.

I followed up with Detroit last week on the bill extensions and cut offs and the program is working better than expected. This is a model that I will be working with Jerry to adopt in Flint

Best,
Harvey

> · Another concern raised by DHS was the increase in the deposit for rental properties. This was necessary because renters paid the previous $100 deposit, then racked up water bills in excess of this amount and walked away. Of the affidavits currently out there, 82% are past due. I would also note that this is not mandatory, it is only required if a landlord is not willing to put the water bill in their name.
>
> · The bottom line is that they realize it is an issue, but the General Fund doesn't have the money to run general City operations, much less subsidize water rates.

Subject: RE: Flint Water Cost Analysis

Ms. Murphy,
Thank you. The calculations in the table was provided by treasury and I was seeking clarification. I am not a water expert, but I learned that typically, most rates have two components.

1. Fixed-cost recovery charge
This charge is based on the size of the water meter at the home or business. Most residential customers will have a meter between 5/8$^{th's}$ of an inch and 1 inch.

2. Consumption Charge
This charge is based on the amount of water used. The rate for usage is determined by the distance and elevation of the home or business from the water source.

MCF is used in many place for calculating rates; however, since Flint is currently not using this calculation, what are the cost components that make up the $149 avg. monthly charge to the resident?

Best,
Harvey

Mr. Hollins,
Jerry Ambrose asked me to respond to your request for more information on the Flint water cost analysis chart which you sent him yesterday. Please see the attached chart; it contains an added analysis by Jerry. The sections for which you asked for data can not be provided as we don't calculate prices in the manner you are comparing.

Jerry's chart clearly represents what Flint has been talking about - a major increase in water rates would be necessary to pay the additional charge to purchase DWSD water.

Jerry,
Thank you very much. I believe 1MCF equals 7480 gallons of water. If that is true then 10 units = 1 MCF.
Best,
Harvey

Subject: PRESS RELEASE: Flint Takes Steps to Address Water System Issues
Attachments: Flint Water TTHM Release.pdf

For Immediate Release:

City of Flint Takes Proactive Measures to Improve Water Distribution System and Address Compliance Issues

Flint, Michigan – January 2, 2015 – The City of Flint's Department of Public Works has been actively working to address upgrades and repairs to the city's water distribution system. These actions appear to have corrected several long time concerns with the system as well as known compliance issues with the system, including a recent temporary increase in the maximum contamination level (MCL) of trihalomethanes (TTHM) found in water samples collected from the system during a testing period which ended November 30, 2014. The public was notified of the violation as a precautionary measure as required by the Michigan Department of Environmental Quality (MDEQ).

TTHM is a common by-product of the water chlorination process. Increased levels in some water samples collected in the city were an indicator of weaknesses in the distribution system and treatment process, which were due to years of deferred repairs and upgrades to a very old system. The City of Flint's DPW is and has been pursuing a comprehensive plan to make critical upgrades to its water distribution system for the long term health and operation of the system and to mitigate any future issues.

The levels of TTHM in the water were elevated marginally above the MCL in some samples, resulting in a less urgent "Tier 2" Environmental Protection Agency notification. This means that the EPA believes there is no immediate risk to consumers and/or the system may have already returned to acceptable levels by the time the notice was issued. Although TTHM is considered to be an environmental pollutant that can be carcinogenic, it

can only be hazardous if consumed in water containing the elevated levels at a rate of two liters per person, per day for 70 years. The City of Flint wants to assure the public that according to the MDEQ the water is safe for drinking and all other purposes.

The City of Flint worked closely with the MDEQ to correct the issue by flushing hydrants and replacing key valves in the distribution system. These measures have shown to be effective in not only lowering the TTHM levels in the system, but have also improved the overall health of the system. The Michigan DEQ has acknowledged and appreciates the progress of the City's preemptive evaluation of operations which identified the deficiencies and the corrective measures being taken. The latest round of testing has shown a significant decrease in levels across the board, with most samples falling well below the MCL. It is expected that all sample levels will be well below the MCL in the next round of quarterly scheduled testing in March of 2015.

Flint's DPW welcomes the rigorous review of the MDEQ to ensure steady progress is made on this important issue. "Our proactive plan of replacing valves, flushing hydrants and making other adjustments to the system has shown both promising short term results as well as strengthening our water distribution capability in the long term," said Flint DPW Director Howard Croft. Both the City of Flint and the MDEQ expect the corrective measures being implemented will resolve the issue by early 2015.

The improvements in MCL levels also mirror the increased consistency being seen in chlorine residuals, flow rates, and overall water quality within the city. As part of the DPW strategic plan and Capital Improvement Plan, there are additional improvements coming to the 600 miles of distribution main including, pipe replacements, leak detection, hydraulic modeling, and enhanced asset management features. The Department of Public Works will continue to provide public education and communication about the quality, the process, and the continual improvements occurring within the system as part of the overall management of the water system.

Hi Chief and Harvey,

Sara asked me to put this Flint Journal guest column from the Flint mayor (attached) on your radar. Mayor Walling is seeking to drag the governor into the conflict with both hands, even demanding that the governor visit the city.

Sara mentioned that it was the City of Flint that wanted to make the change in the first place, and wanted to determine whether that's a point you think we should make. We've been staying very high-level at this point.

Thanks for your assistance!

Dave

Dave:
I'm attaching an op-ed that Flint Mayor Dayne Walling has given MLive-The Flint Journal. I'm writing a story about his request that the governor visit Flint.
I did hear back from Terry Stanton the last time we asked for a response to the mayor's water improvement plan and I used his comments, however Walling has told me since that he's expecting a response from the governor himself and I'll probably be using that in the story I'm working on also.

By Flint Mayor Dayne Walling

Access to safe and clean water is a basic human right. And a citizen's right to safe drinking water should not be based on how much money you earn, the neighborhood you live in or if your local government is under the control of an emergency manager.

All citizens have a fundamental right to know that such a critical resource as their water supply is safe and accessible. But that is not happening in Flint at the moment.

That is why, on January 18th, I forwarded a request that Governor Snyder adopt my Flint Water Improvement Plan. My plan, focused on the areas of safety, quality, access, investment and education, starts by calling for 100 percent safety as the standard for water.

The plan calls for reporting of water testing to the public by city officials, an amnesty program to reduce fees for Flint water turn-ons, accelerated water system capital improvements and partnerships with community organizations to help with water payment assistance. I'm also reaching out to other state and elected officials for support.

The request comes as residents, as evidenced in a series of recent community meetings, continue to have concerns about the quality of Flint's water. Earlier in 2014, several boil-the-water advisories were issued by the city because of issues with bacteria found in water in some parts of Flint. Gov. Snyder's appointed emergency manager recently told customers that Flint was in violation of the Safe Drinking Water Act because of the high level of trihalomethane (TTHM) -- a byproduct of chlorination -- in drinking water samples last year.

A contradictory order from the city saying the water was safe but could present risks for infants, the elderly and those with compromised immune systems confused residents further and compounded the worries of Flint's vulnerable populations. Marry that with costly water rates that have threatened individuals' access and you have the crisis of concern and confidence swirling in Flint today.

Sadly, because Flint is under Michigan's controversial emergency manager system of governance, locally elected officials have been largely limited to serving as sounding boards to justifiably worried Flint residents.

This is unacceptable. Not only should Governor Snyder visit Flint in the midst of this ongoing crisis, but his administration should make it the priority that the community expects.

It's time for the Snyder administration to do what is best for the citizens of Flint---immediately. There is nothing more important in Flint right now than fixing the water problems.

This will take time and money so the sooner the new investments are made, the better.

Access to safe and clean water is a basic human right. And a citizen's right to safe drinking water should not be based on how much money you earn, the neighborhood you live in or if your local government is under the control of an emergency manager.

All citizens have a fundamental right to know that such a critical resource as their water supply is safe and accessible. But that is not happening in Flint at the moment.

That is why, on January 18th, I forwarded a request that Governor Snyder adopt my Flint Water Improvement Plan. My plan, focused on the areas of safety, quality, access, investment and education, starts by calling for 100 percent safety as the standard for water.

The plan calls for reporting of water testing to the public by city officials, an amnesty program to reduce fees for Flint water turn-ons, accelerated water system capital improvements and partnerships with community organizations to help with water payment assistance. I'm also reaching out to other state and elected officials for support.

The request comes as residents, as evidenced in a series of recent community meetings, continue to have concerns about the quality of Flint's water. Earlier in 2014, several boil-the-water advisories were issued by the city because of issues with bacteria found in water in some parts of Flint. Gov. Snyder's appointed emergency manager recently told customers that Flint was in violation of the Safe Drinking Water Act because of the high level of trihalomethane (TTHM) -- a byproduct of chlorination -- in drinking water samples last year.

A contradictory order from the city saying the water was safe but could present risks for infants, the elderly and those with compromised immune systems confused residents further and compounded the worries of Flint's vulnerable populations. Marry that with costly water rates that have threatened individuals' access and you have the crisis of concern and confidence swirling in Flint today.

Sadly, because Flint is under Michigan's controversial emergency manager system of governance, locally elected officials have been largely limited to serving as sounding boards to justifiably worried Flint residents.

This is unacceptable. Not only should Governor Snyder visit Flint in the midst of this ongoing crisis, but his administration should make it the priority that the community expects.

It's time for the Snyder administration to do what is best for the citizens of Flint---immediately. There is nothing more important in Flint right now than fixing the water problems.

This will take time and money so the sooner the new investments are made, the better.

Friend,

Access to clean, safe, affordable water is a basic human right.

That's why I just sent Gov. Snyder my Flint Water Improvement Plan. It focuses on the areas of safety, quality, access, investment and education. My letter urges the governor to quickly implement these ideas so that Flint's water is 100% safe.

Please contact Gov. Snyder by calling (517) 335-6397 (or by clicking here) and ask him to take action immediately to implement my plan and ensure Flint's water is safe.

My plan offers new ideas and also builds on successful models of utility, energy and assistance programs at the state and federal levels. Here is my plan:

Safety & Quality

- 100% Safety is the standard
- City of Flint releases testing data to assure safety and expands testing to households with support from the Michigan Department of Environmental Quality
- Support alternatives for those advised not to drink the water by their doctors through the Michigan Health Endowment Fund and community partners to protect the vulnerable like seniors and infants
- Bring on experienced river water treatment operational management in the City of Flint
- Require water testing data to be released quarterly by law in all Michigan communities

Access

- Announce an amnesty program for turn-ons and reduce the turn-on cost in Flint
- Develop a revised payment plan policy to allow customers to come back on to the Flint system
- New Federal and State partnership to establish new Drinking Water Emergency Assistance Fund for customers (modeled on Federal and State energy utility programs: Low Income Home Energy Assistance Program; Michigan Energy Assistance Program; State Emergency Relief)

Investment

- Accelerate water system improvements outlined in the City of Flint Capital Improvement Plan through Federal and State Investments
- State approves City of Flint's Distressed Cities Fund applications
- Federal and State forgiveness of payment to Drinking Water Revolving Loan Fund
- Federal and State financing for future improvements
- City Water Department implements budgeted FY15 projects including leak detection, valve repairs, new pipes and meter replacements

Education

- Develop a community partnership to provide household and business customers with information on testing and conservation
- Ongoing partnership with Michigan Department of Human Services, United Way, Salvation Army and community organizations to provide information on water assistance
- Expand youth energy initiative to assist households with conservation and efficiency (piloted in summer 2014 with Northwestern High School students, EcoWorks and Consumers Energy)

The struggle with our water has gone on for too long. The state must take action and do its part.

Please ask Gov. Snyder to take action immediately to implement my plan and ensure Flint's water is safe.

Thank you for your ongoing support.

Sincerely,

Dayne

P.S. -- Please send this to friends and family so they can take action too!

Subject: FLINT WATER NOTES

Hey, friends. Anticipating more coverage this week on Flint, want to make sure we are all looped in and on the same page. Treasury takes calls on funding and money and the EM. DEQ takes calls on water quality. Here's what I can share about the water quality part.

Total Trihalomethanes (TTHM) are a byproduct of too much chlorine to kill organic material in a water supply. They are among the 80 toxins water suppliers monitor. They are considered a long-term health hazard. As such, they're sampled from water systems every quarter. Systems are required to remain below 80 parts per billion on a yearly average (four quarters). Flint exceeded the average in the course of three quarters last year.

Water system operators around the state periodically get a high result for TTHMs. When consecutive quarters of testing remain at high levels, it's usually a sign that operators are using too much chlorine to address high levels of organic matter in their water source. This most frequently affects systems that use surface water as a source. And several municipal water systems around the state do use surface water (rivers) as a source.

When a water system exceeds this standard, the operator gets a very formally worded violation notice from DEQ that says, effectively, "hey, your numbers are high. Alert your customers and figure out how you're going to bring your numbers back down." This is not as serious as a boil water advisory situation. But, the (think decades) long-term risk of drinking water with high TTHMs is an increased risk of exposure to cancer causing agents, so it's not a situation that the state can accept as status quo.

Because TTHM is measured on an annual (quarterly) basis, it will take a couple quarters of clear results before the city's average falls below the guidelines. This means Flint will probably be issuing another public notice about TTHM in March, despite that the high samples were late last summer.

Flint's numbers have dropped dramatically since the November testing and they're presently in compliance with state drinking water standards.

The water as it leaves the plant is clean, sanitary and safe. However, the water supply system is old, poorly maintained and many residents' connections are also old and poorly maintained. Thus, some residents are experiencing water that smells off or is discolored. This is from the transmission system, not the production system. The three top issues appear to be

a. Hard water interacting with cast iron pipes, causing water that looks rusty (and likely tastes a bit irony)
b. Water sitting too long in the pipes because of valves not working properly or limited users in some sections of the system; or,
c. Residents with old homes that have cast iron connections contributing to the hard water issue.

So, how do we message this issue in light of the many variables at play?

1. Right now, water produced at the Flint plant is meeting state safe drinking water standards.
2. DEQ is aware that many residents have concerns about smell, color and other aesthetic qualities of their water. There are several potential causes for aesthetic water conditions. Residents with these concerns are encouraged to contact the City first to report problems. They also can contact the Michigan DEQ, but the City operates the system and needs to be alerted to concerns with their system to help document problem areas and prioritize improvements.
3. Total Trihalomethane (TTHM) is odorless and colorless. It is regarded as a long-term health concern. TTHM was included in the list of toxins screened under the Safe Drinking Water Act because of its potential for long-term potential health concerns. This is why it is only sampled quarterly. The water operator is required by law to notify residents when the annually averaged

standard has been exceeded, and the system operator is required to take active steps to get back into compliance with the standard for TTHM.

4. Residents received notice because the law requires transparency and works to help ensure residents can make informed decisions. The notice residents received early this month is a totally separate issue from the water discoloration issues some residents are reporting.
5. The DEQ continues working with Flint Water system operators to ensure that residents receive water that complies with state drinking water standards. This system is tested regularly and rigorously, and the results are reported to customers as outlined in the Safe Drinking Water Act.

Here's what our Bureau of Children and Adult Licensing emailed on Friday:

City of Flint Warns of Potential Health Risks Caused by the City's Drinking Water

The city says there's been too much disinfection byproduct in Flint's water system recently, something that -- over many years could cause liver, kidney or central nervous system problems and an increased risk of cancer.

The notice from the city says Flint water is safe to drink but warns that those with a severely compromised immune system, who have an infant or who are elderly may be at increased risk and should seek advice about drinking water from their health care provider.

For others, there is no need to boil water or take other actions, the notice says.

It is recommended that licensed child care providers and licensed adult foster care and homes for the aged providers seek medical advice or use bottle water when serving individuals at increased risk as outlined above.

For more information, go to to the city's website at http://cityofflint.com.

Flint Hires International Urban Water Experts of Veolia North America to Assess City's Water Issues

Flint, Michigan – February 10, 2015 – The City of Flint has retained a team of urban water experts from Veolia North America to conduct an analysis of the city's water system. Veolia, which is the world's largest water services and technology company, will assess how Flint's water is tested and distributed, including reviewing water treatment processes and operations, laboratory testing and analysis, and engineering reports that detail the city's treatment and distribution systems.

"We understand the frustration and urgency in Flint," said David Gadis, vice president of Veolia North America's Municipal & Commercial Business. "We are honored to support your community with our technical expertise so that together we can ensure water quality for the people of the city of Flint."

Veolia anticipates its analysis to take less than two weeks, at which time they will present findings to City officials, including the Mayor, City Council and the Emergency Manager. Once the findings are presented, city officials will determine how to move forward.

"Addressing the City's water challenges are the top priority right now and it is important to bring in an independent, highly qualified team to work with us to address the safety and quality issues," said Mayor Dayne Walling.

"Until we have completed our analysis, we cannot say for certain how long it will take to provide solutions to Flint's current water situation," said Gadis. "We have extensive experience handling challenging river water sources, reducing leaks and contaminants and in managing discolored water."

"Veolia worked diligently to respond to our Request For Proposal in a thorough, professional way and demonstrated the ability to immediately support us as we ensure safe, clean water for our residents," said Emergency Manager Jerry Ambrose.

The Veolia team hit the ground running Tuesday morning, meeting with water officials to provide an overview of the work to be conducted. "We look forward to helping Flint's team find ways to address and improve the city's drinking water operation," Gadis said.

The company designs and provides water, waste and energy management solutions to communities and industries across the country, including providing water and wastewater services to 530 communities in North America. More information is available at www.veolianorthamerica.com.

Subject: Proposed Press Conference on Flint Drinking Water

Per the ongoing issues in Flint concerning their drinking water, I would offer the following recommendations. Let's discuss.

Recommendation

Press Conference in Flint – Wednesday, Thursday or Friday.

Participants

Mayor of Flint
Dan Wyant – Michigan Department of Environmental Quality
Nick Lyon – Department of Community Health
Susan Hedman – Region 5 Administrator or EPA
Harvey Hollins – Governor's office
Local Public Health Department

Announcement

Federal – State – Local action plan to address Flint Drinking Water

1. Governor Snyder names Dr. Dean Sienko as Flint drinking water Public Health Advisor.
2. All Flint schools water will immediately be tested to ensure that drinking water is safe.
3. Advisories will be disseminated recommending citizens flush your cold water pipes, use only water from the cold water tap for drinking, cooking and especially for making baby formula.
4. Implementation of fully optimized corrosion controls in the Flint drinking water system.
5. Expanded water testing of at risk properties.
6. Offer water testing at no cost to Flint residents to assure water is safe.
7. Convene a safe drinking water " Technical Review Advisory" to ensure best technology, practices and science is being utilized, including EPA's expertise and assistance from their Office of Research and Development.
8. Offer bottled water and premixed formula if test results indicate high levels of lead.
9. Accelerate water system improvements to address replacement of lead service lines.

I know that I'm a broken record on this one, but I need some specific attention to Flint today. I need you all to reconstruct a timeline of events from the records we have relating to the Flint KWA DWSD controversy as it is becoming unwieldy. Please go back and review the Flint procedures and find the initial decision making process relating to the switchover. The first time I remember it is in 2012 (August I think) when the county started pitching the project at council. Then we instituted Mike Brown as EM and from there on it became to a certain extent our problem. However, if I remember right, this was a Flint idea from the start. Then, if you can trace the financial drivers of the decision to present day it would be important. I think for the most part the explanation you had in the distressed cities reports were helpful…my point being that this was an idea to help the city survive and without drastic changes it wouldn't have, KWA being one of them. We'll take any other ideas that you have.

September 28, 2015

State of Michigan
Executive Office of the Governor
P.O. Box 30013
Lansing, MI 48909

Governor Snyder,

Access to safe, affordable drinking water is a basic necessity for every community. It is completely unacceptable that respected scientific experts and our trusted local physicians have verified that the City of Flint's drinking water is dangerous for our citizens, especially our most vulnerable young people.

As a result, I am formally requesting assistance as suggested by the experts on the frontline of this public health crisis. Here are the top priorities we should work together to address:

1. **Swift transfer to a safe source of water until the Karegnondi Water Authority (KWA) project is complete next year.** Your administration has the ability to ensure a financially acceptable and responsible contract between Flint and the Detroit Water and Sewerage Department, particularly in light of the public health implications with the Flint River supply.

2. **Equally urgent is the need for corrosion control as recommended by independent scientific experts.** There are chemical treatment additives that could help reduce this corrosion. I urge you to help the city implement anti-corrosion methods immediately. The current emergency makes the January timeline unacceptable.

3. **Filters and bottled water assistance.** Flint water touches the entire city. Whether it's a person's home, work, school, restaurant or place of worship, access to safe, clean drinking water should not be hindered. Water filters, used in conjunction with corrosion control methods, are necessary to help guard against toxic exposure.

   I have been working with the philanthropic community and private sector to secure donations to acquire filters and water; however, more funds will be necessary to effectively cover the thousands of residents impacted. I would like to formally request emergency funding to help supplement the acquisition of water filters and bottled water. Any and all appropriate state or federal money to help accomplish this feat should be considered.

SENATE MINORITY LEADER
JIM ANANICH

4. **Support for completion of the KWA pipeline.** It is presumed that the upcoming KWA pipeline will solve a number of problems associated with the current sourcing of Flint's water from the Flint River. I am requesting a meeting between representatives from your office, KWA board members and project engineers to discuss any options to expedite the pipeline's construction.

5. **A long-term commitment to addressing outdated infrastructure.** A recent EPA report just outlined the billions of dollars necessary over the next several decades to adequately secure safe water for our entire state. You have the position and opportunity to be a national leader on moving the debate forward on this topic so that we can avoid the type of catastrophe my community is grappling with today.

I look forward to working with you to deliver on these concrete and urgent action items to alleviate the public health crisis facing our residents.

We jeopardize any progress and comeback for our cities and state if we cannot ensure safe, basic necessities for our families or if we cannot come together swiftly to fix an identified, severe threat to the safety of our people.

Sincerely,

Jim Ananich

September 28, 2015

State of Michigan
Executive Office of the Governor
P.O. Box 30013
Lansing, MI 48909

Governor Snyder,

Access to safe, affordable drinking water is a basic necessity for every community. It is completely unacceptable that respected scientific experts and our trusted local physicians have verified that the City of Flint's drinking water is dangerous for our citizens, especially our most vulnerable young people.

As a result, I am formally requesting assistance as suggested by the experts on the frontline of this public health crisis. Here are the top priorities we should work together to address:

1. **Swift transfer to a safe source of water until the Karegnondi Water Authority (KWA) project is complete next year.** Your administration has the ability to ensure a financially acceptable and responsible contract between Flint and the Detroit Water and Sewerage Department, particularly in light of the public health implications with the Flint River supply.

2. **Equally urgent is the need for corrosion control as recommended by independent scientific experts.** There are chemical treatment additives that could help reduce this corrosion. I urge you to help the city implement anti-corrosion methods immediately. The current emergency makes the January timeline unacceptable.

3. **Filters and bottled water assistance.** Flint water touches the entire city. Whether it's a person's home, work, school, restaurant or place of worship, access to safe, clean drinking water should not be hindered. Water filters, used in conjunction with corrosion control methods, are necessary to help guard against toxic exposure.

   I have been working with the philanthropic community and private sector to secure donations to acquire filters and water; however, more funds will be necessary to effectively cover the thousands of residents impacted. I would like to formally request emergency funding to help supplement the acquisition of water filters and bottled water. Any and all appropriate state or federal money to help accomplish this feat should be considered.

SENATE MINORITY LEADER
JIM ANANICH

4. **Support for completion of the KWA pipeline.** It is presumed that the upcoming KWA pipeline will solve a number of problems associated with the current sourcing of Flint's water from the Flint River. I am requesting a meeting between representatives from your office, KWA board members and project engineers to discuss any options to expedite the pipeline's construction.

5. **A long-term commitment to addressing outdated infrastructure.** A recent EPA report just outlined the billions of dollars necessary over the next several decades to adequately secure safe water for our entire state. You have the position and opportunity to be a national leader on moving the debate forward on this topic so that we can avoid the type of catastrophe my community is grappling with today.

Subject: Proposed Press Conference on Flint Drinking Water

Per the ongoing issues in Flint concerning their drinking water, I would offer the following recommendations. Let's discuss.

Recommendation

Press Conference in Flint – Wednesday, Thursday or Friday.

Participants

Mayor of Flint
Dan Wyant – Michigan Department of Environmental Quality
Nick Lyon – Department of Community Health
Susan Hedman – Region 5 Administrator or EPA
Harvey Hollins – Governor's office
Local Public Health Department

Announcement

Federal – State – Local action plan to address Flint Drinking Water

1. Governor Snyder names Dr. Dean Sienko as Flint drinking water Public Health Advisor.
2. All Flint schools water will immediately be tested to ensure that drinking water is safe.
3. Advisories will be disseminated recommending citizens flush your cold water pipes, use only water from the cold water tap for drinking, cooking and especially for making baby formula.
4. Implementation of fully optimized corrosion controls in the Flint drinking water system.

5. Expanded water testing of at risk properties.

6. Offer water testing at no cost to Flint residents to assure water is safe.

7. Convene a safe drinking water " Technical Review Advisory" to ensure best technology, practices and science is being utilized, including EPA's expertise and assistance from their Office of Research and Development.

8. Offer bottled water and premixed formula if test results indicate high levels of lead.

9. Accelerate water system improvements to address replacement of lead service lines.

Subject: Filter Conversation

Today, I had a conference call with Andy Levit, Amy Hovey, Rep. Phelps and Rep. Neeley. The objective was to coordinate the acquisition and distribution of water filters for Flint residents.

>>>List of Potential Donors

Flint Community Foundation	10,000 filter request in the Health Endowment Fund Request
Meijer	Donated 1500
HomeDepot	Rich Baird to follow up
Ice Mountain	Stacie and Andy Levit have reached out to no avail
Absopure	Stacie and Andy Levit have reached out to no avail
GM	5,000-10,000 water filters via the United Way
Dow	Considering Funding through its Foundation
Coca Cola	Bottled water
UAW Region 1	Bottled water
Cindy Estrada, UAW VP	$10,000 towards the purchase of water filters
Norman Jewel, UAW	Funding
Walmart	Funding through its Foundation
McClaren Hospital	Funding
Consumers Energy	Funding
Absopure	Donating filters
Ice Mountain	Donating filters
Similac	Baby Formula
Rite Aid & Walgreens	Possible Donors

>>>DISTRIBUTION

*County Health will track distribution in coordination with Red Cross

*Request that the state provide a coordinator on the ground in Flint.

>>>ANCILLARY DISCUSSION

*Phelps said nothing on the call

*Neeley wanted to talk about the switch back to the Great Lakes Authority

*Amy asked if the Governor will declare a state of emergency in order to draw down on FEMA dollars. I indicated that we are not at the stage yet, that we should allow the experts to determine if whether an emergency exists, and in the meantime take appropriate steps to provide some relief to the residents in Flint.

One of my 'take-aways' from the meeting this afternoon was to follow up on whether they could use those Distressed Cities' $s for filters. Remember last year they did receive $2mm which they used for water related items. This year they want funds for the property assessing area. Their project cost is more than the grant limit. It is not clear they realize that. The deadline application is Oct 15 if they were willing to change the application. Assuming that is doable.

With Wayne away (and before the 1:00 mtg)... a call was set up actually earlier today with Natasha Henderson. Do you care if we still do that ? The email setting it up is attached. Obviously we are not going to commit to anything.

Let me know if you need anything else.

Subject: RE: FDCVT - Flint

Tom,

Below are the answers to your questions. If you have any further questions, let us know. Thank you.

Do we know whether Flint has yet applied for any of these (FDCVT) $s ?
ANSWER: We received an application from the City of Flint on September 17th. The amount requested for the project is $2M (the limit for a local unit) and it is estimated to take $3.1M to complete the entire project. They also indicated that if full funding is not awarded, it is doubtful that they will be able to move forward with the project. The proposed project is:

"The city proposes to hire a qualified contractor to provide property assessing services. Specifically, this contractor will create digital property sketches of all improved properties, evaluate existing property conditions and improvements by providing real property data verification, and conduct a comprehensive appraisal valuation study. This process will take place over a period of 3 years, from June 1, 2016 to July 1, 2019."

Do we know if they have plans to?
ANSWER: Since they asked for the entire $2M for the above project, we would assume they are not submitting any further projects, however we are not sure.

And have they asked (& rec'd) $s from this program previously i.e., last year, and if so, what did they use those $s for?
ANSWER: Treasury awarded Flint two grants in FY 2015 under the FDCVT program. Treasury has not yet received any reimbursement requests from the City. Therefore, we have not distributed any of the FDCVT grant related funds to the City. The two grants are:

Awarded	Project Name	Brief Description
$1,100,000	Water Pollution Control Incinerator Shutdown	Water system enhancements through improved waste management
$900,000	Water Main Leak Detection Survey and Condition Assessment	Water system enhancements through leak detection and pipe assessments

FOR IMMEDIATE RELEASE
www.michigan.gov/treasury

Contact: Terry Stanton
(517) 335-2167

$5 million in grants available for local governments facing financial distress

Money for special projects to free up funds for services

Municipalities experiencing financial struggles can apply for a $5 million grant program that can help fund special projects and free up tax dollars for important services.

Applications for the Financially Distressed Cities, Villages, and Townships grant program are now available. Municipalities interested in applying for an award must submit applications to the Department of Treasury by 11:59 p.m. on Thursday, Oct. 15, 2015.

All cities, villages, and townships, experiencing at least one condition of "probable financial distress" as outlined in Public Act 436 of 2012, the Local Financial Stability and Choice Act*, are eligible to apply.

"This program offers critical assistance to municipalities facing significant financial difficulties," Gov. Rick Snyder said. "Grant dollars can help troubled cities, villages, and townships fund projects which, in turn, frees up valuable tax dollars for other critical services that benefit residents and taxpayers in those communities."

Grant funding may be used to pay for specific projects, services, or strategies that move the city, village, or township toward financial stability. Preference will be given to applicants from local units in which:

- A financial emergency has been declared in the past five years;
- An approved Deficit Elimination Plan for the General Fund is currently in place; or,
- Two or more conditions indicating "probable financial distress" currently exist.

For more information about FDCVT grants, including the application for cities, villages, and townships, visit www.michigan.gov/revenuesharing.

*Conditions of "probable financial distress" relating solely to school districts are not included as conditions for FDCVT, as school districts are not eligible.

Natasha,

I am following up on yesterday's phone call with you.

Angela will contact you to set up a conference call for tomorrow afternoon. Because Wayne is out of town Tom Saxton will participate in the discussion regarding your request. Tom and I would request you, Peter Bade and Howard Croft be on the call.

We have a number of follow-up questions: What is the basis for the estimated $18M cost to temporarily reconnect to the Great Lakes Water Authority? What is the timeline? Why didn't Viola advise the City about the potential for elevated lead levels when using Flint river water? What assurances do you have indicating a temporary reconnection to the Water Authority resolves the elevated lead problem or other system problems? Who are the assurances from? Did the Viola report recommend using Ortho Phosphates to treat the water?

Do we know whether Flint has yet applied for any of these $s ? Do we know if they have plans to? And have they asked (& rec'd) $s from this program previously i.e., last year. [knowing that it hasn't been going that long]. If so, what did they use those $s for.

Finally, if they hadn't applied yet... given the current Flint water situation;
Could they use these grant funds to purchase filters for individual residents for use in their homes ?

If you can get back to me quickly I would appreciate it. Thanks

Subject: RE: FDCVT - Flint

To be honest I am not sure… I don't have the history/background to know whether we would actually turn them/communities down (& we might) if they can't fully fund their project. I am sure that area (assessing) is in chaos as well in Flint.
If that were the case i.e., we would say no to the assessing project; then yes in terms of the switch to water related projects. I think the number I heard yesterday was 10,000-15,000 filters for $250k. Or maybe you create a program to replace the curb-to-home lead piping.

The call with Flint got cancelled today. They are not available now at that time.

Thanks. Are you suggesting they modify their request to one that asks for money for filters instead of the assessing since the assessing cost exceeds the grant and they couldn't do the project anyway?

Subject: RE: FDCVT - Flint

Tom,

Below are the answers to your questions. If you have any further questions, let us know. Thank you.

Do we know whether Flint has yet applied for any of these (FDCVT) $s ?
ANSWER: We received an application from the City of Flint on September 17th. The amount requested for the project is $2M (the limit for a local unit) and it is estimated to take $3.1M to complete the entire project. They also indicated that if full funding is not awarded, it is doubtful that they will be able to move forward with the project. The proposed project is:

"The city proposes to hire a qualified contractor to provide property assessing services. Specifically, this contractor will create digital property sketches of all improved properties, evaluate existing property conditions and improvements by providing real property data verification, and conduct a comprehensive appraisal valuation study. This process will take place over a period of 3 years, from June 1, 2016 to July 1, 2019."

Do we know if they have plans to?
ANSWER: Since they asked for the entire $2M for the above project, we would assume they are not submitting any further projects, however we are not sure.

And have they asked (& rec'd) $s from this program previously i.e., last year, and if so, what did they use those $s for?
ANSWER: Treasury awarded Flint two grants in FY 2015 under the FDCVT program. Treasury has not yet received any reimbursement requests from the City. Therefore, we have not distributed any of the FDCVT grant related funds to the City. The two grants are:

Awarded	Project Name	Brief Description
$1,100,000	Water Pollution Control Incinerator Shutdown	Water system enhancements through improved waste management
$900,000	Water Main Leak Detection Survey and Condition Assessment	Water system enhancements through leak detection and pipe assessments

This financial assistance has allowed the City to replace miles of aged pipeline and begin efforts to install a specialized filter at the Water Treatment Plant.**

In February, Flint was awarded a total of $2 million through two *Financially Distressed Cities, Villages, and Townships Grants*. $1.1 million was awarded for water system enhancements through improved waste management while $900,000 was awarded for water system enhancements through leak detection and pipe assessments.

To: Muchmore, Dennis (GOV) <muchmored@michigan.gov>
Subject: Filter Conversation

Today, I had a conference call with Andy Levit, Amy Hovey, Rep. Phelps and Rep. Neeley. The objective was to coordinate the acquisition and distribution of water filters for Flint residents.

>>>List of Potential Donors

Flint Community Foundation	10,000 filter request in the Health Endowment Fund Request
Meijer	Donated 1500
HomeDepot	Rich Baird to follow up
Ice Mountain	Stacie and Andy Levit have reached out to no avail
Absopure	Stacie and Andy Levit have reached out to no avail
GM	5,000-10,000 water filters via the United Way
Dow	Considering Funding through its Foundation
Coca Cola	Bottled water
UAW Region 1	Bottled water
Cindy Estrada, UAW VP	$10,000 towards the purchase of water filters
Norman Jewel, UAW	Funding
Walmart	Funding through its Foundation
McClaren Hospital	Funding
Consumers Energy	Funding
Absopure	Donating filters
Ice Mountain	Donating filters
Similac	Baby Formula
Rite Aid & Walgreens	Possible Donors

>>>DISTRIBUTION

*County Health will track distribution in coordination with Red Cross

*Request that the state provide a coordinator on the ground in Flint.

>>>ANCILLARY DISCUSSION

*Phelps said nothing on the call

*Neeley wanted to talk about the switch back to the Great Lakes Authority

*Amy asked if the Governor will declare a state of emergency in order to draw down on FEMA dollars. I indicated that we are not at the stage yet, that we should allow the experts to determine if whether an emergency exists, and in the meantime take appropriate steps to provide some relief to the residents in Flint.

Best,
Harvey Hollins III, Director
Governor's Office of Urban Initiatives

I wish we could get realistic rather than inflamed, but I'm afraid the flames have long ago been stoked by some missteps that occurred in the switchover to Flint River water. Let's see what we can do.

> One of my 'take-aways' from the meeting this afternoon was to follow up on whether they could use those Distressed Cities' $s for filters. Remember last year they did receive $2mm which they used for water related items. This year they want funds for the property assessing area. Their project cost is more than the grant limit. It is not clear they realize that. The deadline application is Oct 15 if they were willing to change the application. Assuming that is doable.

With Wayne away (and before the 1:00 mtg)... a call was set up actually earlier today with Natasha Henderson. Do you care if we still do that ? The email setting it up is attached. Obviously we are not going to commit to anything.

Let me know if you need anything else.

Subject: RE: FDCVT - Flint

Tom,

Below are the answers to your questions. If you have any further questions, let us know. Thank you.

Do we know whether Flint has yet applied for any of these (FDCVT) $s ?
ANSWER: We received an application from the City of Flint on September 17th. The amount requested for the project is $2M (the limit for a local unit) and it is estimated to take $3.1M to complete the entire project. They also indicated that if full funding is not awarded, it is doubtful that they will be able to move forward with the project. The proposed project is:

"The city proposes to hire a qualified contractor to provide property assessing services. Specifically, this contractor will create digital property sketches of all improved properties, evaluate existing property conditions and improvements by providing real property data verification, and conduct a comprehensive appraisal valuation study. This process will take place over a period of 3 years, from June 1, 2016 to July 1, 2019."

Do we know if they have plans to?
ANSWER: Since they asked for the entire $2M for the above project, we would assume they are not submitting any further projects, however we are not sure.

And have they asked (& rec'd) $s from this program previously i.e., last year, and if so, what did they use those $s for?
ANSWER: Treasury awarded Flint two grants in FY 2015 under the FDCVT program. Treasury has not yet received any reimbursement requests from the City. Therefore, we have not distributed any of the FDCVT grant related funds to the City. The two grants are:

Awarded	Project Name	Brief Description
$1,100,000	Water Pollution Control Incinerator Shutdown	Water system enhancements through improved waste management
$900,000	Water Main Leak Detection Survey and Condition Assessment	Water system enhancements through leak detection and pipe assessments

See the attached press release…noting Flint's awards (2).

The writeup below was included in Flint Water Talking Points from last winter.

The City has received significant financial assistance through both grant programs and bond restructuring initiatives administered by the MI Department of Treasury. This financial assistance has allowed the City to replace miles of aged pipeline and begin efforts to install a specialized filter at the Water Treatment Plant.

In February, Flint was awarded a total of $2 million through two *Financially Distressed Cities, Villages, and Townships Grants*. $1.1 million was awarded for water system enhancements through improved waste management while $900,000 was awarded for water system enhancements through leak detection and pipe assessments.

Do we know whether Flint has yet applied for any of these $s ? Do we know if they have plans to? And have they asked (& rec'd) $s from this program previously i.e., last year. [knowing that it hasn't been going that long]. If so, what did they use those $s for.

Finally, if they hadn't applied yet… given the current Flint water situation;
Could they use these grant funds to purchase filters for individual residents for use in their homes ?

If you can get back to me quickly I would appreciate it. Thanks

To be honest I am not sure… I don't have the history/background to know whether we would actually turn them/communities down (& we might) if they can't fully fund their project. I am sure that area (assessing) is in chaos as well in Flint.
If that were the case i.e., we would say no to the assessing project; then yes in terms of the switch to water related projects. I think the number I heard yesterday was 10,000-15,000 filters for $250k. Or maybe you create a program to replace the curb-to-home lead piping.

The call with Flint got cancelled today. They are not available now at that time.

So we don't forget the money; Flint is now running a $14,000,000 deficit in the WaterFund due to two lawsuits that have gone against the City. It has reduced what they can bill some folks have stopped paying believing they will be getting big credits or refunds. Also water cont be shut off for nonpayment under one suit

I talked with Dayne Walling at length today a few minutes ago, and Harvey and I had separate meetings with one of the Flint minister groups and then Rep. Neely. Our conversations were cordial for the most with the normal concerns being expressed. I told Rep. Neely that I felt he hadn't gotten enough respect and insight into our thoughts on this and we expanded our backgrounder for him and he was very appreciative. He actually cancelled a Black Caucus meeting called for today on this due to Harvey and our meeting. I have Dan and Nick calling him just to update.

More importantly, we have the proposal back from DWSD for a reconnect:

1. Short term reconnect is ok until KWA starts operating;
2. No reconnect fee and immediate reconnect;
3. Expenses incurred at actual cost although no estimate at this time
4. A fixed monthly rate of $662,100 + a commodity rate of $8.93mcf for current 15-16 FY;
5. Rate is over and above water sales to Genesee County Drain Commission;
6. A water wholesale adjustment;
7. Only extends to Flint;
8. Rates for 16-17 FY would be the same as other customers.

Mayor Duggan is more than willing to lend his support.

I'm asking Saxton for a ballpark calculation. We would have to find them the money for this reconnect, but Dayne is more than open (as is Ananich to a lesser degree) to finding some revolving fund that they would repay perhaps on an extended basis or maybe using some guarantee to reduce the borrowing costs.

I don't know what they said so I can't speak to denouncing them. But everyday of inaction compounds the politics of this issue. We have secured around 30 thousand dollars for a filter program from several UAW VPs as well as 50k from GM. We are still waiting on a state emergency professional to help our community react professionally and promptly. The only person I have heard from since Monday's call is Director Wyatt and he has been asking good questions and seems like he recognizes a problem and wants solutions.

I say all that to say, we are happy to quiet critics and we think the best way to do that is progress. I feel like we offered several easy steps last week that would have shown prompt action and none of that has been realized. Further, we have seen DHHS working to discredit the pediatricians in our community rather than work to help the most vulnerable.

I would prefer you and I talk about this daily so we are working together but I have called you and Beth each twice with no return. I know we are all busy but I hope you will agree that more communication during,what we view as a crisis, is the best way to keep us moving forward together.

You moving back into our good graces. :)

A little concerned a press event is planned and scheduled without Jim having any idea what is going to take place other than what you indicated as a filter voucher program. Maggie from DEQ just emailed so I will call her and see if she has any details.

Subject: Re: Progress Michigan

I don't know what they said so I can't speak to denouncing them. But everyday of inaction compounds the politics of this issue. We have secured around 30 thousand dollars for a filter program from several UAW VPs as well as 50k from GM. We are still waiting on a state emergency professional to help our community react professionally and promptly. The only person I have heard from since Monday's call is Director Wyatt and he has been asking good questions and seems like he recognizes a problem and wants solutions.

I say all that to say, we are happy to quiet critics and we think the best way to do that is progress. I feel like we offered several easy steps last week that would have shown prompt action and none of that has been realized. Further, we have seen DHHS working to discredit the pediatricians in our community rather than work to help the most vulnerable.

I would prefer you and I talk about this daily so we are working together but I have called you and Beth each twice with no return. I know we are all busy but I hope you will agree that more communication during,what we view as a crisis, is the best way to keep us moving forward together.

Subject: Flint Water Followups Early Next Week

Dear Governor,
Thank you for your continued efforts to address the problems with Flint's water and systems. The situation is taking on greater and greater urgency even as we work to respond. I appreciate your willingness to keep all options on the table including Flint returning to Detroit water. I believe this is a necessary step given all of the complications of this past year and what we are still facing.

I spoke with Chief of Staff Muchmore yesterday afternoon. I am requesting that you work with the State Legislature to identify the new funds and financing mechanism that are needed for the switch. That is one essential aspect and we are working on the others and appreciate your team's support on those as well. I would ask for a time for us to talk about this early next week as we are also hoping to meet with DWSD in that timeframe.

Thank you again for the focus and initiatives being put forward today.

Sincerely,
Mayor Walling

Subject: RE: Flint

Probably not (in terms of a reason not to)... it is not clear to me that you will have an immediate fix on the water issues (e.g., coloring, lead, etc).

You will have issues/costs in standing down the water plant & costs when switching to KWA. We haven't seen those estimates.

We are in this fix in part because DWSD had kicked the City off their system so I am not sure I have a ton of confidence in their numbers or deal. Hopefully as you are saying there are no hidden costs.

And we need to figure out how best to pay for it.

I had not forgotten about this request... Joe F. pulled some background/numbers for me. DEQ controls it in terms of how it is used programmatically. There are some $s in their fund balance. My sense is we couldn't 'loan' them money i.e., you end up with lending of credit issues. I will look at it further when I get back Tues.

Subject: RE: Release on Flint

What if they are shut ins or can't get there? Where's the relief coming from? Is the Flint Transit Authority willing to extend complimentary transportation? Who is going to explain to the recipients how the filter fits on their faucet?

I know from experience that my wife never grew up building things out of Erector Sets, and she's terrible at reading "part a attaches to part b with two bolts enclosed in the third packet. Don't use the ones marked only for Delta faucets" oh, you get the point.

Just a suggestion from a syntax point of view, the construction of the first sentence appears to allow anyone who is a DHHS client and anyone who is a Flint resident to receive a water filter. It isn't clear that it applies to a person who is a Flint resident who receives public assistance and not to other Flint residents. Secondly, don't forget that other Flint residents also should be entitled to a water filter and although the press release is about DHHS clients, we don't want to create additional confusion. A throw-away line about the other residents might be wise.

Talked at length with Geralyn about this just now. Think is a good thing, and shows immediate follow up from action steps announced Friday. Added bonus is that it should be pretty easy for Flint clients and residents and have a "no wrong door" approach too just in case. Please see attached and below.

This is slated for distribution at 4 p.m. Need to hear if any concerns from anyone ASAP.

Otherwise, it's a go.

Thanks much,
SW

Subject: Release on Flint
Importance: High

Attached is the draft release we would like to issue ASAP regarding the new plan for water filter distribution in the city of Flint.

At a meeting with multiple community partners today, our local MDHHS office realized they could do distribution from the 2 Flint offices as long as the local community action agency could assist them in storing the larger quantities of filters.

Locally, the groups will be issuing a press release from the local health department discussing distribution, but we feel it is important to also send this from MDHHS.

We are happy to discuss this with Ron Fonger if you want him to be the first press call we make once we issue it.

Dennis,

Just an update. Health Endowment Fund board members have unanimously indicated that they will be approving the Flint Community Foundation's request of $250,000 for the purchase of water filters. We have sent a letter of intent to the community foundation and United Way of Genesee County. Our letter will enable the community foundation to release funds for water filters with the assurance that we will be making a $250,000 grant later this year.

Subject: DRAFT City of Flint Solution
Attachments: City of Flint Water Funding Solution.pdf

Importance: High

Colleagues,

Please find attached summary of where the State Budget Office believes we are based on this morning's meeting hosted by Director Wyant. This reflects the State commitment of resources towards provision of filters, reconnecting to Detroit Water & Sewage, and home/school/other inspections. Your quick review would be appreciated, since the Governor wants to share with legislative leaders yet today. I have included your budget officers to assist in the review.

Open issues are: (1) where to place the appropriation for the Flint re-connect and (2) whether (and what) boilerplate we may need/want.

Thanks.

Nancy Duncan
Deputy State Budget Director
517-373-0870

CITY OF FLINT

Dayne Walling
Mayor

January 18, 2015

The Honorable Rick Snyder
Governor, State of Michigan
P.O. Box 30013
Lansing, MI 48909

RE: Flint Water Improvement Plan

Dear Governor Snyder:

On behalf of the Flint community, I am writing to convey serious concerns about water quality and to request your support for my proposed Flint Water Improvement Plan. Access to safe and clean water is a basic human right, and, therefore, policy and budget decisions need to ensure that water is affordable and secure for everyone in Flint and all across Michigan It is essential there is City, State and Federal cooperation to address the challenges here and to meet the needs of vulnerable populations.

The Flint Water Improvement Plan is focused in five areas: safety, quality, access, investment and education. The plan puts safety and quality first because this is fundamental. It is designed to be a sustainable solution for the City of Flint and the community as we move towards a new permanent water supply from Lake Huron through the Karegnondi Water Authority. My plan offers new ideas and also builds on successful models of utility, energy and assistance programs at the State and Federal levels.

Safety & Quality

- 100% Safety is the standard
- City of Flint reports testing data to the public to assure safety and expands testing sites and frequency
- Bring on experienced river water treatment operational management in the City of Flint

Access

- Announce an amnesty program for Flint water service turn-ons and reduce the turn-on fee
- Develop a revised affordable payment plan policy to encourage customers to return
- Design Federal and State partnership to establish new Drinking Water Emergency Assistance Fund for the elderly and vulnerable families

Investment

- Accelerate water system improvements outlined in the City of Flint Capital Improvement Plan through Federal and State investments
    - State approves City of Flint's Distressed Cities Fund applications

- Federal and State support for replacement or forgiveness of payment to the Drinking Water Revolving Loan Fund due to Flint's status as a distressed community
- Federal and State grants for infrastructure improvements in alignment with the Flint Master Plan

* City Water Department implements budgeted FY15 projects including leak detection, valve repairs, new pipes and meter replacements

Education

* Develop a community partnership with universities to provide household and business customers with information on testing and conservation
* Ongoing partnership with Michigan Department of Human Services, United Way, Salvation Army and community organizations to provide information and water assistance with the Keep the Water Flowing Fund and support services
* Expand youth energy initiative to assist households with conservation and efficiency (piloted in summer 2014 with Northwestern High School students, EcoWorks and Consumers Energy)

It is also critical to restore the public confidence in Flint Water. The implementation of this plan must be accompanied by extensive community engagement including local elected officials. My objective is to work with you and your appointed officials, State Senator Ananich, State Representatives Phelps and Neeley, Congressman Kildee, community groups, businesses, churches, foundations, the Flint City Council, and all of the City of Flint and government personnel.

It is imperative that we communicate better and provide residents more information. I understand representatives from the Michigan Department of Environmental Quality will be joining a public forum this week at City Hall. This engagement going forward is vital so thank you for supporting their efforts. I think this issue of transparency is important for communities all across the State. I recommend a review of the applicable laws and policies and, at a minimum, a new requirement that water testing data be reported publicly no less than quarterly by law in all Michigan communities in Flint's population category.

Thank you for the consideration Governor. There is nothing more important in Flint right now than fixing the water problems. We must work together to identify funds to repair and update the water treatment facilities and city-wide infrastructure and to help those persons without access to clean water so that the entire Flint community has sustainable, safe, secure and affordable water now and into the future. This is an important issue for the state of our State of Michigan and I urge you to work with us to implement solutions.

Sincerely,

Dayne Walling, Mayor
City of Flint

CC: Flint City Council President Joshua Freeman; Congressman Dan Kildee; State Senator Jim Ananich; State Representative Sheldon Neeley; State Representative Phil Phelps; Flint Emergency Manager Jerry Ambrose

About

Corporations have been getting way with far too much for far too long. It is time that we, the citizens of the world, educate ourselves and take action against these Corporations. We all understand that for past few generations, we have allowed laws to be written, tax incentives to be created and have allowed loop holes to be made in environmental policy. We have allowed lobbiests in Washington , and other governments around the world, to make this capitalist institution called the "Corporation" get away with practices that are unacceptable. We have not understood the consequences until it is too late. We have felt too overwhelmed by the do's and don'ts that we have felt we had to respect, that we have allowed these powerhouses to benefit from massive profits, while we the majority are struggling.

It is time that we the people take matters into our own hands. It is time to take responsibility for our ignorance. We must forgive ourselves for allowing this economic "Grand Canyon" between the mega wealthy and the other 90% of us. We hear our leaders ask us to make further sacrifices by accepting higher interest rates in order to pay for the mess they got us into. They have repeatedly tried to take away our voice. It is time forgive us our sins and move forward. We will no longer allow these Corporations and Government puppets to silence us.

Like others before us, we are taking matters into our own hands. We are going to start keeping tabs on these Corporations. We are going to collect information and share it. We are going to spread the truth as far as we can. Most importantly we are going to take action!

Be a voice in a voiceless world. Share your knowledge of what you know with us so that we can unite and learn from each other, and become a source of power and change.

Hey Corporations! We are watching you!

We are Anonymous

We are Legion

We never Forgive

We never Forget

Expect Us!

Subject: Flint Meeting

So, just so I understand, the rates went up from the Detroit rates when they went to the Flint River? If that is true I'd be pissed also. We probably need an accounting of this water issue. Costs to date, old rate v. today's rate, any new hook charges, etc.

In a discussion about this with Rich, he recited a conversation with Daddow in which Daddow said that the $847,000 a month is a reduction from their previous rate. Daddow had no objection to a shorter term fix as it would mitigate some of the costs that were to be added to the water charges at GLWA for present customers for a year and a half which Bob seemed to think made sense.

I asked him to review with Daddow this whole thing and see if they could be rehooked for 15 months or so.

My plan is to talk to Jerry A. et al. I don't have that old cost & rate info for Flint in my head. At the time it was more of Andy's gig but we will get it.
I will check too as to what they (the City) think of the rfp response for that water consultant i.e., if it is actually going to add value. And don't forget about that loan restructuring; that is about another $2mm+ that could be used to replace bad lines.

Let me ask as a clarification, this is what the city would pay for the water it receives. The upcharge shouldn't be done as a profit since the city has the town all screwed up. All they should want to do is pay their costs of delivery, which from everything I hear they'll have enough trouble getting the public to do. I would think the city would be willing to straighten out this mess before they have a riot on their hands.

Flint Hires International Urban Water Experts of

Veolia North America to Assess City's Water Issues

Flint, Michigan – February 10, 2015 – The City of Flint has retained a team of urban water experts from Veolia North America to conduct an analysis of the city's water system. Veolia, which is the world's largest water services and technology company, will assess how Flint's water is tested and distributed, including reviewing water treatment processes and operations, laboratory testing and analysis, and engineering reports that detail the city's treatment and distribution systems.

"We understand the frustration and urgency in Flint," said David Gadis, vice president of Veolia North America's Municipal & Commercial Business. "We are honored to support your community with our technical expertise so that together we can ensure water quality for the people of the city of Flint."

Veolia anticipates its analysis to take less than two weeks, at which time they will present findings to City officials, including the Mayor, City Council and the Emergency Manager. Once the findings are presented, city officials will determine how to move forward.

"Addressing the City's water challenges are the top priority right now and it is important to bring in an independent, highly qualified team to work with us to address the safety and quality issues," said Mayor Dayne Walling.

"Until we have completed our analysis, we cannot say for certain how long it will take to provide solutions to Flint's current water situation," said Gadis. "We have extensive experience handling challenging river water sources, reducing leaks and contaminants and in managing discolored water."

"Veolia worked diligently to respond to our Request For Proposal in a thorough, professional way and demonstrated the ability to immediately support us as we ensure safe, clean water for our residents," said Emergency Manager Jerry Ambrose.

The Veolia team hit the ground running Tuesday morning, meeting with water officials to provide an overview of the work to be conducted. "We look forward to helping Flint's team find ways to address and improve the city's drinking water operation," Gadis said.

The company designs and provides water, waste and energy management solutions to communities and industries across the country, including providing water and wastewater

services to 530 communities in North America. More information is available at www.veolianorthamerica.com.

Importance: High

I wanted to send you what we had on Flint water in follow-up to the meeting with the pastors. I know we/I had said we would have it early this week. It has been a challenge on a couple of fronts to pull the numbers together. As always in these types of situations it is assuring that the numbers are properly scrubbed & they are 'apples to apples'. Anyway that is why it is taking some time.

The attached are drafts. We have a call with Jerry tomorrow a.m. There are some 'blanks' still particularly on some some of the historical data. Just to give you a sense of the increase the current $149 monthly rate was approx $80/$110ish a few years ago. But we will confirm that with Jerry et al tomorrow a.m.

Again, the attached are drafts. I am sure they will be tweaked tomorrow after talking to Jerry. So please don't share these with anyone yet.
We will have this done tomorrow. But after looking at the drafts please let us know if this is what you had in mind. Thanks

Dennis – the attached pdf is the memo & table that hopefully addresses some of the info needs stemming from the meeting with the pastors last week. Jerry A. has looked at this document as well. In terms of key items at this point (that are mentioned in the memo)….

KWA may be hooked up by the end of this calendar year; weather permitting, etc. Even allowing for some slippage that is positive news

Whether you hooked to DWSD thru the county or directly; it is a $1mm add'l impact to the budget… an add'l 30% increase in rates over existing

They have $2mm already baked in the budget to fix that two mile 'bad' section of pipeline that might address a good portion of the current issues

They now have an outside consultant on the ground who is suppose to provide some preliminary indications next week to help improve the situation

Don't forget about the $2mm SRF loan restructuring (which we have not officially put on the table). Those $s would be available for more system improvements.

Again, sorry this took as long as it did. Let us know if this is what you had in mind or if you need anything else. Wayne – chime in if I missed anything.

See you @ 1:30

SUBJECT: City of Flint Water Rates

Attached and below is information regarding the increase in water and sewer rates for the City of Flint since 2010.

- The data shows the significant deficit position of the water fund which was not rectified until 2013 when water rates were increased by 26%. The data also shows the lack of capital investment for a system as old as Flint.

- This condition is acknowledged in the City's recently adopted Capital Improvements Plan which identified approximately $50M in needed capital improvements over the next several years. This deficiency was also noted in the rate study commissioned by the City of Flint in 2014.

- According to the City, if Flint reconnected to DWSD for the next 18 months, the estimated monthly cost would be more than $1M per month totaling approximately $18M. This includes a fixed monthly charge of $846,700 plus the cost of actual water usage, minus the cost of operational expenditures at the Water Treatment Plant. Even with the elimination of future capital improvements, most of the additional cost would need to be funded with an additional increase to existing rates. Such an increase could approach 30%.

- The option of purchasing DWSD water from the County would be on parity with purchasing water directly from DWSD.

- The KWA previously advised the City that the connection to KWA may take place in mid-2016, but has now stated that weather conditions permitting, the connection could be made as early as December 2015.

- The $8M capital costs to upgrade the Water Treatment Plant was made to be able to treat both river water and KWA water. This upgrade has been funded with the cost reduction in operating costs achieved by not buying water from DWSD during the interim period.

- As you are aware, the City has retained Veolia as an outside water consultant to assist in maintaining the safety and improving the quality of water produced by its water system, and their initial analysis is due to be completed within the next two weeks. In addition, the City's current budget includes $2M for replacement of a 2-mile pipeline segment that is anticipated to significantly address some of the current water issues.

Average monthly bill in 2015 - note that water and sewer are not billed separately; the charges are included within the same bill regardless of water usage.

Water service charge	$22.90
Sewer service charge	$34.48
Total service charge	$57.38

Per unit rate:	
Water	$ 7.92
Sewer	$ 5.17
Total per unit	$13.09

Average family of four uses 7 units per month.
Their bill for usage would be: 7 x 13.09 = 91.63 + 57.38 service charge = $149.

If additional information is desired, please let me know.

City of Flint Water Rate History

Year (Date Effective)	Average Monthly Water/Sewer Bill*	Percentage Change in Water/Sewer Rates	Water Fund** Total Operating Revenue	Water Fund** Unrestricted Net Position	Water Fund** Capital Improvements
2010	$64	12%	$31,956,754	-$5,795,973	$2,091,160
1/15/2011	$82	29%	$36,762,663	-$12,443,265	$1,403,916

This is an old note which summarizes some of the early issues with the system and why they wanted to go to the KWA. Thought you might be interested. Did we get any info for the ministers about how the Detroit bill extensions and cut offs are working?

Subject: Flint Water Bills

Dennis,

There is some information attached on the Flint water issue you asked us about. I summarize a few of the key points:

- The water system has been running at deficits for years. When the previous EFM left the City in 2004, the water system has a reserve of approximately $60 million. When Mike Brown was appointed, this had turned into a $20 million deficit due to years of not passing along to consumers the rate increases of over 10% hitting the system from DWSD. Slides 5 & 6 of the attached power point show this pretty dramatically.
- Substantial increases over the past few years are an attempt to reflect the actual costs of running the system.
- Another concern raised by DHS was the increase in the deposit for rental properties. This was necessary because renters paid the previous $100 deposit, then racked up water bills in excess of this amount and walked away. Of the affidavits currently out there, 82% are past due. I would also note that this is not mandatory, it is only required if a landlord is not willing to put the water bill in their name.
- The bottom line is that they realize it is an issue, but the General Fund doesn't have the money to run general City operations, much less subsidize water rates.

The two page word document (attached) provided by the EFM gives you a good overview of what is going on. They believe that a switch to KWA is part of the solution for high water rates in the City.

City Of Flint Water History Facts

Current Treatment Plant was put into service in 1954.

Current 72" main pipeline was completed in 1970.

Flint signed a 30 year contract with Detroit Water and Sewer Department in the mid 1960's.

The contract with DWSD has expired and we are currently operating on a yearly extension.

In 2006 Flint completed a $48,000,000 upgrade of the existing Water Plant (required by the MDEQ & for backup only).

Flint's Water & Sewer System is approximately a $300,000,000 Enterprise.

Flint's Water & Sewer System is designed to deliver water to over 200,000 people with over 1,500 miles of infrastructure.

Flint's most recent census count shows a population of approximately 102,000 in 2010.

Flint's census population in 2000 was approximately 124,000.

The water system had over 45,000 customers in June of 1999.

The water system had just over 36,000 customers by June 2011.

The "Fixed Costs" that must be covered to maintain the system and deliver quality water have increased over time.

CITY OF FLINT
WATER NON-PAYMENT TURN-OFF POLICY

1. Water services to any customer may be shut off if the account is not paid until after 30 days after the due date. (City ordinance 46-52 (h))

2. Non-payment turn-offs are done only Monday through Thursday. The Customer Service Center does not schedule non-payment turn-offs on Fridays, Saturdays, Sundays, or most recognized holidays.

3. Illegal usage, broken payment arrangements and NSF (non-sufficient funds) turn-offs are done at any time without additional notice.

4. Turn-off notices are mailed to delinquent customers fifteen (15) days before actual turn-off.

5. The water customer is responsible for maintenance of all plumbing in the premises including connection to City water mains or sewer lines.

6. If a customer disputes a water bill and is unable to resolve the issue with Customer Service personnel, the customer may request an administrative review. Further information on any water account may be obtained by calling (810) 766-7015 or visiting the Customer Service Center at 1st Floor, City Hall, 1101 S. Saginaw St.

Preliminary Options for Future City of Flint Water Sources

Consider a New Negotiated Contract with Detroit Water and Sewer Department

PRO'S	CON'S
No upfront capital costs	Lack of control over new / fixed changes
Possibility to negotiate a lower rate	Past practices
Ability to "Blend" water sources to further control costs	

Consider a Contract with the Karegnondi Water Authority

PRO'S	CON'S
Voting member of KWA board	Capital cost (debt service)
Ability to "Blend" water sources to further control costs	Uncertainty of final costs
Raw water is an asset for attracting new buisnesses	

Blended Use of the Flint River

PRO'S	CON'S
Helps control cost of water	

*** CURRENTLY NO DECISIONS HAVE BEEN MADE REGARDING THE FUTURE WATER SOURCE

Improvements for City of Flint Water System

Reduce Leakage

- **Finalize a Preventative Maintenance Plan**
  - (Planning started in January 2012, requires funding, … part of Operational Costs)
  - Will help identify repair area's

- **Reduce water theft**

- **Replace water meters**
  - We currently have an eighteen month plan to replace all meters with more efficient "*Smart Meters*"

- **Encourage routine household checks**
  - "Faulty" toilets are a significant reason for household water loss. and unexpected larger bills.

Other Leakage concerns

- ✓ Transmission Loss
- ✓ Fire Hydrants
- ✓ Incorrect water bills
- ✓ Non-Payment

Response to Treasury regarding water rates, etc.

The cost of water and sewer in the City of Flint has become one of the most vexing issues facing the Emergency Financial Manager. When the Emergency Manager was appointed in December 2011 the water system had a $20 million deficit. In order to address this deficit the EM was forced to increase water and sewer rates by over a combined 120% in the past 18 months.

When the previous EFM left the City in 2004, the water system has a reserve of approximately $60 million. In the intervening years several things occurred: for three of five years (2007-2011) no rate increases were passed along to customers even though Detroit charged increases of over 10% per year; in the years when increases were passed along those amounts did not equal the actual cost of the system; the City chose to use the equity built up in the Water and Sewer funds until that was no longer available; a large lawsuit was settled; the City must pay for the $48 million MDEQ upgrades required at the Water Treatment Plant; and unbilled or unpaid water and sewer charges increased significantly.

In the past 18 months water and sewer rates have been increased to reflect the actual costs to operate the water and sewer system. Major leaks in the distribution system have been repaired. Unpaid water and sewer usage is now being addressed and the water affidavit process is part of this problem.

The City of Flint currently allows landlords to put the water and sewer billing in the name of the renter. This affidavit process holds the landlord harmless for any water costs. The deposit for the affidavit has been set at $100, which is the lowest in the County. The deposit fees in the County range from a low of $100 to a high of $500. The City is raising its rate to $350, which puts us about in the middle of the range. Depending on usage, this will cover 60 to 90 days' water charges and reduce the amount of uncollected billing. Keep in mind, any water not paid for is eventually charged to those who do pay through increased rates.

Because the deposit is so low in relation to the current charges, renters quickly owe more than the deposit, and find it easier to simply walk away from the rental and forfeit the deposit. This results in the City being on the hook for the unpaid bills. Currently there are 4,893 affidavits, and 4029 of them (82%) past due. This facctor alone totals to just under $3 million. In addition, when the renter walks away, the City has no way of knowing that the property is vacant. Many times the landlord rents the property again, without filing an affidavit, and the water continues to be charged to the former renter, again adding uncollected bills to the City. In the past the collection rate for past due accounts, when turned over to a collection agency, has been about 3% on average. Keep in mind that this is a deposit, not a fee, and can be refunded when the renter leaves the property. Also, the landlord can avoid the renter's deposit requirement by keeping the water and sewer billing in his name.

The City is also studying the potential to hold the landlord accountable for the water charges under certain conditions, such as failure to notify the City when a renter leaves and then renting the property again without filiing a new affidavit.

The City recognizes that the high cost of water is a factor which is causing low income residents to choose to leave the City and the increase in the deposit fee might accelerate that choice. However, many of the surrounding communities charge a higher deposit than does the City o Flint. Renters are leaving the City because they can get better housing for less money, live in safer neighborhoods with better schools, have their water charges decrease by about half, and have their insurance rates reduced by approximately 50%.

Water and sewer costs have resulted in about 8,000 current customers to be more than 60 days past due. Many are senior citizens who have lived in Flint their entire life, paid their taxes, etc. and now find themselves unable to pay their water bill. This concerns the City more than the issue of deposits. We have put in place for this year the ability for citizens to direct a part of their city tax refund to help people with their water bills, and we are reviewing other options as well as scheduled meetings with agencies involved in helping low income people with their bills.

We further recognize that we have staffing issues and water theft to address. The City is able to complete about 120 water shut-offs per week. At that rate we can not keep up with delinquent account shut-offs. The city also reconginzes that water theft through meter by-pass or unauthorized turn-on must be resolved.

Ultimately, the City must find a way to hold down future increases in the cost of water, to bring them more in line with the Genesee County water customers. To this end the City has recommended to Treasury, that the City leave the Detroit Water System and join KWA with Genesee County, Lapeer and Sanilac Counties and the City of Lapeer. We believe this is the most significant long term factor in stabilizing costs to the water customers in the City of Flint.

> ## Recent Tests Show Flint Water within EPA Guidelines
>
> ***Flint, Michigan – February 27, 2015*** – The Michigan Department of Environmental Quality (MDEQ) Testing lab has provided results to the City of Flint showing that test results for TTHM levels for the month of February are well within EPA guidelines for safe water. All eight testing sites showed levels of TTHM ranging between 14.9 and 28.5 micrograms per liter (µg/L), well below the Maximum Contamination Level of 80 (see chart below).

The testing results confirm the progress made by the City to address concerns regarding the safety of its water supply and corroborates findings by the City and independent tests by other organizations that the water today is safe. "Flint's water supply is meeting all safety guidelines set forth by the EPA," said DPW Director Howard Croft. "Today's findings by the MDEQ reinforce the progress we have made, and should help rebuild confidence in the safety of Flint's drinking water. We still have work to do to improve water quality and are committed to being vigilant to assure that water safety is maintained."

These results also show that the four month average for test results is now within EPA guidelines for five of the eight testing areas in the City. However, because EPA regulations require that the four month average for all testing sites be within guidelines, the City of Flint will still be considered to be out of compliance by MDEQ. The City expects to receive notice within the next few weeks indicating non-compliance, and system users can expect to receive official notice of non-compliance in the month of March.

Meanwhile, the City continues to work on maintaining water safety and improving water quality. While steps are being taken daily to improve quality, the City is expecting a formal set of recommendations from its water quality experts within the next few weeks.

The detail of the study results, a report of the progress being made and preliminary recommendations from Veolia will be shared with the newly formed Water Advisory Committee and Water Technical Committee, whose first meetings are scheduled for next week.

Recent Tests Show Flint Water within EPA Guidelines

Flint, Michigan – March 2, 2015 – The Michigan Department of Environmental Quality (MDEQ) Testing lab has provided results to the City of Flint showing that test results for TTHM levels for the month of February are well within EPA guidelines for safe water. All eight testing sites

showed levels of TTHM ranging between 14.9 and 28.5 micrograms per liter (µg/L), well below the Maximum Contamination Level of 80 (see chart attached).

The testing results confirm the progress made by the City to address concerns regarding the safety of its water supply and corroborates findings by the City and independent tests by other organizations that the water today is safe. "Flint's water supply is meeting all safety guidelines set forth by the EPA," said DPW Director Howard Croft. "Today's findings by the MDEQ reinforce the progress we have made, and should help rebuild confidence in the safety of Flint's drinking water. We still have work to do to improve water quality and are committed to being vigilant to assure that water safety is maintained."

These results also show that the four month average for test results is now within EPA guidelines for five of the eight testing areas in the City. It's an on-going issue that has to do with the long term viability of the city's finances. I'm gone but Beth and Harvey are handling. We've got to do something for people in Flint because it's right to do more than it works financially. We've got to work on getting them water they can trust but there is no easy solution. This is a tough one, as everyone's position is correct just not easy.

Good Afternoon, Attorney Randall!

Thank you for returning my call on the other day! Again, my concern as is others in the City of Flint, Michigan regarding the drinking water source for the water customers of the City of Flint. I have enclosed one of the lasted article written by the local newspaper, "The Flint Journal" regarding the Flint River water. Needless to say, the water is dangerous to our health! GM will not use the water at its Engine Plant in Flint to wash engines parts!

We need your help to guide us to the profession people that know about "Bad Drinking Water and Environmental Racism". I truly believe it's "Environmental Racism" at its worst or should I say best! As a resident of flint, Past President of the Flint Branch NAACP, newly elected VP of the Flint Branch NAACP and the most listen to broadcast host during that time on Flint's premiere gospel station, WFLT 1420AM, each Saturday morning from 9:30-10AM, I have challenged our elected officials to step up to the plate and fix this water problem!

I'll be asking the Executive Committee of the Flint Branch of the NAACP to request from our National Office if we can proceed with a possible "Environmental Racism" lawsuit with their assistance and the assistance of other civil rights groups and others to "file briefs in support of our efforts against those parties involved with the changing and the using of the Flint River as our water drinking source.

The City of Flint has Emergency Manager #4 since our "takeover", and cares less about the residents or the water concerns of its Customers of Flint! Please help us with our problem by directing us to the right professional people. Please go to www.actionpa.org/fluoride/ej.html regarding "Environmental Racism" I have attached an article from

the Flint Journal, and may Google other articles regarding the Flint's water source, including how we arrived to where we are on today.

Thank you very much in advance!!

I remain.

From: Muchmore, Dennis (GOV)
Sent: Tuesday, March 03, 2015 7:40 AM
To: Clement, Elizabeth (GOV); Hollins, Harvey (GOV)
Subject: Fwd: Contaminated Drink Water if Flint

I have become increasingly concerned about the situation in Flint and the lack of empathy for the residents. I'm not sure that buying water from Ice Mountain or Bill Young makes sense and I don't know about Meijer since they buy it from Bill or local sources and repackage. But, it would seem to me that buying some and giving it to residents who are having discoloration or smell issues would be fair and prudent until it gets ironed out. Maybe this doesn't make any sense to you and if not just chalk it up to the delirium I'm feeling from the sun and drop the idea.

Harvey feels the situation is slipping out of hand without some direct response and so does Kelly Rossman. She's talking to Beth today. I worry that swooping in may reinforce the idea that there is something wrong with the water after all. But, it seems to me that that would be small issue compared to blowing off these ministers and their concerns. Of course, we can't supply the water forever so maybe working with Wayne something can be figured out.

Subject: Re: Contaminated Drink Water if Flint

PPI probably buys and repackages from Ice Mountain or Absopure (of course it could be from a local source). I just think it is prudent to have a Plan B if it gets out of hand. Seems like that's where some of the ministers could be particularly helpful if they want to be. You, Beth and Harvey are the best thinkers we've got and closest to the situation so your judgment makes sense. Jerry Ambrose has dealt with these kinds of things a zillion times in Lansing with Rev. Stone here so he's had experience. I just don't want it to get away from us so that when it turns warmer they create a crisis.

>>
>> Might want to get Jarrod and Terry Stanton on this as well as Harvey. Otherwise it will get out of hand. It's in the city's long term interest to make the KWA work and we can make the river water safe, but we need to work with the ministers this week to help them out. It's tough for everyday people to listen to financial issues and water mumbo jumbo when all they see is problems. You can't expect the ministers to hold the tide on this problem.
>>
>> How about cutting a deal with Ice Mountain or Bill Young and buying some water for the people for a time? $250K buys a lot of drinking water and we could distribute it through the churches while we continue to make the water even safer.

Subject: Flint

You are trying to work through a potentially difficult situation with Flint water and the local ministers demands (although I frankly tend to have sympathy with them) and you should just be talking about it with the Colonel. Might be good to anticipate what will happen when it gets warm and we have more water problems. I left you with a doozy of a situation and Harvey and Workman/Saxton are really at odds on this one.

Flint water almost like 'gas chambers for Jews,' says Sharpton group activist

Ron Fonger | rfonger1@mlive.com By **Ron Fonger | rfonger1@mlive.com** The Flint Journal on March 03, 2015 at 12:54 PM, updated March 03, 2015 at 2:10 PM

The Rev. Charles Williams II speaks during a press conference for the National Action Network's coordinated response to the Trayvon Martin verdict in this 2013 Flint Journal file photo.Flint Journal file photo

FLINT -- The president of the Michigan chapter of Al Sharpton's National Action Network says Flint water is "almost as bad as gas chambers for Jews."

The Rev. Charles Williams II, speaking at a news conference and water giveaway in Flint on Monday, March 3, made the comment, which **appeared on television station WEYI-TV**.

The city of Flint issued a statement saying officials are "extremely disappointed" by the pastor's remarks, including his comparison of consumption of Flint's water to "genocide."

"We are extremely disappointed in Rev. Charles Williams' comments but certainly understand -- and share -- his frustration," the city statement says. "With that said, we find Rev. Williams' accusations are a gross misrepresentation of the Flint water condition and a wholly inappropriate comparison."

When contacted by The Flint Journal-MLive for comment today, Williams referred a reporter to his Twitter page.

Steven C. Low, executive director of the Flint Jewish Federation, called Williams' comments "an inappropriate invocation of the Holocaust" that "diminishes what survivors went through."

"Drawing such a comparison doesn't shed any light on the water problems," said Low, who called on Williams to apologize for his remarks.

The news conference Williams spoke at is one of several that have been held since Flint **notified customers in January** that the city is in violation of the Safe Drinking Water Act because of the level of total trihalomethanes (TTHM) in water tested during the last 10 months.

Outspoken **residents have since protested** the price, color, odor and overall quality of the water.

City officials have said Flint **water is safe for the vast majority** of the people to drink but warned in January notices that TTHM can pose increased health risks for those with a compromised immune system, the elderly, pregnant women and infants.

Testing during the **last two months has shown the city is meeting** all health and safety standards for water, and a consultant is expected to deliver a report this week, detailing recommendations for improving the quality of drinking water here.

Flint's water problems, including **multiple boil water advisories** last summer, bloomed after the city began using the Flint River as its drinking water source in April.

Prior to that switch, the city had used Lake Huron water, pre-treated and purchased from the city of Detroit.

The Flint statement says "some people may still have issues with discoloration, or do not like the taste of the (higher) mineral content river water (but) these do not amount to a safety issue."

Williams responded to a request for comment with a text message to The Journal, saying "quote my **Twitter feed**."

In a Twitter message, the pastor wrote, "I (hear) #flint city officials upset at my comparisons yesterday. They should use their anger 2 make sure resident aren't drinking death water."

In another message, Williams wrote, "Isn't it extreme to knowingly sell residents contaminated water people in #flint forced to buy liver disease water? What is that? #Genocide."

In addition to his work as president of NAN-Michigan, Williams is the pastor of King Solomon Baptist Church of Detroit.

This week was not Williams' first appearance in the spotlight in Flint.

In 2013, he demanded Hurley Medical Center officials answer charges that they granted a father's request that only white nurses care for his infant child.

The hospital eventually agreed to pay nearly $200,000 in total to three black nurses who sued the hospital after claiming they were discriminated against when they weren't allowed to treat that white baby.

NAN describes itself as one of the leading civil rights organizations in the nation with chapters throughout the United States. The organization was founded in 1991 by Sharpton.

Subject: PRESS RELEASE: Flint Water Improvements

For Immediate Release

City of Flint Announces Action Plan to Maintain Safety and Improve Quality of Flint Water

Flint, Michigan – April 8, 2015 – The City of Flint is proceeding with a series of actions to ensure the continued safety of Flint drinking water is maintained and that issues of discoloration and odor continue to be addressed. Most notably, the installation of a Granulated Active Charcoal filter (GAC) at the Water Treatment Plant is expected to be authorized this week by Emergency Manager Jerry Ambrose.

The introduction of the GAC to the treatment process at Flint's plant will absorb or reduce the chemical precursors which will block or eliminate the formation of TTHM during the filtration process. Engineering and design are underway and installation of the GAC is targeted for completion by mid-July. Cost of this improvement is projected at $1.5 million and will be paid for by the proceeds from the state approved restructuring of the City's Drinking Water Revolving Fund loans.

In addition to the installation of the GAC, the City of Flint is undertaking a number of other improvements to the water system in the coming months, including a water leak detection monitoring, completion of the hydraulic model and subsequent targeted hydrant flushing program, and the replacement of two miles of water main pipe in a critical area of the city. All of these improvements scheduled to occur within the next six months.

"The replacement of this two mile section of pipe along Dupont Street has been identified by a water reliability study as a significant piece of infrastructure and will greatly improve the movement of water in that area of the

city," said Dept. of Public Works Director Howard Croft. Increasing the circulation of the water in the system will immediately result in improvements in water aesthetics, such as discoloration and odor. The MDEQ has given its approval to the project and the process of bidding for construction will begin next week. Construction will take place during the summer of this year.

Ongoing repairs and maintenance also continue to improve the health of the system. To date, about 200 water main breaks have been repaired this year. Whenever major work that may disrupt service is scheduled, the City works to notify residents in the affected area with signage and with posts to cityofflint.com. Updates will include the area of work and the estimated time of completion.

Each main break repair stirs sediments in the line. "Residents should know that there is a chance of discoloration or odor any time work is being done on a main in their area," said Croft. "This is nothing to be alarmed about and it doesn't mean the water is unsafe." If discoloration of water or odor occurs due to repairs, residents are reminded that running the water for a few minutes should clear the line. Anyone with water questions should call 810-787-6537.

The City of Flint remains committed to addressing water related issues. Along with maintaining the safety of the water, addressing quality and affordability are top priorities. The steps outlined above are indicators of the City's progress in addressing the most pressing concerns surrounding water. Emergency Manager Ambrose reiterated that development of a contract with DWSD was not going to happen.

"Those advocating for a return to DWSD do not want to recognize the financial realities of such a move. Not only would such a move increase the City's costs by more than $1million per month, but the water from Detroit is no safer than Flint water, as both entities are measured by the same MDEQ standards that have been in place for years. Why anyone would want to send a million dollars a month to DWSD rather than make necessary repairs to the City's own system is beyond me."

Further updates on the progress being made to improve Flint's water system will released in regular updates to the media and in updates to the City's website, cityofflint.com. Anyone wishing to report an issue can do so under "Online Services". Anyone with questions about these or any other water issues should call the water treatment plant at 810-787-6537.

City of Flint Announces Action Plan to Maintain Safety and Improve Quality of Flint Water

Flint, Michigan – April 8, 2015 – The City of Flint is proceeding with a series of actions to ensure the continued safety of Flint drinking water is maintained and that issues of discoloration and odor continue to be addressed. Most notably, the installation of a Granulated Active Charcoal filter (GAC) at the Water Treatment Plant is expected to be authorized this week by Emergency Manager Jerry Ambrose.

The introduction of the GAC to the treatment process at Flint's plant will absorb or reduce the chemical precursors which will block or eliminate the formation of TTHM during the filtration process. Engineering and design are underway and installation of the GAC is targeted for completion by mid-July. Cost of this improvement is projected at $1.5 million and will be paid for by the proceeds from the state approved restructuring of the City's Drinking Water Revolving Fund loans.

In addition to the installation of the GAC, the City of Flint is undertaking a number of other improvements to the water system in the coming months, including a water leak detection monitoring, completion of the hydraulic model and subsequent targeted hydrant flushing program, and the replacement of two miles of water main pipe in a critical area of the city. All of these improvements scheduled to occur within the next six months.

"The replacement of this two mile section of pipe along Dupont Street has been identified by a water reliability study as a significant piece of infrastructure and will greatly improve

Good afternoon Dennis –

It was great talking with you at the Michigan Policy Conference last week. I am writing to follow up. I am hoping that we can schedule a meeting with the Michigan Health Endowment Fund to discuss the possibilities of the getting a grant to help with the water situation in Flint. At least some subsidy dollars for the very poor that are paying water bills three times higher than the average citizen in this state. I can make myself available to meet in Lansing.

Thank you for your help with this critical issue. I look forward to hearing from you soon.

Enjoy your day!

I'm frustrated by the water issue in Flint. I really don't think people are getting the benefit of the doubt. Now they are concerned and rightfully so about the lead level studies they are receiving from the DEQ samples. Can you take a moment out of your impossible schedule to personally take a look at this? These folks are scared and worried about the health impacts and they are basically getting blown off by us (as a state we're just not sympathizing with their plight).

Next week sometime can Wayne & I have a follow up conversation with you re Flint water? Wayne & I had a call with Brad W. @ DEQ. He is getting back to us re some of the items on your list. So maybe mid-week?
I think the bottom line is Wayne, Brad & I (we would "volunteer") to meet with your minister group here in Lansing [to the extent we can] provide info to some of the issues they raised with you. It may be better that you are not at the meeting. Of course that is your call but maybe let us 'peons' do it. Harvey could be there in your stead; since he knows them. I am sure whatever we convey they probably won't be happy.

Wayne-
We need to have more discussion relating to Flint water. There seem to be even more issues regarding the water than there should be. I'll have a series of questions that I really need some answers to if you can have someone who understands the problems there. The people there just seem to be getting a raw deal from the city particularly in terms of the information they are getting. I know you are as worried about their health as I am so we kind of need to get answers to some of these concerns.

Subject: FW: Need upate on lead / copper tests for Flint

Guys, here's an update and some clarification on the lead situation in Flint. Please limit this information to internal for now.

By the tenants of the federal statute, the city is in compliance for lead and copper. That aside, they have not optimized their water treatment (for the most part, this means adding phosphates to minimize the degree that the water Ph mobilizes lead and copper in people's home plumbing).

Compliance with the standard started with testing. A June-December run of tests (all in homes with lead in their premise plumbing) concluded in December. Another January – June round of sampling concluded last month. Everything checks out in terms of compliance, but now the next step is optimizing the water supply.

So, In about two weeks, DEQ will be sending a formal communication about the optimizing issue. The federal program has long timelines for action. A community water supplier gets 18 months to study the options, and two years thereafter to implement water system optimization measures.

My point: Conceivably, by the time we're halfway through the first timeline, the city will begin using a new water source with KWA … and conceivably, the whole process starts all over again.

In terms of near-future issues, the bottom line is that residents of Flint do not need to worry about lead in their water supply, and DEQ's recent sampling does not indicate an eminent health threat from lead or copper. That said, anyone with lead pipes in their premise plumbing (this translates to tens of thousands of homes in our older urban centers, btw) should at least be aware that they have them, and to some limited degree that's going to impart minute parts per billion of lead in water no matter what. Its why nobody uses lead water pipes anymore.

The long version of this note is below. Let's connect next week. I'd like some thoughts about what more the state could be doing – most immediately, to convey the results of our testing and tell the story to the residents of Flint in an effort to quell some fears.
Thanks!
b

Subject: RE: Need upate on lead / copper tests for Flint

Brad,

As we discussed, the City has completed the last round of monitoring (Jan 1 – June 30, 2015). The last samples came in about a week ago. We have made the compliance determination that the 90th percentile level is 11 parts per billion, which is below the Action Level Standard of 15 parts per billion (there is no Lead maximum contaminant level standard). The federal rule requires measuring lead levels in water from household plumbing materials to determine the corrosivity of the City's water in order to limit exposure.

I have provided a summary of Flint's lead compliance monitoring from the last 20+ years since this regulation started in 1991. The City of Flint itself has never had a 90th percentile level exceed the 15 part per billion action level. Sampling requirements look at the worst case plumbing materials. Samples must be collected in accordance with the regulatory requirements and criteria in order to be used for compliance determinations.

Because the City of Flint serves a population of over 50,000 they are required to have Fully Optimized Corrosion Control. While it is possible to meet the fully optimized requirement without additional treatment, based on their two rounds of sampling since switching to the Flint River, we have determined they did not meet the eligibility for this per the regulation. They now have to complete a study (within 18 months) and are then allowed a period of additional time (2 additional years) to install the selected treatment for Fully Optimized Corrosion Control in accordance with the regulatory requirements. This is what DWSD was required to do back in 1993 – 1997 (see attached letter and study). We are planning to suggest the City directly submit a treatment process to shorten the timeline to achieve full optimization. This letter is currently being drafted but won't be ready to mail out for another week.

Liane and I had a conference call with EPA region V in Chicago on Tuesday to go over all of this and they are in support of these next steps with the City.

The matter will be potentially further complicated when the City switches over to water from the Karegnondi Water Authority next year to re-evaluate the continuing requirement to fully optimize corrosion control.

The DEQ recognizes that there is has been no level of lead exposure determined to be safe, but again the regulation was developed to optimize water corrosivity to limit exposure and the City is following the regulatory requirements.

Lead is not coming from the Flint River or the City's Water Treatment Plant or the public distribution system. It is from lead service lines into homes and from plumbing materials and fixtures within the private property of the household.

As watermains are replaced within the City lead services associated with that section of watermain would be replaced in order to reconnect to City water. This would also place burden on the homeowner to pay for having the service line re-plumbed. However, since 2000 only 16 miles of the City's 500 miles of watermain have been replaced as they did not have the financial means to do so.

Let us know if there are questions or you need any additional information.

Guys, the Flint Ministers met with the Governor's office again last week. They also brought along some folks from the community – a college prof and a GM engineer – who imparted that 80 water tests in Flint have shown high lead levels.

Could use an upate on the January / june testing results, as well as recap of the December testing numbers, and any overview you can offer to edify this conversation.
Call me or email today if possible. Thanks!

Subject: RE: Updated Memo on Water Coalition Questions - July 29

I think this information is very helpful. It will not answer the main question about the quality of the water (DEQ is working on that through Brad I believe), and the color and smell of the present water, but it does get us to the answers to the less subjective issues. Frankly, the only way the issues will be totally resolved is when the KWA comes on line and the water is perceived to be cleaner and healthier.
I am somewhat surprised that the leadership in Flint has not responded better to the community questions, which don't seem unreasonable at all. Seems like Harvey has a better network into some of the neighborhoods than the city does. The KWA PR department definitely needs to do some outreach or they're headed down the same road as DWSD. Do you know if they go out on a regular basis to the community and talk about the rates, costs, etc.?

STATE OF MICHIGAN
DEPARTMENT OF TREASURY
LANSING

RICK SNYDER
GOVERNOR

NICK A. KHOURI
STATE TREASURER

TO: Randall Byrne, State Administrative Manager; Office of Fiscal Responsibility

FROM: Eric Cline, Department Manager; Office of Fiscal Responsibility

SUBJECT: Questions Regarding City of Flint Water System

DATE: July 28, 2015

At a July 23, 2015 meeting, Deputy Treasurer Workman posed several questions regarding the City of Flint's water system. This memo is a response to those questions.

The annual cost to the City of Flint to reconnect to the DWSD system

In a March 3, 2015 memo to Deputy Treasurer Workman, Emergency Manager Ambrose noted that he had been informed by DWSD that such a reconnection would immediately levy a fixed cost on the City of $10.1-million per year.

Actual water purchases would be in addition to the fixed cost fee and would be dependent upon actual usage, but the annual cost was estimated to be as high as $1-million/month; making the entire total of a one year connection back to DWSD as high as $22-million. This cost would be reduced to approximately $19-million/year once the City's $3-million annual expense of operating the water system itself was offset.

These calculations were outlined in a March 2015 memo from the Emergency Manager to Deputy Treasurer Workman and update cost projections provided in a February 11, 2015 memo to Chief Deputy Treasurer Tom Saxton.

The Emergency Manager also stated his concern that for the City to be able to pay these costs that water rates charged to Flint residents would need to be increased by a minimum of 30%. Water rate increases between 2010 and 2015 are illustrated in the table attached.

In addition, DWSD was requiring that the City of Flint negotiate a 30-year contract for the provision of back-up services.

The City of Flint's degree of participation in the management of the KWA system

Mayor Dayne Walling is the City's official representative to the Karegnondi Water Authority (KWA). The participation of the Mayor as the official representative for the City of Flint is established in the KWA Articles of Incorporation. Mayor Walling is the current Chair of the Board of the KWA Board of Directors.

Continued use of Flint River water after the City is connected to the KWA system

The City Administrator has confirmed that once the City is fully connected to the KWA system they will no longer continue to use Flint River water.

The Flint River, however, will be the City's primary back-up water source in the event that a major disruption in the KWA system temporarily prevents the City from receiving water.

The process used to hire Veolia

Veolia responded on January 29, 2015, to a Request for Proposal issued by the City of Flint. Emergency Manager Ambrose made the final decision to retain Veolia.

The importance of hydrant flushing

Fire hydrant flushing is an important part of distribution system maintenance. It is useful in determining flow conditions in water mains.

According to information from the American Water Works Association (AWWA), there are two types of hydrant flushing utilized. The most comprehensive method is fire-flow testing.

Fire-flow testing requires hydrants to be opened, flushed, pressure and flow data to be collected and the potential fire flow at a particular point in a water main to be determined.

Hydrant flushing permits any debris to be cleared from a water main. They process of collecting fire flow data allows the determination of water pressure and flow capabilities for fighting fires at any location within a distribution system. It can also help determine the general condition of a system by detecting reduced water flows in a given area.

Status of the GAC carbon filter installation

Six of the twelve filters will be operational by no later than the first week of August.

Activation of the filters is expected to immediately drop the levels of TTHM within the system.

The remaining six filters are projected to be installed and operational by the end of August.

Status of the DuPont Street Water Main Replacement

After an internal review, the City made the decision to rebid this project.

There were multiple reasons for this decision, which included interference with current road projects, the determination that project bids were too high, and bidding timelines which were not favorable to secure quality bids or contractors.

This project will be rebid by the City later this fiscal year.

If you have any questions or need additional information on this topic, let me know. Thank you.

Cc: Clayton, Stacie (GOV); Clement, Elizabeth (GOV)
Subject: Re: Water Filter

Harvey-
Treasury gave us the financial info and KWA info the ministers wanted last week and Tom and Wayne are coming to the meeting. Brad has the test results and the science guy to explain the lead issue and you have the filters (I'd keep that to yourself and bring one to the meeting so you can be a hero). Frankly, I don't see what else we can do. They aren't paying more, the water is ok, and KWA is the long term answer. If they don't like the Mayor, the primary is Tuesday and we really can't get involved in that.

Mark,
Thank you. We will work with Stacie to identify the appropriate entity to receive the filters for Flint residents. In addition, we'll keep you out the public eye on this.

Please know, however, how much we appreciate Meijer and most importantly you for doing this.

Best,
Harvey

> We are all set. Stacie Behler can serve as liaison on this one. The merchant team can source 1,500 filters. We will get them to the community at cost. My guess is this will be $20k or so, but the team will give you a final number.
>
> Because we don't want to be a state vendor, we won't sell them to you. Stacie will work out logistics of whether we make a donation of gift cards to the state that you use to purchase them,

or whether there is some other entity to which we can give them.

Given all the circumstances, we are not interested in any publicity. We want it to be clear that the state is providing these, not Meijer.

Thanks for reaching out.

Mark

Subject: Water Filter

Mark,

Per our last conversation, I expressed that we were interested acquiring and distributing 1500 water filters to Flint residents to assist with the quality (perceived or real) of their drinking water until the KWA pipeline comes online.

A few weeks ago, you asked me to send you the product ID number so you could check with your suppliers regarding price. I apologize for taking long to send you product ID; a number of conversations needed to occur in Flint

before we could proceed.

The product ID for a Brita Filter for kitchen faucets is:

Product ID 3176421

UPC 7-23987-0078

Thank you for taking the time to look into this.

Best,

Harvey Hollins III, Director

Subject: RE: Director's Office Assignment -- Flint - need update asap

I apologize for the delay in responding more specifically to this assignment, it took some time to review our Childhood Lead Poisoning Prevention program data to see if it might contribute to the understanding of the situation in Flint with their water supply. Here is what we found:

We looked at lead testing results for May 2014-April 2015, which is the 12 month time frame just after Flint started drawing their water from the river (water source changed in April 2014).

We compared lead testing rates and lead testing results to the same time frame for the previous 3 years, to see if there were any patterns that suggested that there were increased rates of lead poisoning after the water supply was switched. Per the attached charts –

- Lead testing rates remained about the same from year to year (chart on the right).
- There was a spike in elevated blood lead tests from July-September 2014 (chart on the left, gold line).
- However that pattern was not terribly different from what we saw in the previous three years, especially in 2011-2012 (we are working with our Epidemiologist to statistically verify any significant differences).

- We commonly see a 'seasonal effect' with lead, related to people opening and closing windows more often in the summer, which disturbs old deteriorating paint on the windows, sills and sashes. Window fans frequently blow and spread the lead dust from the deteriorating paint to other parts of the room/house. We suspect that the summer data spike may be related to this effect.
- If the home water supply lines and/or river water were contributing to elevated blood lead tests, we expected that the increased rates would extend beyond the summer, but they drop quite a bit from September to October, stayed low over the winter, and are just starting to tail up again in the spring of 2015.

So upon review, we don't believe our data demonstrates an increase in lead poisoning rates that might be attributable to the change in water source for Flint. We recognize that lead exposure via the water is only a small piece of what may be happening for families in Flint, however, we hope the information is helpful.

Subject: RE: Updated Memo on Water Coalition Questions - July 29

I think this information is very helpful. It will not answer the main question about the quality of the water (DEQ is working on that through Brad I believe), and the color and smell of the present water, but it does get us to the answers to the less subjective issues. Frankly, the only way the issues will be totally resolved is when the KWA comes on line and the water is perceived to be cleaner and healthier.
I am somewhat surprised that the leadership in Flint has not responded better to the community questions, which don't seem unreasonable at all. Seems like Harvey has a better network into some of the neighborhoods than the city does. The KWA PR department definitely needs to do some outreach or they're headed down the same road as DWSD. Do you know if they go out on a regular basis to the community and talk about the rates, costs, etc.?

That AP brief came from this Flint Journal story:
http://www.mlive.com/news/flint/index.ssf/2015/08/concerned_pastors_urge_flint_r.html#incart_river

Here's one that showcases the local clergy. I presume most of these folks will be with us tomorrow?
http://www.mlive.com/news/flint/index.ssf/2015/06/judge_says_flint_doesnt_have_t_1.html#incart_related_stories

Just had a pre-meet with Stephen Busch, our drinking water expert who oversees the staff regulating Flint. He's planning to bring some information on the history of the water / lead issue in Flint, as well as some data about the most recent statutorily required testing. He'll be able to discuss the state program (which implements the federal statute), what we've been doing by way of testing, what we're finding, and what residents should do if they have concerns.

Anything else anyone wants us to be prepared for?
b

Yep, that's them. They haven't been too bad in private. I think they're just frustrated with the city and they aren't happy with the EM in the first place. We're working with them to get their complaints mostly spoken to, but the brown water makes it tough for them to get to home plate.

That AP brief came from this Flint Journal story:
http://www.mlive.com/news/flint/index.ssf/2015/08/concerned_pastors_urge_flint_r.html#incart_river

Here's one that showcases the local clergy. I presume most of these folks will be with us tomorrow?
http://www.mlive.com/news/flint/index.ssf/2015/06/judge_says_flint_doesnt_have_t_1.html#incart_related_stories

Just had a pre-meet with Stephen Busch, our drinking water expert who oversees the staff regulating Flint. He's planning to bring some information on the history of the water / lead issue in Flint, as well as some data about the most recent statutorily required testing. He'll be able to discuss the state program (which implements the federal statute), what we've been doing by way of testing, what we're finding, and what residents should do if they have concerns.

Anything else anyone wants us to be prepared for?
b

Subject: RE: '20150804_Meeting with Flint's Clean Water Coalition'

I didn't think that meeting was as useful as others. If people won't accept the factual information, I'm not sure there is much we can do about it. They're getting their own filters, we've installed six at the main and I thought there were six more coming. As for the flushing, that's part of any city's water system, and people in every community pay for it. As to the frequency, there must be a plan to reduce the number of times.

Questions:
Why does KWA only produce 18 million gals? Doesn't make sense to have a system that doesn't produce enough water. Where do they expect to get the other from? Especially since GM doesn't want the Flint river water (even though presumably GM has been both the biggest commercial user and disposer), how do they separate out the flow?

We can't do too many more of these. The three activists in the room just want to be right, they don't want answers. No matter what we say they'll always want something else to be the answer. The Pastors and the woman form yesterday who usually sits across from me and who always lectures us (that's just a reminder of some of the old time negative racial experiences she's had and I get it) are really a strong group of people. Usually there is a black woman who comes with them, but I missed her yesterday. I really her and of course, Overton and Hill are pretty impressive people in their own right.

SUBJECT: Karegnondi Water Authority
Fact Sheets

Gentlemen,

Find enclosed 3 items as promised at our meeting of August 26, 2015.

1. Original Fact Sheet
   DWSD vs. KWA: 5/1/12

2. KWA Fact Sheet: 9/1/15

3. DWSD Cost of Water

Should you have any questions, do not hesitate to contact me directly at 810-287-1925.

VIA EMAIL: [redacted]

Fact Sheet
City of Flint
DWSD versus KWA

Issue: City of Flint joining Karegnondi Water Authority and leaving City of Detroit water system

Fact: Both the City of Flint and City of Detroit operate their water system via enterprise funds. The water fund does not impact either community's general fund. Leaving the water system will not impact the general fund.

Fact: The City of Flint is a suburban customer of Detroit. If Flint leaves, it only impacts the suburban customer rate, not Detroit's.

Fact: Detroit's own plan calls for (latest available estimate) $1.2 billion dollar improvements to supply redundancy to Flint. If Flint leaves, Detroit avoids this construction cost.

Fact: Detroit and DWSD have experienced bond rating decreases in recent months. If Flint leaves, DWSD avoids a new bond issue and eliminates a capital project from its master plan improving its financial outlook.

Fact: Delivering water to Flint from DWSD is expensive. If Flint leaves, DWSD can reduce its operating and maintenance costs to its contracted customers.

Fact: DWSD has a limited capacity for water treatment and delivery. If Flint leaves, the City can resell that volume to other customers.

Fact: DWSD has multiple drinking water treatment plants. Some are more expensive to operate and maintain than others. Without a commitment to Flint, its largest customer other than the City of Detroit, DWSD may choose to discontinue operation of one or more of its current facilities and realize significant cost reductions to the overall system.

Fact: Flint is not part of the DWSD sewer system. The City of Flint leaving has no impact on the sewer system.

Fact: The creation of the KWA system will create over 1,000 construction jobs in Michigan. Design and construction of the system will take 42 months from July 2012 through December 2015.

Fact: KWA is offering a fixed rate for capital to its customers. Flint joining KWA will give the City a stable rate for upwards of 20 years.

Fact: KWA will offer raw water to the region. Raw water is not enhanced with chemicals, which is undesirable to agribusiness.

Fact: The I-69 corridor/I-75 corridor crosses in Flint. Along with CN and CSX and the pipeline aerotropolis, Flint can be a major transportation center for agribusiness. KWA can provide two products for agribusiness: potable and process (raw) water, and wastewater treatment facilities.

Fact: DWSD does not serve the Thumb region. KWA with its partners will be able to serve both the population with its basic needs: drinking water and the businesses with large quantities of process (raw) water.

Fact: DWSD is the only water supplier for over 4 million residents of the state. The creation of the KWA will create a second water supply system thereby reducing the impact of terrorist attacks on water supplies. With a mutual aid agreement between DWSD and KWA, the system could complement each other.

Fact: DWSD does not provide water supply to major portions of the KWA service area. KWA will provide local municipalities in the thumb region with an alternative water supply to the Arsenic impacted well systems.

In addition, local communities can replace groundwater systems with KWA surface water system and thereby improve local groundwater levels.

The KWA system will provide fire protection service to regions currently not served.

Fact: The current DWSD water system has over 20% water loss in its system. KWA's water supply is expected to have less than a 5% water loss. KWA will provide a more effective use of the waters of the state.

Fact: KWA provides redundant water supply to Flint. Currently, DWSD only provides a single source to Flint. KWA provides multiple supply sources to Flint at a fraction of the cost.

Fact: KWA has offered to purchase excess infrastructure from DWSD. If Flint leaves, Detroit has 25 miles of watermain it no longer needs. KWA has offered to purchase the pipeline and enter into a long-term arrangement for purchase of water from DWSD.

Fact: Each incorporating municipality in KWA will pay the same rate for raw water; therefore, each community will set its own treatment standards and exert local control of the cost of water it provides to its citizens.

Fact: Lapeer and Sanilac Counties are facing depletion of their groundwater supplies.

Karegnondi Water Authority (KWA) Fact Sheet

- KWA is incorporated by the State of Michigan, comprised of the City of Flint, City of Lapeer, Genesee County, Lapeer County, and Sanilac County.

- As specified in its Articles of Incorporation, each of these constituent municipalities has one representative to the board – specifically the Mayors or their designees of the 2 cities (Flint and Lapeer), the Drain Commissioners or their designees from each of the counties (Sanilac, Lapeer, and Genesee).

- KWA will deliver raw water to customer utilities.

- Each governmental unit will still own and operate their respective treatment and distribution systems. GCDC will have no jurisdiction over the City of Flint water. Flint will have all franchise rights for sale and treatment of water from KWA within the City of Flint.

- Each community that obligates itself to the debt for construction of the KWA infrastructure pipeline, intake and pump stations, receives commensurate voting membership to the board.

- Flint's debt obligation is based on the volume as selected by the city.

- Additional members are appointed by their respective communities.

- All board members serve without compensation.

- KWA will operate with 5 to 7 full-time equivalent employees. KWA will contract its labor force.

- To date, only the City of Flint and Genesee County have bought capacity in the project.

- Once KWA water is available, each community receiving untreated Lake Huron water from KWA will pay a share of the operating costs, i.e.: electricity, labor, maintenance, and chemicals in proportion to the volume of water they receive.

- KWA has created a capacity of 60 million gallons per day (mg).

- Flint has purchased 18.0 mgd. Genesee County has purchased 42 mgd. Each purchaser pays based on their purchased capacity. The total project cost will be divided by 60 (total capacity) and each purchaser, Flint and Genesee, will pay the same price per unit.

- The operation and maintenance cost will also be charged based upon the volume purchased annually.

- If a community exceeds capacity, it must either purchase or rent capacity from a community with excess.

- There exists a 30 day rolling average, which will determine if any community exceeds purchased capacity. Water volume purchased for capacity purposes will be calculated on the basis of a 30-day average.

- Capital costs for Flint will be a flat rate of approximately $6.8 million over 30 years.

- To date, KWA is below its construction cost projection of $274 million.

- 90 percent of the KWA pipeline route is constructed along public right of ways.

- Any land required, that was outside the road right-of-way, was purchased from the original land owners, not a 3rd party short-term owner.

- All KWA construction contracts have been publically and competitively bid.

- No tax dollars, (Federal, State, or Local) are being used to fund this project. All project costs for KWA are being paid by the Flint and Genesee County water users.

Mayor Dayne Walling to Visit Washington, D.C. to Join President and First Lady Obama for White House Welcome of Pope Francis

Flint, Michigan – September 18, 2015–Flint Mayor Dayne Walling will be travelling to our nation's capital to join a White House delegation welcoming Pope Francis to the White House during his trip to the United States. Pope Francis will arrive in Washington, D.C. on September 22 and will be greeted the following day during a ceremony hosted by President and First Lady Obama on the White House's South Lawn. Mayor Walling will be joined by City Attorney Pete Bade to represent Flint in a welcome delegation of officials and leaders from around the country.

"As a person of deep Christian faith and strong patriotism, there is no place in the world I would rather be that day than on the South Lawn of the White House with the President and First Lady to welcome the Pope. I am honored to be able to attend this once in a lifetime experience and represent our great City of Flint," said Walling. The Mayor is a long time, active member of the Court Street Methodist Church.

City Attorney Pete Bade, who will be the Mayor's guest to the ceremony, is a devout Catholic and a member of St. John Vianney Catholic Church in Flint. Bade says he feels honored and blessed to join Mayor Walling for this historic visit. "In the past two and half years, Pope Francis has captured the world's attention with his humility and constant message of compassion for the poor," said Bade.

The welcome ceremony for the Pope is the primary focus of the Mayor's trip to D.C., but while there he will also be meeting with federal representatives to discuss matters important to the City of Flint. Additional information on the Mayor's schedule during his trip will be made available on Monday, September 21. The Mayor and City Attorney's visit to Washington, D.C. is being paid for by each of them personally and will not cost the City of Flint in any way.

Mayor Walling will be joined by City Attorney Pete Bade to represent Flint in a welcome delegation of officials and leaders from around the country.
>>
>> "As a person of deep Christian faith and strong patriotism, there is no place in the world I would rather be that day than on the South Lawn of the White House with the President and First Lady to welcome the Pope. I am honored to be able to attend this once in a lifetime experience and represent our great City of Flint," said Walling. The Mayor is a long time, active member of the Court Street Methodist Church.
>>
>> City Attorney Pete Bade, who will be the Mayor's guest to the ceremony, is a devout Catholic and a member of St. John Vianney Catholic Church in Flint. Bade says he feels honored and blessed to join Mayor Walling for this historic visit. "In the past two and half years, Pope Francis has captured the world's attention with his humility and constant message of compassion for the poor," said Bade.
>>
>> The welcome ceremony for the Pope is the primary focus of the Mayor's trip to D.C., but while there he will also be meeting with federal representatives to discuss matters important to the City of Flint. Additional information on the Mayor's schedule during his trip will be made available on Monday, September 21. The Mayor and City Attorney's visit to Washington, D.C. is being paid for by each of them personally and will not cost the City of Flint in any way.

Flint City Council approves resolution to buy water from Karegnondi, state approval still needed
By Dominic Adams | dadams5@mlive.com
on March 25, 2013 at 10:45 PM, updated March 26, 2013 at 1:28 AM

FLINT, MI – Flint is one step closer to getting its water from Lake Huron as part of the Karegnondi Water Authority.

The vote, approved 7-1 at the Flint City Council meeting Monday, March 25, may have set in motion the end to Flint paying to get its water from Detroit.

Under the proposal, Flint would get 16 million gallons per day of raw water from Lake Huron, pipe it to Flint for treatment and then sell it to customers throughout the city. Another 2 million gallons per day would come from the Flint River and will be treated in Flint.

Mayor Dayne Walling said the Department of Environmental Quality must approve Flint's getting 2 million gallons per day from the Flint River.

Tuesday's meeting followed weeks of discussions and special meetings surrounding the resolution.

"We got there," Councilman Joshua Freeman said. "That's the important thing."

There were more than 50 people at Monday's meeting.

"Going with Karegnondi is the best decision. We have no opinion on the economics of the decision," said Rebecca Fedewa, Flint River Watershed Coalition executive director. "If we start drawing water out of the Flint River, we are at risk of having to start releasing water from our reservoirs."

Genesee County Drain Commissioner Jeff Wright said the decision must still be approved by a county water and waste advisory board. The KWA board will then be reconvened for final approval.

Wright said construction could start in May.

State treasury officials still must approve the city council's move because Flint has an emergency financial manager. All expenditures over $50,000 must be approved.

Genesee County Drain Commissioner Jeff Wright has said that Flint would pay roughly $6.4 million annually for water service if it joined the pipeline – a nearly $4 million savings on what it pays Detroit for water.

Walling previously said the city would save $19 million over eight years by getting water from the KWA.

"It's a historic night in the City of Flint," Walling said. "The savings will be less with the capacity level approved by city council because there will be increased treatment cost for the river water."

He said the DEQ told the city it needed to get 18 million gallons per day or there would have to be additional work done at Flint's water plant.

Flint's water plant and the Flint River is currently the backup for Flint and Genesee County, however, the plant only operates four times per year.

Councilman Bryant Nolden was the lone dissenting vote.
"It was a protest vote," Nolden said. "I knew they had enough votes. I just feel like the Flint River is our best option."
Karengnondi is the regional water authority that includes Genesee, Lapeer and Sanilac counties and the cities of Flint and Lapeer.
Flint is the second municipality, behind Genesee County, to officially decide to purchase raw water through the KWA. Lapeer city officials said they intend to purchase water, but an agreement has been finalized.

ABC12 Investigates: What's in your water?

Posted: Jan 29, 2015 3:38 PM EST
Updated: Jan 29, 2015 11:54 PM EST

By Larry Elliott CONNECT

FLINT (WJRT) - (01/29/15) - The results are in and we now have a completely independent look at what's in Flint's water supply.

For months, since Flint switched from a Detroit water supply to the Flint River as it's water source, Flint water customers have complained of smelly, cloudy, bad tasting water and blame it for a variety of health problems.

Complaints exploded earlier this month when Flint notified its water customers that a group of chemicals known as TTHM were at much higher average levels than allowed by law.

With so many questions and distrust of the answers, ABC12's Larry Elliott investigates - What's in your Water?

It seems no matter who you ask in the Flint area, there's an opinion about the city's water. Most of the issues center on the quality of the water and whether it's safe to drink.

"Right now it smells," said Flint resident Lee Miller. "We're getting water out of our own back yard now and it's costing me double what it was coming from Detroit."

"It has a funny taste to it," said Flint resident Milton Alexander.

"It could be dangerous to us, actually I don't know how dangerous it is," said Flint resident Shanika Sanders.

"I'm no cheerleader for the water department here, I think we've got a lot of issues to work on," Ken VanWagoner, of Good Beans Cafe - Flint.

Most of the issues center on the quality of the water and whether it's safe to drink, but concern over its safety reached a new high earlier this month when the city was required by the state Department of Environmental Quality to notify residents that the water had exceeded the allowable limit of a group of chemicals known as TTHM.

TTHM is in most municipal water systems and is thought by some to be a possible carcinogen in long term exposure.

It's a byproduct of chlorination, which is commonly used to help purify water. Last August, as Flint's water treatment plant worked to purify the water it was drawing from the Flint River, levels of TTHM grew to well over the EPA allowed maximum.

August test results provided by the DEQ to ABC12 show all of the eight testing sites around Flint had TTHM levels well above the legal limit.

The lowest level among the eight sites was 40 percent above the legal limit. The highest was 145 percent

more than allowed.

DEQ rules only require the city to report higher than allowed levels to the public once a year, and only if the average of quarterly tests is higher than the legal limit.

That notification went out to residents on Jan. 5. Since then, many residents have refused to believe assurances from the DEQ and the city that the water is now safe to drink.

So, we set out to do complete and independent testing to find out for ourselves exactly what's in your water.

It took a bit of research, but we finally found Water Tech, in Howell, a testing lab with absolutely no ties to Flint, just to make sure there are no questions about the test results.

After having Water Tech train ABC12's Larry Elliott on the proper methods for collecting water samples, we set out last week to randomly test five sites in Flint.

1. Downtown.

"I'm excited to see this done because this is an independent way to find out that everything's just fine," VanWagoner said.

2. The north side.

"We'd like to do kind of a whole battery of tests of your water. Oh yeah," Alexander said.

3. The west side.

"It could be dangerous to us. How about if we help you find out what's in it right now?" Sanders said.

4. The east side.

"I'm hoping for a good test and put my family at ease," Miller said.

5. Our main studio, on the south side.

We also wanted to compare whatever we're to find with Detroit supplied water, so we took a sample from the Burton water system.

Since next year Flint will connect to the new KWA pipeline, getting its water from Lake Huron, we took a comparison sample from the Saginaw-Midland water system, which currently uses Lake Huron water.

We tested all the sites for levels of TTHM. We also tested how much residual chlorine was in the Flint and Burton water supply and more importantly, we tested at two of our Flint sites for a number of other hazardous chemicals that could cause skin or other health problems.

Tests for those other chemicals are not required for public water systems, but we decided to run those tests anyway.

Here's what our independent testing shows:

All sites tested, including the Saginaw-Midland water system and the Burton system, using Detroit water, contained TTHM - but all of them were well below the EPA allowed maximum.

Saginaw-Midland water had less than a third of the maximum TTHM allowed, the Burton system had only about 25 percent of the maximum and the highest level found of all of our Flint tests showed just over 65 percent of what's allowed, all below EPA limits.

A similar byproduct of chlorination, haloacetic acids, was also well below EPA maximums in Flint's water.

We tested Flint's north and east water samples for many other hazardous chemicals that a doctor told us could cause skin or other health problems, and on both tests, not a single one of those chemicals was detected.

Since most often any smell to the water would be caused by levels of total residual chlorine, we tested that too, in both our Flint and Burton samples.

The legal limit is 4 milligrams per liter. The average of our Flint samples shows a level of about a half milligram per liter. Our test in Burton actually shows 22 percent more residual chlorine than Flint.

Our Flint sample also showed no Coliform bacteria.

We asked Chris McCarthy, of Water Tech, a few questions.

Q: How would you describe these test results?

A: "Well, for the samples received, the tests we performed, everything is within EPA guidelines for safe drinking water."

Q: Is there anything in these results that raises a red flag for you?

A: "For water quality or water safety, No."

We then asked residents if these results change their opinion of what they'll do with their water now.

"To be honest, no," Alexander said.

"It will make me feel a lot more comfortable about bathing and brushing my teeth in it, but I'm still not going to drink it and I'm not gonna give it to my kids or my dog," Sanders said.

"It makes me feel a lot more safer, a lot more comfortable knowing that it's safe to drink now, you know. I'll tell you a load lifted off my shoulders. When the kids take baths, when my wife takes a shower, you know, I know now we're safe," Miller said.

So what about those who've stood before Flint City Council with jugs of discolored water?

While Genesee County Drain Commissioner Jeff Wright points out he has no jurisdiction over Flint's water system, he says in general, discolored water like this is nearly always the result of water main breaks or repairs, and Flint has more than its share because of its aging system.

Wright also says the KWA pipeline won't change that. It will take better management of repairs and money - lots of it - to replace Flint's aging water mains.

Unfortunately for the city of Flint, those very high levels of TTHM recorded last August in Flint water tests are still required by the DEQ to be included in the next report calculating average TTHM levels.

The next test will be done next week, and city Public Works Director Howard Croft tells ABC12, because of the high levels last August, the city will again be found in violation and will be required by the DEQ to send out another TTHM notice of violation to all Flint water customers in early March, even if all new tests show levels under the legal limit.

Subject: RE: follow up

City's usage is 14 MGD/Day

Timeline is 9 months until June 2016

Fixed Cost is $662,100 for 9 months or $5,958,900

Commodity Rate is $501,383/month

Total Monthly Cost is $1,163,483

Cost until June 2016 is $10,471,347

The City does not know the cost to move the water plant into stand-by mode. However, they have indicated that there might be some reduced costs as lower chemical costs will be incurred.

I think that Bob Daddow, Rich Baird and Mike Duggan have something to do with the more "reasonable" approach. The Mayor in particular is very concerned about the issues of a fellow community and Daddow is perhaps the finest public administrator in the state. So, their involvement and Rich's management skills are powerful forces.

To: Saxton, Thomas (Treasury); Koryzno, Edward (Treasury); Byrne, Randall (Treasury)
Subject: RE: follow up

City's usage is 14 MGD/Day

Timeline is 9 months until June 2016

Fixed Cost is $662,100 for 9 months or $5,958,900

Commodity Rate is $501,383/month

Total Monthly Cost is $1,163,483

Cost until June 2016 is $10,471,347

The City does not know the cost to move the water plant into stand-by mode. However, they have indicated that there might be some reduced costs as lower chemical costs will be incurred.

Subject: RE: letter from John O'Brien

I agree with Dennis… Consistent with what I think we (Wayne & I) said at the DEQ meeting yesterday… the county drain commission has more knowledge & experience running a water system than we (Treasury) do. That is why we were trying to get some outside verification. We were not able to get an outside engineering firm engaged due to the timeframe. Our fallback was Jeff Wright – the drain commissioner. He calculated $13.2mm. We did a 'back of the envelope' analysis of $10.5mm late last week. That was based off an email we rec'd from Dennis that summarized the DWSD/City proposal. We were not a part of the $12mm calculation that is in the 'public' realm now. I believe that was a result of a meeting DEQ/Dan had with the City earlier this week.
John indicated yesterday he would recommend/prefer to err on the side of caution for the amount requested from the legislature. Plus, keep in mind whatever number you choose assumes completion of KWA in June. If the project slips a month (& it very well could given it is a major capital project) the cost of the reconnect is going to go up a $1mm+ per month.
If it is possible I would recommend using the $13.2mm (hoping the project will be done as scheduled) given the county is in the best position to make that estimate. We don't have any info that would contradict that number.

Here is the letter from the Genesee Co Drain Commission. My interpretation of the contents would be their estimate is $13.2mm (vs the $12mm discussed this morning).

They included their contract with the City. Sec 5.7 references prevailing rates the City would be charged; that is different than the rates reflected in the $13.2mm. So that contract may need to be modified.

They also raise some other items (under *Procedure to Activate Supply* – p.3) that may have cost implications.

Not much more than what's in the news. I made a couple of

- City Council voted to approve their $2 million to use GLWA
- People are still upset, believing that DEQ is covering up their mistake.
- Most elected officials are pointing fingers at the state.
- Bottled water delivery has slowed a tad.
- Various groups are still delivering water filters, a big filter distribution occurred over the weekend.
- Mayor Walling and his challenger Weaver are debating tonight.

Subject: PRESS RELEASE: RTAB Approves Resolution for the Use of $2 Million in Fund Balance to Reconnect to Detroit Water

For Immediate Release

RTAB Approves Resolution for the Use of $2 Million in Fund Balance to Reconnect to Detroit Water

Flint, Michigan – October 14, 2015 – The City of Flint's Receivership Transition Advisory Board has today approved a resolution that directs $2 Million in fund balance from the Water and Sewer funds be used to fund Flint's portion of the reconnection to Detroit as the City's water source. The Board voted unanimously to approve the measure which will compliment commitments by Governor Snyder in the amount of $6 million and the Charles Stewart Mott Foundation in the amount of $4 million, respectively, for a total reconnection cost of $12 million.

"Flint is one step closer to switching back to Detroit water with the board's approval," said Mayor Dayne Walling. "Now we need approval from the state treasurer and support from the state legislature and I urge them to act immediately." Approval from the legislature is required to finalize the negotiations with the Great Lakes Water Authority, formerly Detroit Water and Sewerage (DWSD). Once the contract between the Authority, Genesse County and the City are complete, Flint can once again begin receiving treated Lake Huron water from Detroit.

RTAB Approves Resolution for the Use of $2 Million in Fund Balance to Reconnect to Detroit Water

Flint, Michigan – October 14, 2015 – The City of Flint's Receivership Transition Advisory Board has today approved a resolution that directs $2 Million in fund balance from the Water and Sewer funds be used to fund Flint's portion of the reconnection to Detroit as the City's water source. The Board voted unanimously to approve the measure which will compliment commitments by Governor Snyder in the amount of $6 million and the Charles Stewart Mott Foundation in the amount of $4 million, respectively, for a total reconnection cost of $12 million.

"Flint is one step closer to switching back to Detroit water with the board's approval," said Mayor Dayne Walling. "Now we need approval from the state treasurer and support from the state legislature and I urge them to act immediately." Approval from the legislature is required to finalize the negotiations with the Great Lakes Water Authority, formerly Detroit Water and Sewerage (DWSD). Once the contract between the Authority, Genesse County and the City are complete, Flint can once again begin receiving treated Lake Huron water from Detroit.

For Immediate Release

City of Flint Reconnects to Detroit Water

Flint, Michigan – October 16, 2015 – Flint has reconnected to Detroit water. reached an agreement with the Detroit Water and Sewerage Department (DWSD) for the temporary provision of treated Lake Huron water to Flint. Work to establish the reconnection will begin immediately in a coordinated effort between the City of Flint, Genesee County and the DWSD.

A tremendous effort by all three partners, along with the efforts of the Governor and the State Legislature, ensured that this action occurred as quickly as possible. "The money from the state to begin fixing Flint water by reconnecting to Detroit is just a start – a down payment,´ said Mayor Dayne Walling. "I am not going to stop until every drop of drinking water in Flint is 100% safe."

Detroit water will be introduced into the Flint system throughout the evening. It is expected that the thorough replacement from Flint River water to Detroit water will happen after approximately three weeks. Residents in Flint may see discoloration as well as noticing some taste and odor issues during the transition.

Water provided by DWSD will contain corrosion control agents to hinder the leaching of lead from old pipes into the water; however, the City will also be adding additional corrosion control agents to further minimize the risk presented by lead pipes.

The contract between the City and DWSD calls for the provision of 12.5 million gallons per day (mgd) of treated water from Lake Huron at a cost of $1.1 million per month. DWSD Director Sue McCormick noted that the talks between Flint, DWSD and the GLWA Board were very cordial: "everyone acted in a spirt of cooperation in order to come to this agreement." Flint will purchase water from Detroit until the Karegnondi Water Authority (KWA) pipeline can be completed in 2016. At that time, the KWA will become the primary water source for the City and the Flint River will remain as a backup system.

Residents with questions or concerns about the hydrant flushing in their area can call the Water Service Center at 810-766-7202. Continuing information on water will be provided via the City of Flint's website, cityofflint.com.

Mayor Dayne Walling Response to MDEQ's Admission of Fault in Flint's Water Emergency

Flint, Michigan – October 19, 2015 – The following is a response from Mayor Dayne Walling regarding the MDEQ's statement admitting fault in the Flint water emergency:

Today, the Michigan Department of Environmental Quality (MDEQ) acknowledges its leading role in the decision-making that led to the contamination of Flint's drinking water. The people of Flint hear this admission and we demand that the State fully fix this problem they caused. While the State taking responsibility and the switch to Detroit water are steps in the right direction for Flint, actions speak louder than words. Now, the Governor and the State need to provide tens of millions of dollars to fix Flint's water and infrastructure as well as to provide for the families, children and schools affected. I will continue to push for changes and advocate for our City until every drop of water is 100% safe.

The MDEQ assured Flint that the switch was being handled safely and responsibly. We relied on the information from MDEQ, and clearly that information was wrong. My heart goes out to the children and families who are affected by this issue.

This morning our local Senator Jim Ananich said the following: "We do not know whether the misapplication of federal rules was intentional or due to negligence. That's why the Legislature needs to have a robust role in any investigation, and in ensuring those responsible for Flint's water crisis are

held accountable." I applaud Senator Ananich's Statement and I urge the Governor and State Officials to take the necessary steps to ensure accountability so that this never happens again to any community.

Good afternoon, Gentlemen.

Please find the City's wire transfer information below.

Bank N
Routin
Acct#:
Accou
Contac

A copy of the outgoing wire transfer confirmations totaling $10 million is attached. The first wire was sent to DWSD on Friday, October 16, in the amount of $2 million. The remaining balance of $8 million was sent on Monday, October 19, in two separate transactions of $3 and $5 million due to max transfer limitations.

Please let me know if you have any questions or if I may be of any further assistance.

Best regards,

Subject: RE: Question for you...

Great to see the Op-Ed, I'm tired of seeing good people getting kicked around without a chance to set the record straight.

Frankly, the everyday Flint citizen has been very poorly served by these folks, and without help the city would have been bankrupt and my guess the problem exacerbated. Every single one of us is very disappointed and disheartened by the lead issue, and no one, especially you and I, thinks lead is acceptable at any level even though the feds recognize that a certain level is to be expected. A regular Flint citizen has every right to be ticked off by the findings, and I certainly don't blame them for being irritated they have this problem, need bottled water and filters, etc., but it's the old pipes that are the problem.

Lead doesn't magically appear or disappear because of the Flint River water, which we all, including you, expressed a lot of reservation about using. But, the river was always the back-up long before EM's and state involvement, and the locals went forward with the same understandings. Frankly, the response to the "dirty" water and the smell obviously precipitated chemical cures which may or may not have facilitated the leaching. Some of the levels will be relieved by the Lake Huron water, but not the essential issue in old cities throughout the country where the only resolution to lead levels is getting rid of old houses with lead issues and old pipes. Quite an undertaking, but without a viable city it could never be tackled.

Subject: Re: Question for you...

Dennis,

I am attending MASB but will get with staff first thing Monday to deal with this issue.

Thanks for your support on the op-Ed. It feels good to have my side of the story out there.

Have a great weekend!

Darnell

John
I think there's an issue with the response filing to the petition for recall. You refer to a switch to Flint river in April 2014. I think the decision to switch was made in 2013.

Subject: RE: request for comment on congressman's letter

I do not believe we should respond to this over the top letter for both legal and philosophical reasons. Responding to this just feeds his narrative. How about we not issue a letter in response? Here's my issues:

1. First paragraph, top of second page. "...additional steps that need to be taken to remediate the damage done to the people of Flint due to the failures at the state government level, alongside the forgiveness of Flint's Revolving Funds loan debt if that becomes available." All of these emotionally charged and essentially unfounded accusations suggest the state's culpability in levying damages to "the people of Flint". There are definitely people in Flint (mostly poor and without many resources but also many other people) struggling with an old system, brown water, lead and unsavory health problems that have been put through several months of alarm and struggle, but let's try to deal with human beings and not political bombast. Let's identify and solve problems. Literally hundreds of state employees have worked night and day to resolve these issues. Are we going to blame state employees indiscriminately when our people were simply trying to do their jobs to the best of their ability and were unable to anticipate (for whatever reason) all the consequences?
2. First bullet point. "...and other state resources such as the rainy day and general funds to repair damage done...". Sorry, but we're not going to commit the general fund to repair "...Flint's water distribution system." What does that mean? And if we sign on to that then where does it stop and what repairs?
3. Second paragraph. "...hundreds of millions of dollars of damage....". Where did this come from? I take it the Congressman is now a self-appointed expert on water systems and their cost?
4. Second bullet. "...the state create a fund for ongoing assistance...." We already have several funds to deal with lead exposure and we have multiple programs, WIC, Medicaid, health endowment, etc. to assist people in need. Why would we create another fund?
5. Third paragraph. "...need for significant investments in the local health system in order to respond....". We already make significant investments in the local system. They were able to identify the danger early and I would assume they will be significant players in the future. Additionally, DHHS has a myriad of programs already in place to assist the local health system, which I don't need to remind everyone is a city owned hospital and for whatever reason never consulted by the city when the KWA conversion was being studied and proposed. That system also never objected nor tested the Flint River before, even though the river was always the city's source backup. Even the proposal prior to the state's involvement considered using two million gallons of Flint River water and that was a public record. But, that's another issue best left to another time.
6. Third bullet. "...rescind Flint's obligation to provide $2 million for the cost of connecting....". The state gave the city $2.1 million to help the water system during the summer, and part of the agreement to get the $6 million from the legislature for the emergency was contingent on Flint contributing a share.

7. Fourth paragraph. "…for the state's failures is an abdication of clear responsibility….". First of all, it's not a state's failures, it is a perhaps avoidable mistake made with the corrosives that was unacceptable to us, the Director and Governor are taking actions to fix the problems, the health and wellness of the people of Flint is our absolute concern, and it's not an abdication of clear responsibility. The "…state-appointed emergency manager was in charge…" may well be accurate for the physical change, but the decision to leave the Detroit system was made when the city, the Mayor, the council, the county, local leaders and the KWA was devised and that was well before the physical change.

For these reasons and others, I'd prefer Sara's general assistance and aid comments and not responding to the letter.

Subject: Re: request for comment on congressman's letter

That's what I suggested; however after given it second thought, I think a simple reply should go something like:

"Thank you for your concerns regarding Flint. I've established a task force of experts who will advise us how to proceed, and I will be more than happy to send you their findings to you."

Best,
Harvey Hollins III, Director

November 13, 2015

Governor Rick Snyder
Executive Office of the Governor
P.O. Box 30013
Lansing, Michigan 48909

Governor Snyder:

I would like to provide you an update with some of the work we are doing in response to your letter on October 2, 2015 letter. I also have three requests of the state that are necessary to provide relief to the victims of the Flint water crisis.

First, Senator Stabenow, Senator Peters and I wrote a letter to the U.S. Environmental Protection Agency (EPA) asking for clarification on whether federal law permits states to use Safe Drinking Water State Revolving Funds (Revolving Funds) to finance the replacement of privately owned lead water service lines (attached). The EPA responded that the Revolving Funds can in fact be used for this purpose. My office immediately notified both your office and the Michigan Department of Environmental Quality of this fact.

Secondly, the three of us also wrote to Secretary Tom Vilsack requesting that the U.S. Department of Agriculture (USDA) provide greater clarification on the availability of "Ready to Feed" formula for recipients of Special Supplemental Nutrition Program for Women, Infants and Children (WIC) in Flint. Additionally, the letter asks to identify resources to improve the nutrition of Flint residents specifically as it relates to lead, because a certain diet can reduce some of the impact of exposure. The USDA is currently reviewing the letter.

Third, I have been working with the EPA on important revisions to the Lead and Copper Rule that would prevent a public health crisis like the one in Flint from happening again in other communities. I will be providing testimony at a meeting of the National Drinking Water Advisory Council next Wednesday, November 18 on what we have learned firsthand in Flint and the necessary improvements to the Lead and Copper Rule.

I will continue to pursue all of these avenues in order to find assistance for the people of Flint. There are, however, additional steps that need to be taken to remediate the damage done to the people of Flint due to the failures at the state government level, alongside the forgiveness of Flint's Revolving Funds loan debt if that becomes available. I urge state and local partners to work in coordination to fulfill the following requests.

- First, I request that the state of Michigan use its Revolving Funds and other state resources such as the rainy day and general funds to repair the damage done to Flint's water distribution system.

Due to the corrosive nature of the water, conservative estimates show there has been hundreds of millions of dollars of damage done to Flint's water distribution system. The damage to the system will increase maintenance costs resulting in higher rates for Flint water users, who already are burdened by the highest water rates in the state. Furthermore, the presence of over 15,000 lead service lines continues to threaten the quality of the water and creates the potential for future lead exposure through drinking water. As stated previously, the EPA has said that using the Revolving Funds for this purpose is allowed under federal law, and I request the state do so.

- Second, I request the state create a fund for ongoing assistance to the people of Flint to respond to the impacts of lead exposure.

The effects of lead are serious and permanent, with especially harmful impacts on young children and those with weakened immune systems. In discussions with health professionals, they have expressed the need for significant investments in the local health system in order to respond to the widespread exposure of lead to the people of Flint, including monitoring of future lead exposure. This fund should include support for, at a minimum, continuous health monitoring, early education programs, nutrition education, support services for children to succeed in school, and continued exposure prevention efforts. The investments we make now to combat the negative impacts of lead exposure will pay dividends in avoided costs in the future.

- Finally, I again ask that the state immediately reverse course and rescind Flint's obligation to provide $2 million for the cost of connecting to the Detroit water system and refund any money the city of Flint has had to pay.

Requiring a financially distressed city and its people to pay for the state's failures is an abdication of clear responsibility by the state. The state-appointed emergency manager was in charge of the city of Flint during the time that the decision to leave the Detroit system was made. The state – not Flint – created this water crisis, and the state needs to pay to fix it. The $2 million Flint spent to reconnect to the Detroit water system could be used for many other essential services in Flint, such as hiring policemen and firefighters, improving schools and maintaining parks.

In addition to state investments, I encourage the state to request assistance from federal agencies. They have extensive experience working with health, education and nutrition systems nationwide and could provide critical resources to state officials. Specifically, the Centers for Disease Control and Prevention has offered resources if the state requests it. I will work to support any efforts for federal assistance the state makes.

I look forward to working with the state and federal governments to not only provide clean drinking water to the people of Flint immediately, but also repair the damage done to the city's water system and give local health professionals the resources they need to combat the long term impacts of lead exposure.

Sincerely,

Dan Kildee
MEMBER OF CONGRESS

Subject: RE: Flint water

I don't remember what the phone call was about, obviously Flint alternative water supplies. But, it is not the call where you told me you were going to approve the switch. I know which date that was and it wasn't this one.

As for the decision making on the switch, as I remember it, the Flint people demanded you go to KWA. They (as I remember you indicated Curtis, the Drain Commissioner, Gleason, Emerson and United Way Brown?, thought it would serve the city best in the long run to get out of DWSD. I remember you agonized over it and questioned the switch in several different conversations. Ultimately you felt that the city would be back under local governance in the future and if that's what they wanted you understood their concerns. I also seem to remember discussions about the County Commission wanting the switch and their advocacy in the switch as well as the Flint labor Council. It's a long time ago, and I don't have any notes on it as we had at least five or six conversations on this, but I think this sounds correct. You were acting as State Treasurer but really keeping us plugged But, I could have the specifics on this wrong....

Hi Andy: Why did the state and city opt to go with KWA for Flint water supply when the study you commissioned from Tucker, Young, Jackson, Tull found that going with KWA would be more costly than staying with DWSD? (Here is excerpt from p. 17):

"Based on the analysis, it is prudent to assume the KWA water supply option costs would be somewhere between the KWA-1 and KWA-2 options. Therefore, the analysis indicates that the two DWSD options of supplying 8 MGD on a maximum day and up to 8 MGD on average are the least cost options for Flint. These options allow Flint to maximize the use of existing assets; the City of Flint's (the Flint WTP) and DWSD's (the existing 72-inch main)."

How would you describe your role in the chain of decisions that led to Flint drawing its water supply from the Flint River?

The Flint City Council opted to go with the KWA on the evening of March 25, 2013. Your schedule shows you had a 5 p.m. phone conversation at 5 p.m. that day with Dennis Muchmore "regarding Flint Water Supply alternatives."

The next day, March 26, 2013, your schedule shows a 9 a.m. meeting at Treasury "regarding Flint water, a 1:30 p.m. phone call with Dan Wyant "regarding Flint/KWA," and a w p.m. meeting in Lansing with Flint Mayor Dayne Walling?

What do you recall about these conversations/meetings? Did Muchmore sign off on the switch to KWA on behalf of the governor?

Thanks, Paul Egan

Mayor Karen Weaver Declares State of Emergency

Flint, MI – December 14, 2015 – Mayor Karen Weaver has declared a State of Emergency in response to a man-made disaster caused by the City switching to the Flint River as a water source. This switch has resulted in elevated lead levels in drinking water which prompted both the City and the County Health department to issue a health advisory earlier this year.

Mayor Weaver states that this was one of the things she had promised to do while campaigning for mayor.

Declaring an emergency intends to help raise awareness of the issue that the water is still not safe to drink and activates the City's Emergency Support Plan in order to respond to the crisis.

On October 16 of this year, the City switched back to the Detroit Water and Sewerage Department as the source of water, however lead levels remain well above the federal action level of 15 parts per billion in many homes. Residents are advised to continue using water filters while long term solutions are being developed.

The Mayor will hold a press conference about the State of Emergency on Tuesday, December 15 at 2pm at City Hall.

END

6) Water Transition Plan, Negotiations, Communications

DEQ is in final review for COF permit to temporarily store spent lime from water treatment plant – needed for full river water operation. Negotiations have begun with the GCDC and KWA for purchase of existing water pipe and back up plans.

Equipment timing for water plant on schedule.

4) Financial Update

a) City met Friday 2/27/14 with E&Y to review progress on Hurley, and the 5 year projections. Hurley is in draft form. The 5 year plan should be completed in a couple of weeks. Also, reviewed draft of RFC analysis and recommendations regarding the water and sewer rates.

b) Treasury when will we get approval of the budget amendment? As we go into KWA financing, we are proceeding as if the amendment is done. That is important because the amendment maintains the $1million in deficit reduction. Nearly 2 weeks and we are still awaiting a response.

c) Treasury, please respond whether draft deficit elimination plan is credible.

d) Need some assistance in getting the Administrative Consent Order through the DEQ so Karegnondi Water Authority can get their bonds issued.

4) Financial Update

a) Deficit Elimination Plan – S. Schafer found no accounting concerns. COF is intending to proceed along lines of DEP as we await formal approval.

b) Approval of the budget amendment still pending – 4 weeks. Because of Water Treatment Plant update expense and timeline, we are proceeding as we await formal approval of the amendment. That is also important because the amendment maintains the $1million in deficit reduction.

c) Thanks to Treasury for assistance in moving Administrative Consent Order through the DEQ, however the process is still moving slowly. ACO is still not approved.

d) Update on E&Y contract: held a phone conference with Treasury about Hurley, Water and Sewer study and their update of the 5 year financial projections.

Not Responsive

Not Responsive

7) **Water Issues**

The Water Plant held a ceremonial ground-breaking for the update to the water treatment plant in preparation to transition to Flint River use as drinking water source.

We will know by the first of next week the certainty of being on the river in April.

We are currently in negotiations with GCDC on purchase of pipeline. COF is making counter-proposal on sale of pipeline (using $4million appraisal value). Need to know Treasury will approve sale using this appraisal.

c) Water Treatment Plant – Resolutions authorizing contractors approved by Treasury. Frost conditions and easement issues with Consumers Energy may impact completion date, but are being addressed. DEQ ACO has been approved. Awaiting approval of Construction Permit, discussions with Water and Solid Waste Divisions ongoing. Must be resolved this week or significant delay with project could occur.

Not Responsive

Not Responsive

6) **Water Issues**

a) Water Issues – DEQ permits are expected to be received this week. Consumers Powers easements issues are being addressed. However, termination of water service from DWSD may be delayed. Awaiting confirmation of terms from DWSD by which water will continue to be purchased from DWSD – presumably the terms outlined in their February 12, 2014 letter. Delay *could* be a matter of weeks, but certainly no later than June 30, 2014.

b) Negotiations with GCDC continue with regards to sale of the pipeline section. COF current proposal is for $3.9 million sale price, the value established in recent valuation. Valuation has been submitted and reviewed by Treasury. Submission to Treasury for approval is anticipated prior to ending relationship with DWSD. Also, COF is negotiating back-up service agreement for GCDC for period between DWSD termination and KWA start-up.

c) Water and Sewer Rate Study – the final draft is due shortly and will be reviewed with the Public Works Committee on April 10.

7) **Water Issues**
   a) The City Council met twice to discuss the sale of a 9 mile section of unused pipeline to the GCDC. The City had negotiated a sale price of $3.9 million. Council first voted to reject the sale. A second meeting resulted in a vote to sell the pipe section for $3.9 million but receive the funds in two payments over two fiscal years. It is unknown if the City council made a submission of this proposal to the local emergency financial assistance loan board. Does Flint have Treasury's approval to execute the contract of sale?

7) **Water Issues**
   a) Glenn Acres – water turn-on order from Judge Hayman. Judge has put complex in hands of a receiver.

b) Limited area boil-water notice – resolved.
c) General Motors Water Issues – resolved. However, if this should become an issue for the GCDC with DWSD we would hope Treasury will be supportive of the GM-GCDC franchise customer agreement.

7) **Water Issues**
   a) Flint will continue to investigate why conditions develop which are favorable for more severe problems to occur. Pursuing these investigations may include seeking additional professional assistance to review both systems and processes. Whenever hydrants are

running to clear lines: new signs are posted to show intended water running. Major line breaks are announced through a press release and include estimated time to resolve.

b) General Motors Water Issues – working through lawyers at this point. We are close to a final agreement regarding their level as a customer with the City of Flint.

City of Flint Strategic Plan

Quarterly Report

July 1, 2014 – September 30, 2014

CITY OF FLINT

OFFICE OF THE EMERGENCY MANAGER

Darnell Earley, ICMA-CM, MPA
Emergency Manager

DATE: October 10, 2014

TO: Scott Kincaid, President, Flint City Council
City Council

FROM: Darnell Earley, Emergency Manager
Dayne Walling, Mayor

RE: City of Flint Strategic Plan, First Quarter Report

Earlier this year, the City Council of Flint adopted a Strategic Plan for the City of Flint. This Plan announced a Vision, Mission, and Goals to guide the operation of the City government for the next five years, and was adopted in the context of the City's recently adopted Master Plan for the community. It was followed by a statement of budget priorities adopted by the City Council, and ultimately by a biennial budget for FY15 and FY16. The budget also projected the City's finances for the following three years – FY17, FY18, and FY19. During this same period a Deficit Elimination Plan and Reserve Accumulation Plan was approved by the State and a Seven Point Transition Management Plan was enacted to guide the way by which the operation of the City will be assumed by the Mayor and City Council . The integration of the Strategic Plan into the organizational processes of the City is a key component of the Seven Point Transition Management Plan.

In total, these actions comprise a broad framework guiding the direction of the Flint City government as it restores financial stability and once again becomes an active leader focused on making Flint a safe, secure city attractive to residents, businesses, students, and visitors.

The first quarter of FY15 ended on September 30, 2014. We are pleased to report on the progress which has been made. While significant progress has been made on many fronts, significant challenges and risks remain.

We wish to commend the Management Team and our employees for their dedicated efforts to move the City forward. We look forward to discussing the contents of the report with you.

Overview

The City of Flint has a vision and a plan and now it is focused on implementation in order to achieve a stronger and financially sound municipal government along with a safer and more stable community. To succeed, however, City leaders must follow the plan with discipline and commitment. They cannot stop halfway or leave work half-done—and everyone has an important role to play. Working together as a team, the City of Flint has been successful in the previous quarter in increasing public safety, improving infrastructure, creating jobs and development, eliminating blight, engaging citizens and managing financial and administrative challenges. Areas of success include:

- Law enforcement is working hard with growing community support and total homicide victims is down 18% compared with 2013.
- Utilities is managing with an eye toward the future and the construction of the KWA pipeline is underway, on time and within budget.
- Development activities have increased with new facilities under construction at GM Flint Assembly, on the Buick City brownfield site with American Pipe, and downtown in the Health and Wellness District.
- Blighted properties continue to be eliminated, using state and federal funds, and neighborhood volunteer groups have removed more than 2 million pounds of trash in major clean-up efforts.
- The General Fund deficit continues to be reduced, and the City's financial position is stabilized at least for the near term. Preliminary projections show the deficit as of June 30, 2014 to be $9 million, a reduction from $12.9 million the previous year.
- Revenues and expenses for the first quarter of FY15 are in line with expectations.
- Internal restructuring of the City continues at it strives to become efficient, effective, and customer service focused in an environment much smaller than in the past.
- The transition from state oversight to traditional home rule is underway, guided by the Seven Point Plan recently enacted. If progress continues as anticipated, the next step in transition will occur in 2015.

Challenges also continue. The transition from DWSD to the Flint River for the City's temporary supply of water until KWA is complete has occurred; however, the work of producing treated water has been complicated by the system's aging infrastructure and varying temperatures. A badly needed update to the City's web site is underway; progress has been delayed from initial completion targets as the selected vendor was unable to perform necessary tasks. The retiree lawsuit, whose outcome can seriously affect the financial solvency of the City, remains unresolved. Work continues to get done under difficult circumstances with limited resources, however the new strategic planning process is improving the City of Flint's productivity, responsiveness and accountability.

Assuring Accountability to Adopted Plans and Budget

The Strategic Plan for FY15-FY19 and the Biennial Budget for FY15 and FY16 charts the course for the Flint City government as it emerges from near financial insolvency and establishes itself as a municipal government providing residents, businesses, students and visitors public services in a customer friendly and financially responsible manner. Near term steps for achieving this have further been defined by a set of priorities set by the Mayor and City Council as the biennial

budget was adopted. Likewise, the Master Plan for a Sustainable Flint, adopted in October 2013 by the Flint City Council and the Flint Planning Commission, provides the framework for ongoing efforts to improve the community as a whole.

Achieving the outcomes desired will be a lengthy and ongoing process. Specific steps to move along this course have been outlined in a series of objectives to be accomplished over the next several years. The purpose of the quarterly report is to hold the City of Flint government accountable to the highlight progress as well as to identify areas of weak performance. The first quarter of FY15 ended on September 30, 2014, and progress has been assessed.

Highlights

Increasing Public Safety

A primary goal of the City is to assure a safe, secure, and healthy environment in which to live, work and play. Well-functioning police, fire and emergency response systems are essential to achieving this. While challenged significantly with less than adequate resources, progress has been made to improve public safety, thanks in part to the assistance and collaboration of the State Police:

- Incidence of Part One crime is down 13%, including a 28% reduction in the number of homicides.
- Response time for police and fire has been decreased
- The decision has been made that the City will rejoin the Genesee County 9-1-1 Consortium. Anticipated to occur by July 1, 2015, this action will result in enhanced service with access to updated technology and will provide some $1 million annually in reduced costs.
- Internal reorganizations and process improvements have been made in the Police and Fire departments to accommodate the reduced staffing made necessary by the City's financial condition. With the assistance of financial assistance from the state, the City is engaged in a comprehensive review of its police and fire structure to determine the most efficient and effective organization for the future.

Improving Infrastructure

A key goal of the City is to provide access to dependable and affordable water sewer, and waste. Another key goal is to assure an adequate and well maintained transportation network. The financial challenges of the past several years has left the City with significant need for reinvestment in virtually all of its infrastructure. While the challenge is enormous, positive steps have been taken:

- The first draft of the City's first comprehensive Capital Improvement Plan has been completed and will shortly be shared with the public for its input.
- The City has recently been notified that it will receive $750,000 in funding for roads, as contained in the new State budget. Planning for use of these funds is beginning, with the expectation that it will be used for badly needed road repairs in the spring.

- The construction of the KWA pipeline is underway, on time and within budget. The transition from DWSD to the Flint River for the City's temporary supply of water until KWA is complete has occurred; however, the work of producing treated water has been complicated by the system's aging infrastructure and varying temperatures.
- Concerns regarding the cost of water to Flint residents and businesses remains a high concern. Investigation of sources of water loss – both from theft and pipe leakage is ongoing. Reports of theft have resulted in criminal investigations, which are significant and ongoing. Several criminal complaints have resulted from the investigation and more are anticipated. Comprehensive programs of water meter replacement and leak detection are being developed.
- Construction will begin in October of a load out facility that will allow the city to shut down the incinerator and realize up to $400,000 a year in operational savings in the sewer fund.
- Investments in the underground utilities infrastructure are being finalized, utilizing budgeted funds for pipe replacement, pipe lining, and installation of technologically advanced water meters.
- Work is being planned to address the condition of city facilities. A contract has been signed to repair the employee and police parking lot and to replace the lighting with LED lights, while a process for evaluating potential energy savings at the Municipal complex is being finalized.

Creating Jobs and Development

One of the goals in the recently adopted Master Plan is to have a growing and diverse economy that spurs innovation and small business development along with an education system that prepares our workforce for jobs paying a livable wage. The Strategic Plan likewise commits the City to foster cooperation between businesses, higher education and medical institutions, nonprofit organizations and community groups to create jobs and development. It also identifies the need for the City to better define the role of the public sector in economic development and also to improve the business climate.

A number of business and community development initiatives are underway across the city.

- Development activities have increased as evidenced by revenues collected from building permits and rental inspections. These revenues are currently projected to exceed budgeted revenues by $300,000 by the end of the fiscal year.
- Increased capacity for compliance with the City's Rental Registration Ordinance is being put into place. A contract for services has been executed, with inspections planned to begin before November 1.
- A new Medical Marijuana ordinance has been enacted. Application forms and related materials are being developed.
- Aggressive pursuit of funding for specific projects promoting development has resulted in more than $4 million to the City, including some $2 million for the redevelopment of Chevy Commons, $1.6 million for reconstruction of Dupont Street. Other grants have been awarded for a revitalization plan the South Saginaw corridor, road diet and bike lanes for Harrison Street, and an analysis of housing for the downtown area.

- Smith Village Development - Of 39 new homes built, 21 have sold, there are six purchase agreements, and 12 are remaining to be sold.
- Gundry and Salem NSP1 Purchase-Rehab-Resale – 14 homes were rehabbed, there are seven purchase agreements, and one home has been sold. Six of the 12 deeds that are in litigation with a previous developer by order of the Court.
- 26 units of senior apartments were made available with the ribbon cutting of Oak Street Apartments, a repurposed closed school building. Renovation was kick started with City of Flint CDBG demolition funds.
- An assessment of the development capacity of Flint's network of Community Housing Development Organizations (CHDO) and Community Development Corporations (CDC) has been completed in partnership with Local Initiatives Support Corporation (LISC). A planning is now underway to determine how the network can support implementation of the city's Master Plan and Blight Elimination Framework.
- In partnership with the local community foundation, public library, community college, and non-profits, began a six month community planning process where over 200 volunteers and stakeholders will create a well-coordinated, integrated system for literacy service delivery that increases literacy levels through a well-managed coalition of organizations.
- The $2.3 Million Community Development Block Grant (CDBG) programming allocation has been implemented. This allocation supports $928,000 of blight elimination, $725,000 in housing rehabilitation and emergency repairs, $227,000 to increase literacy, $124,000 for victim advocacy and fair housing and $184,000 in youth initiatives.

Improving Parks

Encouraging partnerships for recreation and access to open space across the City is a key goal of the Strategic Plan. While City support of its park system has been minimal for the past several years, positive steps, and the creation of partnerships in particular, have been taken towards achieving this goal:

- All City parks are being mowed at least twice per month, and their progress monitored on a regular basis
- Partnerships have been formalized with the Crim Foundation for Basset Park; with Friends of Rollingwood for additional park improvements; with Genesee Conservation District for forestry services; and with Mott Community college for Kearsley Softball Field and the Longway Greenbelt.
- A partnership with Mott Park Association for golf course and clubhouse is being developed.
- Substantial progress on park improvements are occurring at Max Brandon, aided by $200,000 in grant funding.
- Grant funding has also aided improvements at McKinley, and fostered progress on the Grand Traverse Greenway.
- Other improvements are occurring at Thread Lake and Flint Park Lake through the Genesee County Parks Partnership.

- The City is working in partnership with stakeholders at Whaley, Berston, Dewey, Kearsley, Hasselbring and Brennan Parks to leverage additional funding and volunteer assistance to construct further improvements.
- The Senior Center leases have been completed for Hasselbring and Brennen, assuring that senior citizen programming will continue in the City.

Eliminating Blight

Eliminating blight within the next five years is one of the objectives incorporated into the Master Plan, and is recognized by the City as being critical to creating and maintaining a vibrant and growing community. To date:

- A draft Blight Elimination Framework has been developed and widely circulated for public input, reaching approximately 400 residents who have committed to its implementation. The City has committed to organizing its resources around this plan and has appropriated approximately $928,000 for blight elimination activities including the development of a code enforcement program, demolition, and coordination of extensive neighborhood clean ups.
- Several hundred citizen volunteers, working with Cities of Service, Clean & Green, and many neighborhood associations, have spent countless hours on many projects, including removal of more than 2 million pounds of trash from blighted areas, boarding of 575 vacant properties, and mowing some 12,500 properties a total of 28,000 times.
- Over $900,000 in CDBG allocations has been contracted to the Genesee County Land Bank for demolition of approximately 70 commercial and residential structures.
- $2.6 million in Hardest Hit funds were recently allocated to the City in partnership with the Land Bank to demolish some 225 homes in Civic Park. This funding is in addition to the nearly $23 million of both Michigan Blight Elimination and Hardest Hit Grant Funding for demolition of approximately 2,000 debilitated homes. The City has completed more than 1,500 Cut and Plugs in preparation for scheduled demolitions.
- An average of 240 Code Compliance issues are addressed monthly by the City's Blight Elimination Manager. 80% of these are resolved without further code enforcement action.
- The City has recruited 2 AmeriCorps VISTAs volunteers who will start in November and focus on implementation of the Blight Elimination Framework.

Engaging Citizens

An engaged citizenry is essential to creating and maintaining a vibrant growing community. Citizen engagement in Flint increased significantly over the past few years as the City engaged them in the development of the Master Plan. Master Plan implementation has continued to engage citizens, as have other activities fostered by the City:

- All Master Plan Implementation Task Groups have met twice, working on individual actions plans. The City will also be working with 41 neighborhood groups who have

been trained on assessment work and will complete the neighborhood inventory for housing and street lighting by mid-November.

- The Police Department has engaged citizens in several ways, including increased participation by its command officers in community meetings, and by partnership and participation in APLACT (Advocates and Leaders for Police and Community Trust).
- The Department has also expanded use of Blue Badge volunteers in many areas, such as the newly established Citizens Radio Patrol.
- The department also become an active user of social media, promoting Crime Stoppers and Operation Fresh Start, and creating a presence on Facebook and Twitter.
- The Fire Department has also increased its presence in the community through its "Knock and Talk" initiative.
- Citizen engagement has also been enhanced with the placement of national service teams in the City of Flint, one from the National Civilian Community Corps and one from VISTA. More than 800 volunteers have been engaged with these teams on various projects, including removal of more than 2 million pounds of trash from blighted areas, emergency preparedness education for more than 900 residents, and participation in the national day of service on 9/11.

Managing Financial Challenges
